Specifications

Materials	Block Housing	Nylon 6-6
	Clamp	Zinc-plated steel with chromate film
	Bus Bar	Zinc-plated steel
	Screws	Zinc-plated steel with chromate film
Temperature Rating	Ambient Temperature	-40 to 221 °F (-40 to 105 °C)
Flammability Rating	Gray Blocks	UL 94V-0
	All other colors	UL 94V-2
Dielectric Strength		80 kV/mm

Box Lug Termination

Spring Clip Termination

Insulation Displacement Termination

1 - Terminal Blocks, Type AB1
General Overview

	Page
Product description	1/2
Characteristics and specifications	1/6
Product certifications	1/8

General

All electrical equipment or installations require the connection of cables or wires to ensure the flow of very low to very high currents.

Depending on the application, there are several types of connection:

- Spring terminal
- Screw terminal
- Insulation displacement

New spring technology terminal blocks

Description of new terminal blocks AB1RRN

The new AB1RRN terminal blocks use spring technology, the most cost-effective connection technique on the market. Compared with screw clamp technology, this technique significantly reduces wiring time. It could also eliminate the need for regular retightening.

By virtue of their spring technology, the AB1RRN terminal blocks offer the versatility of accepting:

- Stranded wire
- Stranded wire with cable ends
- Solid wire

The material used (polyamide 6.6) provides better resistance at high temperatures. The flammability rating of these products is V0 according to UL 94.

Advantages of this technology

Spring technology offers the following advantages:

- Resistance to vibration and jolts
- Wide range of wire sizes
- Possibility of distributing the potential with use of jumpers
- Several surfaces available for marking
- Possibility of testing all the terminal blocks
- Numerous certifications (see the tables beginning on page 1/10).

Connection functions

The following products are available, depending on the application:

- Passthrough
- Grounding
- Disconnect
- Double deck disconnect
- Plug-in disconnect
- Double deck
- Double deck for grounding
- Double deck with vertical connection

Installation of AB1RRN spring technology terminal blocks

Installation of spring technology terminal blocks is quick and simple. A screwdriver is used to open the connection point so that the conductor can be inserted into the cage. As soon as the screwdriver is pulled out, spring pressure automatically makes the contact.

Terminal block type AB1RRN

Principle of spring technology

Simplified installation

Marking facilities

Testing and adaptation

Interconnection by jumpers

Interconnection by
potential distribution terminal block

New spring technology terminal blocks (continued)

Mounting accessories

The AB1RRN range includes a series of accessories, which allow:

■ quick and easy marking

The availability of clear and legible marking facilities is essential for completing an installation in a minimum amount of time. The AB1RRN range allows easy marking in the center and on the sides of the products **1**.

■ testing and adaptation

Each terminal block in the AB1RRN range can be fitted with a test plug in direct contact with the conductors **2**.

With modular test connectors **3**, on the other hand, test adapters can be assembled individually; they also provide a marking facility.

■ interconnection of the terminal blocks

Insulated jumpers (2- to 10-pole) make it possible to jumper a large number of terminal blocks **4**; this significantly reduces wiring time.

You can also interconnect terminals with a large wire size (16 mm²) and those with a small wire size (2.5 and 4 mm²) via the potential distribution terminal block **5**.

Typical scheme of a spring connection with its accessories

The following accessories can be used with AB1RRN terminal blocks:

- | | | | |
|---|--|----|--|
| 1 | 2.5 or 35 mm DIN3 rail
(7.5 and 15 mm high) | 9 | Insulated jumper |
| 2 | Plastic end clamp with screw | 10 | Wire guide entry strip |
| 3 | Metal end clamp with screw | 11 | Modular test connector |
| 4 | Clip-on plastic end clamp | 12 | Modular test connector end
plate (gray) |
| 5 | Marker tag holder for clip-on plastic end
clamp | 13 | Test plug (red) |
| 6 | End plate (thickness 1.5 mm) | 14 | Terminal cover |
| 7 | Partition plate (thickness 1.5 mm) | 15 | Marker tag holder |
| | | 16 | Marking accessories |

Terminal block type AB1VV

Principle of screw clamp technology

Screw clamp technology terminal blocks

Description

AB1VV screw clamp technology terminal blocks are well known and widely used throughout the world. They are suitable for the vast majority of connection applications, thanks to their wide range of functions and connection options.

AB1VV terminal blocks improve the quality, safety, and operational availability of equipment. They also optimize the setup and operation of installations, thanks to their simplicity and integrated functions.

The material used (polyamide 6.6) provides better resistance at high temperatures. The flammability rating of these products is V0 according to UL 94.

Advantages of this technology

Screw clamp technology offers the following advantages:

- Numerous connection functions
- Wide range of wire sizes
- Several surfaces available for marking
- Test facility
- Numerous certifications (see the tables beginning on page 1/10).

Connection functions

The following products are available, depending on the application:

- Passthrough
- Grounding
- Blade disconnect
- Fused disconnect
- Disconnect (removable carrier), for diode, resistor, or cylindrical fuse
- Disconnect (fixed carrier), for diode, resistor, or cylindrical fuse
- Fixed carrier, for cylindrical fuse
- Double deck, multi-pole
- Double deck
- For 3-wire proximity sensors
- Multifunction
- For neutral conductors
- Passthrough with Telequick universal foot
- Lug-lug type
- Lug-clamp type
- Miniature passthrough

Mounting accessories (for AB1VV screw clamp terminal blocks, 2.5 mm²)

The following accessories can be used with AB1VV terminal blocks:

- | | |
|-------|---|
| 1 | 25 or 35 mm DIN3 rail (7.5 and 15 mm high) |
| 2 | Plastic end clamp with screw |
| 3 | Metal end clamp with screw |
| 4 | Clip-on plastic end clamp |
| 5 | Marker tag holder for clip-on plastic end clamp |
| 6 | End plate (thickness 1.5 mm) |
| 7 | Partition plate (thickness 1.5 mm) |
| 8 | Jumpers with screws |
| 9 | Jumpers for 2 blocks |
| 10 | Socket for test plug |
| 11 | Test plug |
| 12 | Terminal covers |
| 13/15 | Marking accessories |
| 16 | Yellow partition plate |
| 17/18 | Yellow protective cover |

Terminal block type AB1AA

Principle of insulation displacement technology

Installation of insulation displacement technology

Insulation displacement technology terminal blocks

Description

AB1AA terminal blocks use insulation displacement technology, which eliminates the need to strip wires prior to assembly.

AB1AA terminal blocks are made of polyamide 6.6, the same material as screw and spring terminal blocks.

Two widths are available :

- 5 mm for a wire size of 18–30 AWG (0.2–1 mm²)
- 6 mm for a wire size of 14–18 AWG (1–2.5 mm²)

Various colors are available—red, blue, black, and yellow/green—depending on the application where the terminal block is used.

Advantages of this technology

Insulation displacement technology offers the following advantages:

- Fast installation: 60% time savings
- No need to strip or crimp wires
- No special tools required
- Resistance to vibrations, since the technology does not rely on screws that can come loose

Connection function

The following products are available, depending on the application:

- Passthrough
- Grounding
- Double deck
- Blade disconnect
- Plug-in disconnect

Installation

Installation of these terminal blocks is carried out in three stages:

- Cutting the wire to the required length and, without stripping it, inserting it into the wire guide **1**.
- Inserting a screwdriver into the hole provided **2**.
- Lifting the screwdriver toward the center of the terminal block. The test point checks that contact has been made **3**.

Recommendations for installation :

- Use a 3–3.5 mm standard, flat screwdriver.
- Insert the screwdriver fully into its guide.
- Cut off the end of the wire if a new connection is to be made.
- UL 1059 specifies that insulation displacement terminal blocks may be reused 10 times.

Mounting accessories

AB1AA insulation displacement terminal blocks use the same accessories as spring terminal blocks:

- 1 2.5 or 35 mm DIN3 rail (7.5 and 15 mm high)
- 2 Plastic end clamp with screw
- 3 Metal end clamp with screw
- 4 Clip-on plastic end clamp
- 5 Marker tag holder for clip-on plastic end clamp
- 6 End plate (thickness 1.5 mm)
- 7 Partition plate (thickness 1.5 mm)
- 8 Insulated jumpers
- 9 Test plug (red)
- 10 Terminal covers
- 11 Marking accessories

General characteristics

Product certifications

Introduction

In some countries, certification of certain electrical components is required by law. In this case, a certificate of conformity must be issued by an official test body. Each certified device must bear the relevant certification symbols when these are mandatory.

Code	Certification body	Country
ASEV	Schweizerischer Elektrotechnischer Verein	Switzerland
CSA	Canadian Standards Association	Canada
KEMA	Keuring van Electrotechnische Materialen	Netherlands
UL	Underwriters Laboratories	United States
VDE	Verband Deutscher Elektrotechniker	Germany
ATEX	See "ATEX Directive" below	Europe
FM	Factory Mutual	United States
UL ex	Underwriters Laboratories	United States
CSA ex	Canadian Standards Association	Canada

In general, prior approval (= certification) by certain marine classification authorities is required for electrical equipment intended for use on board merchant vessels.

Code	Marine classification authority	Country
BV	Bureau Veritas	France
DNV	Det Norske Veritas	Norway
GL	Germanischer Lloyd	Germany
LR	Lloyd's Register	Great Britain
RINA	Registro Italiano Navale	Italy

The tables beginning on page 1/10 show the status of certifications for terminal blocks as of December 31, 2006. An up-to-date list of certifications for Telemecanique® products is available on our website, www.Telemecanique.com.

The ATEX Directive

All devices and equipment intended for use in potentially explosive atmospheres created by the presence of flammable gas, vapor, or dust must conform to the requirements of European Directive 94/9/CE, more generally known as the ATEX 100a directive. "ATEX" is derived from the French term "ATmosphère EXplosible" (explosive atmosphere).

Standards EN 50014, EN 50019 and EN 50281-1-1 apply to terminal blocks in hazardous areas, requiring increased safety (EEx e).

Meaning of markings

In compliance with the ATEX 100a directive, the markings on Telemecanique terminal blocks have the following meaning:

XXX	Identification number of the Notified Body
Ex	Use of the equipment in a potentially explosive atmosphere
II	Device group: II = Surface industries
2	Device category: 2 = Zone 1 (gas) / Zone 21 (dust)
GD	Type of explosive atmosphere: G = (gas), D = (dust)
EEx	Equipment conforming to the type of protection specified by CENELEC
e	Type of protection: e = increased safety

Introduction (continued)

In addition to the ATEX, KEMA 01ATEX2087U, KEMA 02ATEX2113U and KEMA 02ATEX2114U certificates issued for Telemecanique terminal blocks, these blocks have also been certified by the following bodies for Hazardous Locations:

Factory Mutual, U.S.

Class I, Zone 1	Zone classification
AEx	Equipment conforming to national standards (United States)
e	Type of protection: e = increased safety
II	Gas group
T6	Temperature class: T6 = 185 °F (85 °C)

CSA-Ex, Canada

Class I, Zone 1	Zone classification
Ex	Equipment conforming to Canadian standards
e	Type of protection: e = increased safety
II	Gas group
T6	Temperature class: T6 = 185 °F (85 °C)

Installation recommendations for EEx e applications

For EEx e applications (applications in explosive atmospheres requiring increased safety) the following installation precautions must be taken:

- If terminal blocks are installed next to terminal blocks of a different size, or next to terminal blocks for grounding, the open side of a group of terminal blocks of the same type must be closed off with an end plate or a partition plate.
- To maintain the required clearances when adjacent terminal blocks are connected by a jumper, a partition plate must be inserted between each group of terminal blocks, at the beginning and end of each group of jumpered blocks.
- The terminal blocks must only be used inside enclosures that have a degree of protection not less than IP54.

Terminal Blocks, Type AB1

Spring technology
Passthrough-distribution

Potential distribution terminal block allowing interconnection of terminals with a large wire size (16 mm²) and those with a small wire size (2.5 and 4 mm²).

Option to distribute the potential not only on one or both sides (different or identical wire size on each side) but also on one or both shunt lines using insulated jumpers **1**.

Connection on one side	Single		Double	
Nominal wire size (mm ²)	2.5	4	2.5	4
I _{max}	48	64	68	76
I _{Nblock}	24	32	24	32
Connection on both sides	Single		Double	
Nominal wire size (mm ²)	2.5	4	2.5	4
I _{max}	72	76	76	76
I _{Nblock}	24	32	24	32

$$I_{\max} = \sum I_n \leq \sum I_{Nblock}$$

Carrier characteristics	Nominal voltage (Power loss 1.5 W)	Position of terminal block	
		End	Juxtaposed
	250 V	6.3 A	4 A
Blown fuse indicator characteristics	Catalog number	Nominal voltage	Current consumption
	AB1SF520B	24 V	10.3 mA
	AB1SF520M	220–250 V	0.3 mA

Table Footnotes:

- (1) The voltage/current carrying capacity is determined by the component (fuse and/or diode) used.
- (2) Repetitive peak reverse voltage for diodes is 1000 V.
- (3) Fuses and diodes not included, except for AB1SV2.
- (4) Width 0.3 in. (8 mm) on $\frac{1}{4}$ or $\frac{1}{2}$ rails.
- (5) Replace the • symbol with the number of poles (2, 3, 4, 5, or 10), for example, AB1RRAL45 (5-pole).

5 - Terminal Blocks, Type AB1
Marking and Mounting Accessories

	<i>Page</i>
Marking accessories for insulated cable ends . . .	5/2
Mounting track and end clamps	5/4

Description

10 consecutive figures or numbers

Material: 6-6 polyamide
Color: black markings on white background

AB1BV6BM

Note: Each side of the terminal block can be fitted with a marker (1 to 3 figures).

Marker strips available with number ranges from 101–110 up to 991–999

Applications

These marking accessories are for terminal block types AB1 or DB6, but they can also be used with other Telemecanique brand products such as thermal-magnetic protectors, modular contactors, and model D or F contactors.

Strips of clip-in markers

10 identical numbers or symbols

10 numbers 0 to 9

10 identical capital letters

Thermal-magnetic control circuit protectors	
■ 9080GCB	6/2
■ GB2	6/3

- A. Thermal-magnetic circuit protector
- B. 14 stocked current ratings, from 0.1 to 15 A
- C. On-Off switch
- D. Visible trip indication
- E. Mounts on Class 9080 Type GH track and on 35 mm DIN3 mounting track.

These maximum current values assume the use of insulated copper conductors with 75 °C temperature rating, and are calculated based on NEC Article 310, Table 310-16. In most cases this value is the maximum ampacity of that wire or combination of wires (as listed in the table to the right) which has the greatest current carrying capacity. The actual allowable current for a particular application depends on the number, size, insulation class, and other characteristics of the wires used.

Dimensions

- 9080GCB circuit protectors:
- Have solderless box lugs.
 - Accept one #10–16 AWG Cu wire.
 - Come with track adapter 9080GH64 for mounting on 9080GH track. Remove this adapter for mounting on 9080MH2, MH3, and AM1 track. Use mounting adapter 9080MH62 for the DZ5MB201 DIN1 track.

Technical data			
Maximum interrupting rating	200 A, but not exceeding 10,000% (100 x) rated current		
Dielectric strength	1500 Vac		
Insulation resistance	100 MΩ		
Weight	2.2 oz (62.4 g)		
Terminals	Box lug type		
Tightening torque	8–10 lb-in (0.91–1.1 N•m)		
Approvals	File E152841 CCN QVNU2, File LR25490		
Fingersafe per DIN 57470	Yes		
Maximum Current (A) ●	Internal Resistance (Ω)	Maximum voltage	Catalog Number
0.1	1.33	250 Vac 65 Vdc	9080GCB01
0.5	6.6		9080GCB05
0.8	2.55		9080GCB08
1.0	1.97		9080GCB10
1.2	1.22		9080GCB12
1.5	0.86		9080GCB15
2.0	0.49		9080GCB20
2.5	0.31		9080GCB25
3.0	0.20		9080GCB30
4.0	0.10		9080GCB40
5.0	0.08	125 Vac 65 Vdc	9080GCB50
7.0	0.03		9080GCB70
10.0	< 0.02		9080GCB100
15.0			9080GCB150

Selection

- To properly select a Class 9080 Type GCB circuit protector:
- Determine the inrush correction factor from Table A.
 - Determine the temperature correction factor from Table B.
 - Determine the sealed current of the load that is being protected.
 - Multiply the sealed current by the two correction factors and choose the closest circuit protector.

Example: Solenoid with a sealed current of 0.75 A, with an inrush ratio of 1:6, and in an ambient temperature of 85 °F (29.4 °C).
 $0.75 \times 1.5 \times 1.05 = 1.18$

Choose the **1.2 A** protector
Note: Choosing a circuit protector with a value lower than the calculated value might result in nuisance tripping, while choosing the larger might provide a protector that will not properly protect the load.

Table A: Inrush ratio correction						
Note: For resistive loads, use an inrush correction factor of 1.0.						
Inrush ratio	1:1 to 1:4	1:5	1:6	1:7	1:8	
Correction factor	1.3	1.4	1.5	1.6	1.7	

Table B: Ambient temperature correction							
Ambient temperature	°F	70	100	120	140	160	180
	°C	21.1	37.8	48.9	60	71.1	82.2
Correction factor		1.0	1.1	1.2	1.3	1.4	1.5

Tripping time of the circuit protector is determined from Table C below. Divide the circuit protector value by the temperature correction factor from Table B above to determine actual rated current referenced in Table C.

Table C: Tripping times in seconds @ 70 °F (21.1 °C)								
Percent of rated current	100%	200%	300%	400%	500%	600%	1000%	2000% & greater
Trip time (seconds)	no trip	10-40	38	1.5-9	0.8-6	0.003-4	0.003-2	0.02 max.

Note: When several protectors are channel mounted adjacent to each other, the No Trip current will be 80% of rated current at 70 °F (21.1 °C).

Technical information

Protective treatment of equipment according to climate

Protective treatment according to climate

Depending on the climatic and environmental conditions in which the equipment is placed, Schneider Electric can offer specially adapted products to meet your requirements.

To make the correct choice of protective finish, remember the following two points:

- The prevailing climate of the country is never the only criterion.
- Only the atmosphere in the immediate vicinity of the equipment needs to be considered.

All climates treatment “TC”

This is the standard treatment for Telemecanique brand equipment and is suitable for the vast majority of applications. It is the equivalent of treatments described as “Klimafest,” or “Climateproof.”

In particular, it meets the requirements specified in the following publications:

- Publication UTE C 63-100 (method I), successive cycles of humid heat at: +40 °C and 95% relative humidity.
- DIN 50016 - Variations of ambient conditions within a climatic chamber: +23 °C and 83% relative humidity, +40 °C and 92% relative humidity.

It also meets the requirements of the following marine classification societies: BV-LR-GL-DNV-RINA.

Characteristics

- Steel components are usually treated with zinc. When they have a mechanical function, they may also be painted.
- Insulating materials are selected for their high electrical, dielectric, and mechanical characteristics.
- Metal enclosures have a heat-treated paint finish applied over a primary phosphate protective coat, or are galvanized (e.g., some prefabricated busbar trunking components).

Limits for use of “TC” (All climates) treatment

- “TC” treatment is suitable for the following temperatures and humidity:

Temperature	Relative humidity
68 °F (20 °C)	95%
104 °F (40 °C)	80%
122 °F (50 °C)	50%

“TC” treatment is therefore suitable for all latitudes, including tropical and equatorial regions, when the equipment is mounted in normally ventilated industrial premises. Being sheltered from external climatic conditions, temperature variations are small, the risk of condensation is minimized, and the risk of dripping water is virtually non-existent.

Extension of use of “TC” (All climates) treatment

In cases where the humidity around the equipment exceeds the conditions described above, or in equatorial regions if the equipment is mounted outdoors, or if it is placed in a very humid location (laundries, sugar refineries, steam rooms, etc.), “TC” treatment can still be used if the following precautions are taken:

- The enclosure in which the equipment is mounted must be protected with a “TH” finish (see next page) and must be well ventilated to avoid condensation and dripping water (e.g. enclosure base plate mounted on spacers).
- Components mounted inside the enclosure must have a “TC” finish.
- If the equipment is to be switched off for long periods, a heater must be provided (0.2 to 0.5 kW per square decimeter of enclosure), that switches on automatically when the equipment is turned off. This heater keeps the inside of the enclosure at a temperature slightly higher than the outside surrounding temperature, thereby avoiding any risk of condensation and dripping water (the heat produced by the equipment itself during normal running is sufficient to provide this temperature difference).
- Special considerations for Operator Dialog and Detection products: for certain pilot devices, the use of “TC” treatment can be extended to outdoor use provided their enclosure is made of light alloys, zinc alloys, or plastic material. In this case, it is also essential to ensure that the degree of protection against penetration of liquids and solid objects is suitable for the applications involved.

Terminal Blocks, Type AB1

Technical information

Protective treatment of equipment according to climate

“TH” treatment for hot and humid environments

This treatment is suitable for hot and humid atmospheres where installations are regularly subject to condensation, dripping water, and the risk of fungi.

In addition, the plastic insulating components are resistant to attacks from insects such as termites and cockroaches. These properties have often led to this treatment being described as “Tropical Finish,” but this does not mean that all equipment installed in tropical and equatorial regions must systematically have undergone “TH” treatment. Conversely, certain operating conditions in temperate climates may require the use of “TH” treated equipment (see limitations for use of “TC” treatment).

Special characteristics of “TH” treatment

- All insulating components are made of materials which are either resistant to fungi or treated with a fungicide, and which have increased resistance to creepage (Standards IEC60112, NF C 26-220, DIN5348).
- Metal enclosures receive a top-coat of heat-treated, fungicidal paint, applied over a rust inhibiting undercoat. Components with a “TH” treatment may be subject to a surcharge; please consult your local sales office. (A large number of the Telemecanique brand products are “TH” treated as standard, so they are not subject to a surcharge.)

Protective treatment selection guide

Surrounding environment	Duty cycle	Internal heating of enclosure when not in use	Type of climate	Protective treatment of: equipment enclosure	
Indoors					
No dripping water or condensation	Unimportant	Not necessary	Unimportant	“TC”	“TC”
Presence of dripping water or condensation	Frequent switching off for periods of more than 1 day	No	Temperate	“TC”	“TH”
			Equatorial	“TH”	“TH”
		Yes	Unimportant	“TC”	“TH”
	Continuous	Not necessary	Unimportant	“TC”	“TH”
Outdoors (sheltered)					
No dripping water or dew	Unimportant	Not necessary	Temperate	“TC”	“TC”
			Equatorial	“TH”	“TH”
Exposed outdoors or near the sea					
Frequent and regular presence of dripping water or dew	Frequent switching off for periods of more than 1 day	No	Temperate	“TC”	“TH”
			Equatorial	“TH”	“TH”
		Yes	Unimportant	“TC”	“TH”
	Continuous	Not necessary	Unimportant	“TC”	“TH”

These treatments cover, in particular, the applications defined by methods I and II of guide UTE C 63-100.

Special precautions for electronic equipment

Electronic products always meet the requirements of “TC” treatment. A number of them are “TH” treated as standard.

Some electronic products (for example, programmable controllers, flush-mountable type CCX controllers, and flush-mountable type XBT operator terminals) require the use of an enclosure providing a degree of protection to at least IP54, as defined by standards IEC 60664 and NF C 20 040, for use in industrial applications or in environmental conditions requiring “TH” treatment.

These electronic products, including flush-mountable products, must have a degree of protection to at least IP20 (provided either by their own enclosure or by their installation method) for restricted access locations where the degree of pollution does not exceed 2 (for example, a test booth not containing machinery or other dust-producing activities).

Special treatments

For particularly harsh industrial environments, Schneider Electric is able to offer special protective treatments. Please consult your local sales office.

Product standards and certifications

Standardization

Note: For further details on a specific product, please refer to the selection page for that product.

Conformity to standards

Telemecanique brand products satisfy, in the majority of cases, the following types of standards:

- national (for example, BS in Great Britain, NF in France, DIN in Germany)
- European (for example, CENELEC)
- international (IEC)

These product standards precisely define the performance of the designated products (such as IEC 60947 for low voltage equipment).

When used correctly, as designated by the manufacturer and in accordance with regulations and correct practices, these products will allow users to build equipment, machine systems, or installations that conform to their appropriate standards (for example: IEC60204-1, relating to electrical equipment used on industrial machines).

Schneider Electric is able to provide proof of conformity of its production to the standards it has chosen to comply with, through its quality assurance system.

On request, and depending on the situation, Schneider Electric can provide the following:

- A declaration of conformity
- A certificate of conformity (ASEFA/LOVAG)
- A homologation certificate or approval, in the countries where this procedure is required or for particular specifications, such as those existing in the merchant navy

Code	Certification authority		Country
	Name	Abbreviation	
ANSI	American National Standards Institute	ANSI	USA
BS	British Standards Institution	BSI	Great Britain
CEI	Comitato Elettrotecnico Italiano	CEI	Italy
DIN/VDE	Verband Deutscher Elektrotechniker	VDE	Germany
EN	Comité Européen de Normalisation Electrotechnique	CENELEC	Europe
GOST	Gosudarstvennoy Komitet Standartov	GOST	Russia
IEC	International Electrotechnical Commission	IEC	Worldwide
JIS	Japanese Industrial Standard	JISC	Japan
NBN	Institut Belge de Normalisation	IBN	Belgium
NEN	Nederlands Normalisatie Instituut	NNI	Netherlands
NF	Union Technique de l'Electricité	UTE	France
SAA	Standards Association of Australia	SAA	Australia
UNE	Asociacion Española de Normalizacion y Certificacion	AENOR	Spain

European EN standards

These are technical specifications established in conjunction with, and with approval of, the relative bodies within the various CENELEC member countries (European Union, European Free Trade Association, and many central and eastern European countries having Member or Affiliated status). Prepared in accordance with the principle of consensus, the European standards are the result of a weighted majority vote. Such adopted standards are then integrated into the national collection of standards, and contradictory national standards are withdrawn. European standards incorporated within the French collection of standards carry the prefix NFEN. At the *Union Technique de l'Electricité* (UTE, or Technical Union of Electricity), the French version of a corresponding European standard carries a dual number: European reference (NFEN ...) and classification index (C ...).

Therefore, standard NF EN 60947-4-1, relating to motor contactors and starters, effectively constitutes the French version of European standard EN 60947-4-1 and carries the UTE classification C 63-110.

This standard is identical to the British standard BS EN 60947-4-1 or the German standard DIN EN 60947-4-1.

Whenever reasonably practical, European standards reflect international standards (IEC).

With regard to automation system components and distribution equipment, in addition to complying with the requirements of French NF standards, Telemecanique brand components conform to the standards of all other major industrial countries.

Regulations

European Directives

Opening up of European markets assumes harmonization of the regulations pertaining to each of the member countries of the European Union.

The purpose of the European Directive is to eliminate obstacles hindering the free circulation of goods within the European Union, and it must be applied in all member countries. Member countries are obliged to transcribe each Directive into their national legislation and to simultaneously withdraw any contradictory regulations. The Directives, in particular those of a technical nature which concern us, only establish the objectives to be achieved, referred to as "essential requirements."

The manufacturer must take all the necessary measures to ensure that its products conform to the requirements of each Directive applicable to its production.

As a general rule, the manufacturer certifies conformity to the essential requirements of the Directive(s) for the product by affixing the CE mark.

The CE mark is affixed to the Telemecanique brand products concerned, to comply with French and European regulations.

Significance of the CE mark

- The CE mark affixed to a product signifies that the manufacturer certifies that the product conforms to the relevant European Directive(s) which concern it; this condition must be met to allow free distribution and circulation within the countries of the European Union of any product subject to one or more of the E.U. Directives.
- The CE mark is intended solely for national market control authorities.
- The CE mark must not be confused with a conformity marking.

Terminal Blocks, Type AB1

Technical information

Product standards and certifications

European Directives (continued)

For electrical equipment, only conformity to standards signifies that the product is suitable for its designated function, and only the guarantee of an established manufacturer can provide a high level of quality assurance.

For Telemecanique brand products, one or several Directives are likely to be applicable, depending on the product, and in particular:

- The Low Voltage Directive 73/23/EEC amended by Directive 93/68/EEC: the CE mark relating to this Directive has been compulsory since January 1, 1997
- The Electromagnetic Compatibility Directive 89/336/EEC, amended by Directives 92/31/EEC and 93/68/EEC: the CE mark on products covered by this Directive has been compulsory since January 1, 1996

RoHS Compliance

RoHS, European Union Directive 2002/95/EC, restricts the use of certain hazardous substances in electrical equipment sold in Europe on or after July 1, 2006. The scope of this directive is primarily for consumable electrical and electronic products. In general, industrial control products are not within this scope; however, in some applications, terminal blocks can fall within this scope. The AB1 terminal blocks comply with the RoHS Directive.

To learn more, visit our RoHS website at www.rohs.schneider-electric.com, or enter through the RoHS icon at www.us.schneider-electric.com. If you have a question about a specific catalog number, use the Check a Product link to determine the current status of any product. If you have additional questions, contact your nearest Schneider Electric sales office for assistance.

ASEFA-LOVAG certification

The function of ASEFA (*Association des Stations d'Essais Française d'Appareils électriques*, or Association of French Testing Stations for Low Voltage Industrial Electrical Equipment) is to carry out tests of conformity to standards and to issue certificates of conformity and test reports.

ASEFA laboratories are authorized by the French authorization committee (COFRAC).

ASEFA is now a member of the European agreement group LOVAG (Low Voltage Agreement Group). This means that any certificates issued by LOVAG/ASEFA are recognized by all the authorities which are members of the group and carry the same validity as those issued by any of the member authorities.

Quality labels

When components can be used in domestic and similar applications, it is sometimes recommended that a "Quality label" be obtained, which is a form of certification of conformity.

Code	Quality label	Country
CEBEC	Comité Electrotechnique Belge	Belgium
KEMA-KEUR	Keuring van Electrotechnische Materialen	Netherlands
NF	Union Technique de l'Electricité	France
ÖVE	Österreichischer Verband für Electrotechnik	Austria
SEMKO	Svenska Elektriska Materiel Kontrollnatanalen	Sweden

Product certifications

In some countries, the certification of certain electrical components is a legal requirement. In this case, a certificate of conformity to the standard is issued by the official test authority. Each certified device must bear the relevant certification symbols when these are mandatory:

Code	Certification authority	Country
CSA	Canadian Standards Association	Canada
UL	Underwriters Laboratories	USA
CCC	China Compulsory Certification	China

On certifications issued by the Underwriters Laboratories (UL), there are two levels of approval:

"Recognized" (R)	The component is fully approved for inclusion in equipment built in a workshop, where the operating limits are known by the equipment manufacturer and where its use within such limits is acceptable by the Underwriters Laboratories. The component is not approved as a "Product for general use" because its manufacturing characteristics are incomplete or its application possibilities are limited. A "Recognized" component does not necessarily carry the certification symbol.
"Listed" (UL)	The component conforms to all the requirements of the classification applicable to it and may therefore be used both as a "Product for general use" and as a component in assembled equipment. A "Listed" component must carry the certification symbol.

Marine classification societies

Prior approval (= certification) by certain marine classification societies is generally required for electrical equipment which is intended for use on board merchant vessels.

Code	Classification authority	Country
BV	Bureau Veritas	France
DNV	Det Norske Veritas	Norway
GL	Germanischer Lloyd	Germany
LR	Lloyd's Register	Great Britain
NKK	Nippon Kaiji Kyokai	Japan
RINA	Registro Italiano Navale	Italy
RRS	Register of Shipping	Russia

The efficiency of **Telemecanique** branded *solutions*

Used in combination, Telemecanique products provide quality solutions, meeting all the requirements of your **Automation & Control** application.

A **worldwide** presence

Constantly available

- More than 5,000 points of sale in 130 countries.
- You can be sure to find the range of products that are right for you and that comply fully with the standards in the country where they are used.

Technical assistance wherever you are

- Our technicians are at your disposal to assist you in finding the optimum solution for your particular needs.
- Schneider Electric provides you with all necessary technical assistance throughout the world.
