GLC150 Series Stand-Alone HMI Graphic Logic Controllers

LT Series(GLC150) Product Summary:

These units are intended for low cost stand-alone HMI Controller applications.

Some models feature a Flex Network interface, which support the various FN-xxxx distributed analog and discrete I/O modules. Combine GLC150 units supporting a Flex Network interface along with any combination of the FN-xxxx modules to match the I/O requirements of your application.

The GLC150 units are well suited to simplify a control panel design while maintaining system flexibility. The majority of these units include 16 discrete inputs and 16 discrete outputs. Various models as shown in the table below are design to match OEM machine requirements with emphasis on reducing wiring and installation time. Significant savings is achieved with the GLC150 units due to integrating the graphic touch screen, built-in I/O, and logic control all in one unit.

These units are not recommended for applications with data collection or data logging requirements.

AGP3000 Multimedia Features

Multimedia: A new world of possibilities for HMI developers

Now you can do what you always wanted to do:

- **Capture the moment**
Record the events that lead to machine breakdown
- **Create online audio/video machine tutorials.**
Keeps the operator trained with latest procedures
- **Record and play back audio**
Leave audio messages or instructions for next shift operator
- **Reduce downtime**
 - Use the movie converter software for instructor-type maintenance procedures
 - Use video cameras for remote monitoring and troubleshooting machines

**Make a good impression –
Enhance the operator interface experience.**

Event recorder

III You can record video and audio from a video camera connected to the built-in AGP3x50 multimedia ports. Store files on CompactFlash or place on FTP server connected to the AGP unit via Ethernet.

When a predefined event is triggered, video before and after the event (max. 120 sec.) is automatically recorded and stored as a log.

Fast & accurate troubleshooting

Movie file playback

III You can use the display of the AGP3000 to play back movie files. Simply select the desired files from a CompactFlash card or FTP server. You can also loop a series of movies.

It's easy to add movies to on-site instruction screens for better comprehension.

And now, you can create movie files with commercially available video software.

Note: Movie files you create must be converted with the Movie Converter EX converter tool, which requires the purchase of a license.

Video mix unit connection

III With a VM unit (optional), visual monitoring of work details and conditions on the production site is available in real time. Up to four cameras can be connected, with all four images displayed simultaneously on one AGP3000 screen.

Note: Not all models can connect the VM unit.

GP can control a PC by displaying the PC screen on GP by using a VM unit.

RGB input (for display)

Serial communications (for mouse emulation)

Note: Downloading Touch Panel Driver is necessary.

I/O Expansion Options

Expand the reach of your HMI operator interface

Need some extra I/O? Now there's no need to buy an extra controller when you just need a few more I/O points. The AGP3000 Series of HMI operator interfaces includes models that feature built-in discrete I/O. Or, expand to a distributed I/O network by choosing a model with the optional flex network interface. The choice is yours. Either way, you'll save money with these cost-effective options.

HMI Control With Integrated I/O

DeviceNet™ Master Module

This communication module adds DeviceNet™ Master capabilities to a GLC2000 unit, and uses IEC 61131-3 compliant ladder logic to control I/O

The DeviceNet™ Master Module is a cost-effective way to control a DeviceNet™ network. The GLC is a low-cost controller and HMI all-in-one box solution. By adding the Master Module to a GLC2000 Series unit, you get a popular distributed I/O architecture that will add functionality and enhanced performance. Now you can put your controller (with touch screen) in a convenient location, and take up less space in your cabinet. One device to mount means quicker installation time. One software package programs both the screen graphics and ladder logic, thus saving time. Also, reduce application development errors by using drag-and-drop variable names from the logic editor to screen graphics.

FEATURES

- Compatible with all GLC2000 models
- Mounts on back of HMI unit
- LED indicators for Network Status
- Easy to Configure - no software needed
- Ideal for Distributed I/O Applications
- Communication Types Supported:
 - Polled
 - Strobed
 - Change of state
 - Cyclic
- DeviceNet™ Conformance Tested
- Electronic Data Sheet support and sharing
- Supports 63 DeviceNet™ nodes:
 - Each node can have 48 words or bits
 - Up to 1008 words or bits max per node

EASY SCREEN CREATION & LOGIC PROGRAM DEVELOPMENT

Screen Editor and Logic Program Development Software

GP-PRO/PBIII-© Package 03

GPPRO-CNT01W-P03

The GP-PRO/PBIII C-Package combines screen creation and logic programming capabilities into one handy package. Using the simple "settings navigator," even beginners can create easy-to-use operating environments.

EASY SCREEN CREATION

Time Scheduling

This function makes it easier to set up devices and handle routine tasks.

Bit On/Off and word setting can be scheduled by day of the week or for a specific time. The weekly and time setting can also be changed on the display device.

Security Level Function

Restrict user access depending by operator level.

Use the 15-level password protection function to restrict access to specific screens, such as management and maintenance screens. This protection function helps to improve screen security, which also means greater safety for machines that are unattended or installed off-site.

Improved Keypad Display Function

We expanded the setting parameter display function for more efficient on-screen input.

- Touch input for input mode activation.
- A sequence designation function for inputting multiple items (with the group function).
- Designation of the change notification bit for individual setting parameter displays.
- A more flexible arrangement for the popup keyboard.

Text Screen's Multi-language Function

The text screen now supports multiple languages. A and X tags can be used to display different languages.

Improved Editing

Expanded Alarm Summary Display Function Using Q Tags

LOGIC PROGRAM

Supports Ladder Monitor

Current values and set values can be changed from the display screen.

Additionally, because the current values/set values can be altered not only from the ladder monitor but also the display screen, the contact point's ON/OFF and timer/counter's tuning can be performed even if a computer is not available.

Add New Instructions

15 kinds of ladder instructions, such as arithmetic functions, have been added. This makes developing programs much easier.

*Supported by GLC2000 series only (except for GLC2400/2600's old revisions.)

Command Extensions	Type
SUM	Sum (Returns total value of input array)
AVE	Average (Returns average value of input array)
RCL	Left Rotation with Carry
RCR	Right Rotation with Carry
SAL	Arithmetic Shift Left
SAR	Arithmetic Shift Right
BCNT	Bit Count
ASIN	Arc Sine
ACOS	Arc Cosine
ATAN	Arc Tangent
COT	Cotangent
EXP	Exponent e(x)->y
LN	Natural Logarithm Loge(x)->y
DEG	Degree Conversion (Radians ->Degrees)
SQRT	Square Root
RAD	Radian Conversion (Degrees ->Radians)

More Convenient to Operate

Inserted commands and variables are graphically displayed, making ladder programming mistakes easy to avoid.
