Go online to www.schneider-electric.com for information about Lexium™ products listed in this catalog, including:

- 1 Go to: www.schneider-electric.com and select **“Products”** on the “Products and Services” tab.

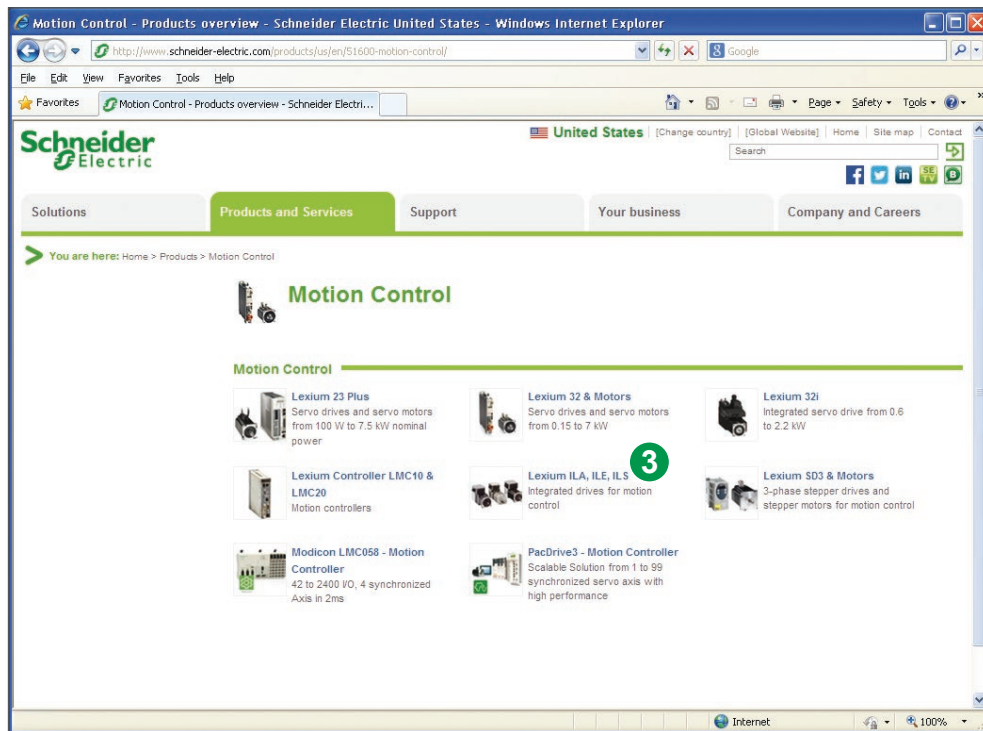

- 2 On the “Products” page, find the “Motion Control” icon and select **“All Motion Control”**.

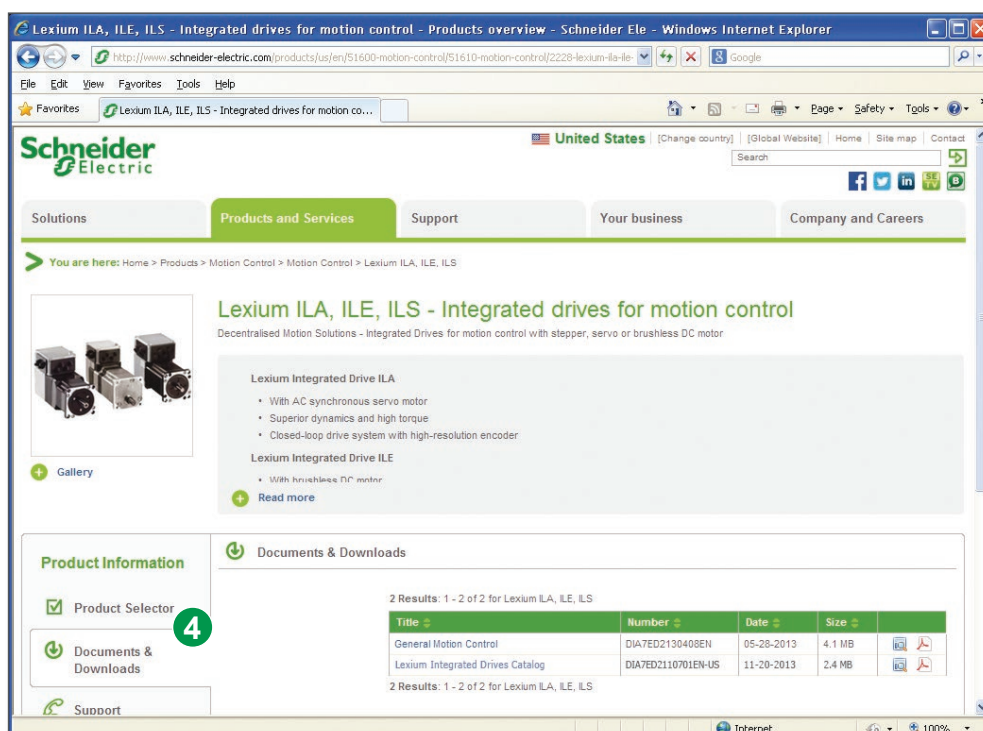

> Specifications > Dimensions > References
> Curves > Links to user guides and CAD files

3 On the “Motion Control” page, select “Lexium ILA, ILE, ILS”.

4 Explore the Lexium ILA, ILE, ILS product page, including the “Product Information” tabs: “Documents & Downloads” and “Support”.

Material handling application

Labelling application

Overview

Lexium™ Integrated Drives are used to create decentralized motion control solutions in very compact units.

These drives consist of a motor and control electronics. They are controlled via a communication bus, a pulse/direction (P/D) interface or an I/O interface (for the "Motion sequence" operating mode).

Lexium Integrated Drives are used as decentralized drives in machine building. When combined with a Schneider Electric Lexium Controller or a PLC, they can be used to create complex control system architectures simply and at minimum cost. Ready-to-use function blocks are available for programming movements with Schneider Electric or third-party motion controllers.

Compact design

Lexium motor and control electronics form a compact unit. This decentralized unit does not require any space in the enclosure for the control electronics, thus reducing the size of the machine.

Simple to install and commission

Integration of the motor and the control electronics reduces installation costs and simplifies incorporation of electromagnetic compatibility. In addition, Lexium CT PC software enables rapid commissioning.

Optimum flexibility to adapt to your application

Lexium Integrated Drives can be equipped with an AC synchronous servo motor, a DC brushless motor or a stepper motor, providing multiple options for use in a wide variety of applications.

Depending on the technology used, these drives can meet requirements for dynamic performance, flexibility or precision in motion control applications.

Open communication with control system architectures

Depending on the model, Lexium Integrated Drives incorporate as standard the main communication protocols used in industry for increased performance of your applications:

- CANopen, PROFIBUS DP, DeviceNet, EtherCAT, EtherNet/IP, Ethernet POWERLINK™ and Modbus TCP communication buses and networks
- RS 485 serial link

Lexium Integrated Drives with stepper motor are also available with a pulse/direction (P/D) interface or an I/O interface for the motion sequence.

This open communication concept enables integration in numerous control system architectures.

Integrated safety

The integrated Safe Torque Off (Power Removal) safety function enables a category 0 or 1 stop to be performed in accordance with standard IEC/EN 60204-1 without external power protection devices.

The integrated drive does not have to be switched off, which reduces the system costs and restart times. This drive complies with the requirements of the following standards: IEC/EN 61508 SIL2, ISO 13849-1 performance level "d" (PL d) and IEC/EN 61800-5-2 (STO).

Applications

Lexium Integrated Drives are suitable for the most common applications, including:

- Packaging
- Material handling, labelling
- Textiles
- Printing
- Electronic components
- Medical technology

Lexium™ Integrated Drives Motion control

Lexium CT commissioning software

Overview (continued)

Commissioning time for Lexium Integrated Drives is reduced considerably using the Lexium CT (Lexium Commissioning Tool) PC software.

This software is used for commissioning, parameter setting, simulation and diagnostics.

Functions

Lexium CT PC software includes the following functions:

- Entry and display of parameters
- Archiving and duplication of parameters
- Display of status information
- Positioning of the motor via the PC
- Initiation of homing movements
- Access to all documented parameters
- Fault diagnostics
- Controller optimization (for ILA integrated drive)

Required configuration

Lexium CT software runs on a PC with the Microsoft Windows® 2000/XP/Vista operating systems. The integrated drive is commissioned via the communication interface.

Download

Lexium CT software can be downloaded from our website:
www.schneider-electric.com.

ILA1 with AC synchronous servo motor

ILE1 with brushless servo motor

ILS1 with stepper motor

Introduction

Lexium IL●1 Integrated Drives include a motor, control electronics and a communication interface for:

- CANopen DS301 machine bus (IL●1F)
- PROFIBUS DP V0 fieldbus (IL●1B)
- RS 485 serial link (IL●1R)

The communication bus interface is used for setting parameters and controlling the integrated drives, as well as for commissioning, using Lexium CT software.

Lexium IL●1 Integrated Drives also have an RS 485 serial link interface and an interface for four 24 V signals, which can be configured as either inputs or outputs to suit application requirements.

These drivers also have a Safe Torque Off (Power Removal) safety function as standard, which prevents unintended motor operation.

The control section is comprised of control electronics and a power stage which share a common power supply.

Lexium IL●1 Integrated Drives can operate on a 24 V to 36 V $\overline{\text{V}}$ supply.

Three motor technologies are offered to cover a wide range of applications.

Adaptability assured by three motor technologies

The Lexium IL●1 Integrated Drive range offers three motor technologies to meet the requirements for dynamic performance, flexibility or precision in a wide variety of applications:

ILA1: the integrated drive for dynamic processes

The ILA1 Integrated Drive is equipped with an AC synchronous servo motor.

This motor features high dynamic performance, as it can be temporarily boosted when accelerating.

Application example: bottling

Bottles are transported on a conveyor up to the filling point, where their presence is detected by a sensor.

The Lexium ILA1 drive activates a pump to start filling the bottle then ensures accurate filling and instant stop to avoid overflowing by means of its closed loop function.

ILE1: the integrated drive for automatic format adjustment

The ILE1 Integrated Drive is equipped with a DC brushless motor.

This motor has a high automatic holding torque, which makes the use of a holding brake unnecessary in the majority of applications.

The control electronics incorporated in the ILE1 drive provide absolute encoder functionality.

Application example: ground-mounted solar power plants

The latest solar power plants are equipped with biaxial tracking systems (azimuth/zenith).

Each axis is controlled by two Lexium ILE1 Integrated Drives.

The Lexium ILE1 drive was chosen for its high holding torque and because it totally eliminates the need for electrical cabinets.

ILS1: the integrated drive for short range positioning

With its 3-phase stepper motor, the ILS1 Integrated Drive offers high torque values at low rotation speeds.

In rotation speed mode, it has excellent stability characteristics and also enables high resolution positioning tasks.

Commissioning an ILS1 Integrated Drive with stepper motor is simplified, as it does not require any configuration of the control loop.

Application example: labelling machine

The Lexium ILS Integrated Drive's high torque is used to control the unrolling speed of the label roll.

Lexium™ Integrated Drives

Motion control

IL●1 for CANopen, PROFIBUS DP, RS 485

Interfaces

Communication bus interface

Depending on the IL drive model, the following communication buses can be connected:

- CANopen machine bus (protocol DS301)
- PROFIBUS DP V0 fieldbus (data format according to Profidrive V2.0 PPO type 2)
- RS 485 serial link

The communication bus interface is used for setting parameters and controlling the integrated drive.

This bus is also used as an option for connecting the terminal, when commissioning the integrated drive using Lexium CT PC software (see page 7). A suitable communication bus converter is then required, for example CAN/USB, PROFIBUS DP/USB or RS 485/USB.

RS 485 serial link interface

The Lexium IL●1 Integrated Drive is commissioned by default via the RS 485 serial link interface.

This interface also accesses the drive's integrated control/monitoring function. This function can also be accessed via the Lexium CT PC software.

The communication bus and RS 485 serial link can be connected simultaneously.

Interface for 24 V signals

Four 24 V signals are available, configurable as inputs or outputs. They can also be used for predefined functions such as limit switches or reference sensors, and can be used by the master controller.

The 24 V power for the outputs is provided internally via the integrated drive's power supply.

Interface for integrated Safe Torque Off function

The Safe Torque Off (Power Removal) safety function enables a category 0 or 1 stop to be performed in accordance with IEC/EN 60204-1 and/or prevents unintended motor operation in accordance with IEC/EN 61508 level SIL2, ISO 13849-1 performance level "d" (PL d) and IEC/EN 61800-5-2 (STO). No additional power protection is necessary.

The Lexium IL●1 Integrated Drive can remain powered up, which reduces system costs and restart time.

The Safe Torque Off function is activated via two redundant 24 V input signals (active in OFF state).

Special technical features

ILA1 with AC synchronous servo motor

- High dynamic performance and high peak torque
- Choice of:
 - single turn high resolution encoder, 16,384 points/turn (0.02°)
 - multiturn high resolution encoder, 16,384 points/turn (0.02°) for 4096 turns
- Integrated holding brake available as an option
- Planetary gearbox available as an option

ILE1 with DC brushless motor

- High automatic holding torque
- Absolute encoder: no homing required after switching off/on
- Can be equipped with integral straight-tooth gearbox or tapered worm gearbox
- Planetary gearbox available as an option

ILS1 with 3-phase stepper motor

- High continuous stall torque
- Good speed stability characteristics
- High encoder accuracy (0.018°)
- Holding brake available as an option for ILS1●85 Integrated Drive
- Planetary gearbox available as an option

Lexium™ Integrated Drives

Motion control

IL●1 for CANopen, PROFIBUS DP, RS 485

Integrated drive with printed circuit board connectors

Integrated drive with industrial connectors

Connections

Two types of connectors are available depending on the types of machine to be equipped.

They are used to connect the communication buses, the RS 485 serial link, the interfaces for 24 V signals and the Safe Torque Off function, as well as the power supply.

Printed circuit board connectors

Printed circuit board connectors are preferably used for wiring standard machines with cable harnesses.

The Lexium IL●1 Integrated Drive is connected by means of two cable entry plates, to be ordered separately (see accessories page 38).

Industrial connectors

Integrated drives with industrial connectors are preferably used for special machines and small series production machines.

The communication buses and the power supply are connected by means of the industrial connectors located on the top of the drive.

The RS 485 serial link, the 24 V signals and the Safe Torque Off function are connected via two plates fitted with industrial connectors, to be ordered separately (see accessories pages 38 and 40).

Compliance with international standards and certifications

The Lexium Integrated Drives product offer has been developed in accordance with strict international standards and recommendations for variable speed electrical power drive products – in particular IEC/EN 61800-3 (immunity to disturbance related to high frequency signals connected by cables and transmitted) – and IEC/EN 50178 (vibration resistance).

Compliance with electromagnetic compatibility requirements has been incorporated in the design of the Lexium Integrated Drive product range. The entire product range conforms to international standard IEC/EN 61800-3:2001, environment 2.

Lexium Integrated Drives carry the CE marking in accordance with the European machinery directive (98/37/EEC) and the European EMC directive (2004/108/EEC).

The entire range is cULus certified (United States and Canada).

It is also TÜV certified in accordance with safety standards for medical devices and equipment. This certification covers:

- Functional safety of electrical/electronic/programmable electronic safety-related systems (IEC 61508: 2000; SIL 2)
- Safety of machinery – functional safety of safety-related electrical, electronic and programmable electronic control systems (IEC 62061: 2005; SILcl2)
- Safety of machinery – safety-related parts of electronic control systems – part 1: General principles for design (ISO 13849-1: 2006; PL d (category 3))

Lexium™ Integrated Drives

Motion control

IL●1 for CANopen, PROFIBUS DP, RS 485

Main functions

Lexium IL●1 Integrated Drives include the main functions required for motion control, including:

Configuration by means of parameter switches

The following settings can be performed using the parameter switches in the integrated drive:

- CANopen DS301 and RS 485 serial link:
 - setting of the communication bus address
 - setting of the transmission rate
 - end of line termination activation
 - setting of the pulse/direction (P/D) signals or encoder (A/B) signals to “electronic gearbox” mode for integrated drive ILA1●57 equipped with a single turn encoder
- PROFIBUS DP V0:
 - setting of the fieldbus address
 - end-of-line termination activation

Operating modes

The following operating modes can be set via the communication bus:

- electronic gearbox (for drive ILA1●57 with single turn encoder)
- speed profile
- manual (JOG)
- point-to-point
- homing

Other operating modes can be activated via the communication bus or with Lexium CT PC software:

- activation of the motor brake
- reversal of direction of rotation of the motor
- setting of the motion profile via the profile generator
- setting of the motor phase current
- triggering of the Quick Stop function
- fast position capture via an input signal
- configuration of I/O signals
- scaling of drive internal units to user units
- control/monitoring functions

Note: For details of available functions, please visit our website www.schneider-electric.com.

Lexium™ Integrated Drives Motion control

IL●1 for CANopen, PROFIBUS DP, RS 485
ILA1 with AC synchronous servo motor

Description

ILA1 Integrated Drives consist of control electronics with an interface for CANopen DS301, PROFIBUS DP or RS 485 communication bus and an AC synchronous servo motor.

They can be equipped with a single turn or multiturn encoder as required.

For ILA1 Integrated Drives equipped with a single turn encoder, an integrated holding brake is also available as an option.

Two types of connection are possible:

- Printed circuit board connectors
- Industrial connectors

- 1 AC synchronous servo motor
- 2 Integrated holding brake (optional)
- 3 Single turn or multiturn encoder
- 4 Electronic unit
- 5 Parameter switch
- 6 Connection terminals

For drive with printed circuit board connector:

7 Cable entry plate (see accessories page 38)

8 Cover

For drive with industrial connector:

9 Plate for connecting I/O and the Safe Torque Off function (see accessories page 40)

10 Cover for connecting the 24/36 V power supply and the communication bus (see accessories page 40)

Note: I/O connection plate equipped with industrial connectors for RS 485 serial link, CANopen machine bus and PROFIBUS DP communication bus: 2 round connectors (1 round connector for each signal, IN and OUT).

Lexium™ Integrated Drives Motion control

IL●1 for CANopen, PROFIBUS DP, RS 485
ILS1 with 3-phase stepper motor

Description

ILS1 Integrated Drives consist of control electronics with an interface for CANopen DS301, PROFIBUS DP or RS 485 communication bus and a 3-phase stepper motor.

For ILS1●85 Integrated Drives, an integrated holding brake is also available as an option.

Two types of connection are possible:

- Printed circuit board connectors
- Industrial connectors

1 3-phase stepper motor

2 Electronic unit

3 Parameter switch

4 Connection terminals

For drive with printed circuit board connector:

5 Cable entry plate (see accessories page 38)

Lexium™ Integrated Drives

Motion control

IL2 for DeviceNet, EtherCAT, EtherNet/IP, Modbus TCP, Ethernet POWERLINK

ILA2 with AC synchronous servo motor

ILE2 with brushless servo motor

ILS2 with stepper motor

Introduction

Lexium IL●2 Integrated Drives include a motor, control electronics and a communication interface for:

- DeviceNet (IL●2D)
- EtherCAT (IL●2E)
- EtherNet/IP (IL●2K)
- Modbus TCP (IL●2T)
- Ethernet POWERLINK (IL●2P)

The communication bus interface is used for setting parameters and controlling the integrated drives, as well as for commissioning using Lexium CT software.

Lexium IL●2 Integrated Drives also have an RS 485 serial link interface and an interface for four 24 V signals, which can be configured as either inputs or outputs to suit application requirements.

They also include the Safe Torque Off (Power Removal) safety function as standard, which prevents unintended motor operation.

The control section is comprised of control electronics and a power stage which share a common power supply.

Lexium IL● 2 Integrated Drives can operate on a 24 V to 48 V $\overline{\text{V}}$ supply.

Three motor technologies are offered to cover a wide range of applications.

Adaptability assured by three motor technologies

The Lexium IL●2 Integrated Drive product range offers three motor technologies to meet requirements for dynamic performance, flexibility or precision in a wide variety of applications:

ILA2: the integrated drive for dynamic processes

The ILA2 Integrated Drive is equipped with an AC synchronous servo motor. This motor features high dynamic performance, as it can be temporarily boosted when accelerating.

Application example: manufacture of CDs/DVDs

From the pressing of the CD or DVD right through to the end of manufacturing, the process is totally automated using Lexium IIA2 Integrated Drives, which increase productivity and reduce floor space by approximately 10%.

ILE2: the integrated drive for automatic format adjustment

The ILE2 Integrated Drive is equipped with a DC brushless motor. This motor has a high automatic holding torque. This makes the use of a holding brake unnecessary in the majority of applications. The control electronics incorporated in the ILE2 drive provide absolute encoder functionality.

Application example: manufacture of solar cells

Electrical circuits are printed using a silkscreening process. Lexium ILE2 Integrated Drives are used for conveying.

Dynamic performance is significantly improved and the wiring time is reduced.

Other integrated drives, such as Lexium ILS2, are also used for precise positioning, or Lexium ILA2 for the printing process.

ILS2: the integrated drive for short range positioning

With its 3-phase stepper motor, the ILS2 Integrated Drive offers high torque values at low rotation speeds. It is mainly used in rotation speed mode with excellent stability characteristics and also for high resolution positioning.

The commissioning of ILS2 drives with stepper motor is simple, as it does not require any configuration of the control loop.

Application example: lumber processing

In applications using multi-blade circular saws, the planks are measured using lasers. They are positioned using linear axes equipped with a Lexium ILS2 Integrated Drive. Because of the harsh environmental conditions, the control cabinets are located some distance from the machinery. This concept of decentralization considerably reduces the wiring.

Lexium™ Integrated Drives

Motion control

IL●2 for DeviceNet, EtherCAT, EtherNet/IP,
Modbus TCP, Ethernet POWERLINK

Interfaces

Communication bus interface

Depending on the model, the following communication buses can be connected:

- DeviceNet
- EtherCAT (according to IEEE 802.3)
- EtherNet/IP (according to IEEE 802.3)
- Modbus TCP (according to IEEE 802.3)
- Ethernet POWERLINK (according to IEEE 802.3)

The communication bus interface is used for setting parameters and controlling the integrated drive.

It is also used as an option for connecting the terminal when commissioning the integrated drive using Lexium CT PC software (see page 7).

Connection to the DeviceNet fieldbus, available depending on the model, provides access to the ADR (Auto Device Replacement) function. If maintenance is required, this function enables drives to be replaced without having to redefine the parameters.

The communication bus and RS 485 serial link can be connected simultaneously.

RS 485 serial link interface

The Lexium IL●2 Integrated Drive is commissioned by default via the RS 485 serial link interface.

This interface also accesses the control/monitoring function included in the drive. This function can also be accessed via the Lexium CT PC software.

The communication bus and RS 485 serial link can be connected simultaneously.

Interface for 24 V signals

Four 24 V signals are available, configurable as inputs or outputs. They can also be used to set the parameters of predefined functions such as limit switch detection.

These signals can be used by the master controller.

The 24 V power for the outputs is provided internally via the integrated drive's power supply.

Interface for integrated Safe Torque Off function

The Safe Torque Off (Power Removal) safety function enables a category 0 or 1 stop to be performed in accordance with standard IEC/EN 60204-1 and/or prevents unintended motor operation in accordance with standard IEC/EN 61508 level SIL2, ISO 13849-1 performance level "d" (PL d) and IEC/EN 61800-5-2 (STO).

No additional power protection option is necessary. The Lexium IL●1 Integrated Drive can remain powered up, which reduces system costs and restart time.

The Safe Torque Off function is activated via two redundant 24 V input signals (active in OFF state).

Lexium™ Integrated Drives

Motion control

IL●2 for DeviceNet, EtherCAT, EtherNet/IP,
Modbus TCP, Ethernet POWERLINK

Integrated drive with printed circuit board connectors

Integrated drive with industrial connectors

Special technical features

ILA2 with AC synchronous servo motor

- High dynamic performance and high peak torque
- Choice of:
 - Single turn high resolution encoder, 16,384 points/turn (0.02°)
 - Multiturn high resolution encoder, 16,384 points/turn (0.02°) for 4096 turns
- Integrated holding brake available as an option
- Planetary gearbox available as an option

ILE2 with DC brushless motor

- High automatic holding torque
- Absolute encoder: no homing required after switching off/on
- Can be equipped with integral straight-tooth gearbox or tapered worm gearbox
- Planetary gearbox available as an option

ILS2 with 3-phase stepper motor

- High continuous stall torque
- Good speed stability characteristics
- High encoder accuracy (0.018°)
- Holding brake available as an option for ILS2●85 Integrated Drive
- Planetary gearbox available as an option

Connections

Two types of connectors are available, depending on the types of machine to be equipped. They are used to connect the communication buses, the RS 485 serial link, the interfaces for 24 V signals, and the Safe Torque Off function...as well as the power supply.

Printed circuit board connectors

Printed circuit board connectors are preferably used for wiring standard machines with cable harnesses.

The integrated drive is connected via two cable entry plates, to be ordered separately (see accessories page 38).

Industrial connectors

Integrated drives with industrial connectors are preferably used for special machines and small series production machines.

The communication buses and power supply are connected by means of the industrial connectors located on the top of the drive.

The RS 485 serial link, the 24 V signals and the Safe Torque Off function are connected via two plates fitted with industrial connectors, to be ordered separately (see accessories pages 38 and 40).

Lexium™ Integrated Drives

Motion control

IL●2 for DeviceNet, EtherCAT, EtherNet/IP, Modbus TCP, Ethernet POWERLINK

Compliance with international standards and certifications

The Lexium Integrated Drive product range has been developed in accordance with strict international standards and with the recommendations for variable speed electrical power drive products, in particular IEC/EN 61800-3 (immunity to disturbance related to high frequency signals connected by cables and transmitted) and IEC/EN 50178 (vibration resistance).

Compliance with electromagnetic compatibility requirements has been incorporated in the integrated drive range. The entire product range conforms to international standard IEC/EN 61800-3:2001, environment 2.

Lexium Integrated Drives carry the CE marking in accordance with the European machinery directive (98/37/EEC) and the European EMC directive (2004/108/EEC).

The entire range is cULus certified (United States and Canada).

It is also TÜV certified in accordance with the safety standards for medical devices and equipment. This certification covers:

- Functional safety of electrical/electronic/programmable electronic safety-related systems (IEC 61508: 2000; SIL 2)
- Safety of machinery – functional safety of safety-related electrical, electronic and programmable electronic control systems (IEC 62061: 2005; SILcl2)
- Safety of machinery – safety-related parts of electronic control systems – part 1: General principles for design (ISO 13849-1: 2006; PL d (category 3))

Main functions

Lexium IL●2 Integrated Drives include the main functions required for motion control, in particular:

Configuration by parameter switch

Depending on the communication bus, the following settings can be performed using the parameter switches in the integrated drive:

- DeviceNet:
setting of the communication bus address
- EtherCAT, EtherNet/IP, Modbus TCP and Ethernet POWERLINK:
setting of the IP address

Operating modes

The following operating modes can be set via the communication bus:

- Electronic gearbox (for ILA2 Integrated Drive with single turn encoder)
- Speed profile
- Manual (JOG)
- Point-to-point
- Homing

Other operating modes can be activated via the communication bus or the Lexium CT PC software:

- Activation of the motor brake
- Reversal of the direction of rotation of the motor
- Setting of the motion profile via the profile generator
- Setting of the motor phase current
- Triggering of the Quick Stop function
- Fast position capture via an input signal
- Configuration of I/O signals
- Scaling of units within the drive to user units
- Control/monitoring functions

Note: For details of available functions, please visit our website www.schneider-electric.com.

Lexium™ Integrated Drives Motion control

IL●2 for DeviceNet, EtherCAT, EtherNet/IP,
Modbus TCP, Ethernet POWERLINK
ILA2 with AC synchronous servo motor

Description

ILA2 Integrated Drives consist of control electronics with an interface for DeviceNet, EtherCAT, EtherNet/IP, Modbus TCP or Ethernet POWERLINK communication bus and an AC synchronous servo motor.

They can be equipped with a single turn or multiturn encoder as required.

For ILA2 Integrated Drives equipped with a single turn encoder, an integrated holding brake is also available as an option.

Two types of connection are possible:

- Printed circuit board connectors
- Industrial connectors

- 1 AC synchronous servo motor
- 2 Integrated holding brake (option)
- 3 Single turn or multiturn encoder
- 4 Electronic unit
- 5 Parameter switch
- 6 Connection units

For drive with printed circuit board connector:

- 7 Cable entry plate (see accessories page 38)

- 8 Cover

For drive with industrial connector:

- 9 Plate for connecting I/O and the Safe Torque Off function (see accessories page 40)

- 10 Cover for connecting the 24/48 V $\overline{\text{V}}$ power supply and the communication bus (see accessories page 40)

Note: I/O connection plate equipped with industrial connectors for:

DeviceNet and Modbus TCP communication bus: 1 round connector for IN and OUT signals

EtherCAT, EtherNet/IP and Ethernet POWERLINK communication bus: 2 round connectors (1 round connector for each signal, IN and OUT).

Lexium™ Integrated Drives Motion control

IL●2 for DeviceNet, EtherCAT, EtherNet/IP,
Modbus TCP, Ethernet POWERLINK
ILE2 with DC brushless motor

Description

ILE2 Integrated Drives consist of control electronics with an interface for DeviceNet, EtherCAT, EtherNet/IP, Modbus TCP or Ethernet POWERLINK communication bus and a DC brushless motor.

They are available with straight-tooth gearbox or tapered worm gearbox with printed circuit board connectors or industrial connectors.

1 DC brushless motor

2 Electronic unit

3 Parameter switch

4 Connection terminals

For integrated drive with printed circuit board connector:

5 Cable entry plate (see accessories page 38)

6 Cover

For integrated drive with industrial connector:

7 Plate for connecting I/O and the Safe Torque Off function (see accessories page 40)

8 Cover for connecting the 24/48 V $\overline{\text{V}}$ power supply and the communication bus (see accessories page 40)

Note: I/O connection plate equipped with industrial connectors for:

DeviceNet and Modbus TCP communication bus (1 round connector for IN and OUT signals)

EtherCAT, EtherNet/IP and Ethernet POWERLINK communication bus: 2 round connectors (1 round connector for each signal, IN and OUT).

Lexium™ Integrated Drives

Motion control

ILS1 with I/O interface for motion sequence

ILS1 with I/O interface for motion sequence

Introduction

Lexium ILS1 Integrated Drives with I/O interface for motion sequence, consist of a 3-phase stepper motor and control electronics.

These ILS1 Integrated Drives with this 3-phase stepper motor provide high torques at low speeds of rotation. They are mainly used in rotation speed mode and have excellent stability characteristics for high resolution positioning.

The control section consists of control electronics and a power stage, that have a common power supply and are thermally isolated from the motor. These control electronics are not electrically isolated.

These integrated drives can operate on a 24 V to 36 V $\text{V} \text{---}$ supply.

Lexium ILS1 Integrated Drives with I/O interface for motion sequence have numerous interfaces:

- Multifunction interface for selecting up to 16 movement instruction sets
- Interface for four 24 V signals, configurable as outputs or inputs
- RS 485 serial link interface for ease of maintenance
- Interface for the integrated Safe Torque Off function

They are wired via a printed circuit board connector.

The commissioning of drives with stepper motor is simplified, as they do not require any configuration of the control loop.

Instruction sets

Up to 16 instruction sets, containing movement instructions, can be selected and activated directly or sequentially via the logic inputs.

Movement instructions can contain homing commands or positioning instructions. This allows motion sequences to be saved in the drive and controlled via the logic inputs.

The instruction sets are entered and the drive parameters are set using Lexium CT PC software.

Lexium™ Integrated Drives

Motion control

ILS1 with I/O interface for motion sequence

Interfaces

Multifunction interface

The multifunction interface is used to select and activate up to 16 instruction sets, containing movement instructions, via the logic inputs. It is also possible to set the parameters of specific start functions.

RS 485 serial link interface

The RS 485 interface is used to connect an RS 485 serial link during configuration, commissioning or maintenance. It is used to connect the Lexium CT PC software with a direct link, via an RS 485/USB converter, to access the fault log, temperature control and various other functions.

Interface for 24 V signals

Four 24 V signals are available, configurable as inputs or outputs via the parameter switch.

They can also be used to set the parameters of functions, such as limit switch detection, and can be used by the master controller.

The 24 V power for the outputs is provided internally via the integrated drive's power supply.

Interface for Safe Torque Off (Power Removal) safety function

The Safe Torque Off (Power Removal) safety function enables a category 0 or 1 stop to be performed in accordance with standard IEC/EN 60204-1 and/or prevents unintended motor operation in accordance with standard IEC/EN 61508 level SIL2, ISO 13849-1 performance level "d" (PL d) and IEC/EN 61800-5-2 (STO).

No additional power protection option is necessary. The Lexium ILS1 Integrated Drive can remain powered up, which reduces the system costs and the restart time.

The Safe Torque Off function is activated via two redundant 24 V input signals (active in OFF state).

Special technical features

- High continuous stall torque
- Good speed stability characteristics
- High encoder accuracy (0.018°)
- Integrated holding brake available as an option for ILS1M85 Integrated Drive
- Planetary gearbox available as an option

Lexium™ Integrated Drives Motion control

ILS1 with I/O interface for motion sequence

“Motion sequence” operating mode

Introduction

In “Motion sequence” operating mode, up to 16 movement instruction sets can be activated directly or sequentially via the logic input signals. The movement instructions can contain homing or positioning parameters, allowing a motion sequence to be saved in the drive, and controlled via the logic input signals.

The instruction sets are entered and the drive parameters set using the “Lexium CT” PC commissioning software.

Direct selection of movement instructions

Direct selection of movement instructions is used when a master controller is controlling the sequencing of the various instruction sets. The instruction set to be processed is selected and activated via the logic inputs.

Sequential selection of movement instructions

Sequential selection of movement instructions is used for processing simple motion sequences. Instruction sets are sequenced by entering a waiting time, a transition condition and the next instruction set.

An example of a transition condition: rising edge on the START logic input.

A motion sequence can also be executed cyclically, with or without return to the initial position.

Processing status of a movement instruction

The status of the movement instruction is indicated via the Handshake output. It is also possible to indicate an internal processing status such as “Drive in motion” via an additional output signal.

Selection of the motion profile

Speeds and accelerations are saved in motion profiles. The movement instruction set contains the list of motion profiles.

Other operating modes

Other operating modes can be set via the communication bus:

- Manual (JOG)
- Point-to-point
- Homing

Lexium™ Integrated Drives

Motion control

ILS1 with I/O interface for motion sequence

Integrated drive with
printed circuit board connectors

Connections

Lexium ILS1 Integrated Drives are connected via printed circuit board connectors.

Printed circuit board connectors

Printed circuit board connectors are used to connect the multifunction interface, the RS 485 serial link, the interface for 24 V signals and the Safe Torque Off function, as well as the power supply.

This integrated drive is connected via two cable entry plates, to be ordered separately (see accessories page 38).

Compliance with international standards and certifications

The Lexium Integrated Drives offer has been developed in accordance with strict international standards and recommendations for variable speed electrical power drive products, in particular IEC/EN 61800-3 (immunity to disturbance related to high frequency signals transmitted along cables) and IEC/EN 50178 (vibration resistance).

Compliance with electromagnetic compatibility requirements has been incorporated in the design of this integrated drive. The entire product range conforms to international standard IEC/EN 61800-3:2001, environment 2.

These integrated drives carry the CE mark in accordance with the European machinery directive (98/37/EEC) and the European EMC directive (2004/108/EEC).

The entire product range is cULus certified (United States and Canada).

It is also TÜV certified in accordance with the safety standards for medical devices and equipment. This certification covers:

- Functional safety of electrical/electronic/programmable electronic safety-related systems (IEC 61508: 2000; SIL 2)
- Safety of machinery – functional safety of safety-related electrical, electronic and programmable electronic control systems (IEC 62061: 2005; SILcl2)
- Safety of machinery – safety-related parts of electronic control systems – part 1: General principles for design (ISO 13849-1: 2006; PL d (category 3))

Maximum torque	Nm	2	4	6	4.5
Holding torque	Nm	2	4	6	4.5
Dimensions (overall in mm)	Without holding brake	W x H x D	85 x 119.6 x 140.6	85 x 119.6 x 170.6	85 x 119.6 x 200.6
	With holding brake	W x H x D	85 x 119.6 x 187.3	85 x 119.6 x 217.3	85 x 119.6 x 247.3

(2) Twinding only available for integrated drive with 85 mm flange (ILS1M853).

(3) Holding brake only available for integrated drive with 85 mm flange (ILS1M85).

Note: See all the data (specifications, dimensions) on our website www.schneider-electric.com.

Lexium™ Integrated Drives Motion control

ILS1 with pulse/direction (P/D) interface

ILS1 with pulse/direction (P/D) interface

Introduction

ILS1 Integrated Drives consist of a 3-phase stepper motor and control electronics with pulse/direction (P/D) interface. The pulse/direction (P/D) signals from a master controller – for example, a Lexium Controller, or the A/B signals from an encoder – are converted directly into a movement.

ILS1 Integrated Drives with 3-phase stepper motor provide high torques at low speeds of rotation. They are mainly used in rotation speed mode and have excellent speed stability characteristics for high resolution positioning.

The control section consists of control electronics and a power stage that have a common power supply and are thermally insulated from the motor. These control electronics are not electrically isolated.

ILS1 Integrated Drives can operate on a 24 V to 36 V --- supply.

ILS1 Integrated Drives control the stepper motor according to a reference value. This reference value is sent to the multifunction interface by a master controller or an external master encoder.

The number of steps per turn is set via the parameter switch.

ILS1 Integrated Drives with pulse/direction (P/D) interface have numerous interfaces:

- Multifunction interface
- Interface for four 24 V signals
- RS 485 serial link interface
- Interface for the integrated Safe Torque Off function

They are wired via a printed circuit board connector.

The commissioning of ILS1 drives with stepper motor is simplified, as they do not require any configuration of the control loop.

Interfaces

Multifunction interface

The multifunction interface takes one of the following signals, depending on the integrated drive model:

- 24 V signals separated by optical coupler (ILS1U)
- 5 V signals separated by optical coupler (ILS1V)
- 5 V differential signals without electrical isolation (ILS1W)

The reference values are sent via two signals, either as pulse/direction (P/D) signals, or as type A/B encoder signals.

The other signals have the following functions:

- Activation or locking of the power stage, and activation or locking of the indexing pulse
- Setting the number of steps or setting the motor phase current

RS 485 serial link interface

The RS 485 signal interface is used to connect an RS 485 serial link during configuration, commissioning or maintenance.

This signal interface is used to connect the Lexium CT PC software with a direct link, via an RS 485/

RS 232 or RS 485/USB converter, to access the fault log, temperature control and various other functions.

Interface for 24 V signals

Two input signals and two output signals are available.

The input signals have the following functions:

- Setting the number of steps
- Activation or locking of the power stage, and activation or locking of the indexing pulse

The output signals have the following functions:

- Drive ready
- Display a fault or indexing pulse

The 24 V power for the outputs is provided internally via the integrated drive's power supply.

Lexium™ Integrated Drives

Motion control

ILS1 with pulse/direction (P/D) interface

Interfaces (continued)

Interface for Safe Torque Off (Power Removal) safety function

The Safe Torque Off (Power Removal) safety function enables a category 0 or 1 stop to be performed in accordance with standard IEC/EN 60204-1 and/or prevents unintended motor operation in accordance with standard IEC/EN 61508 level SIL2, ISO 13849-1 performance level “d” (PL d) and IEC/EN 61800-5-2 (STO).

No additional power protection option is necessary. The Lexium ILS1 Integrated Drive can remain powered up, which reduces the system costs and the restart time.

The Safe Torque Off function is activated via two redundant 24 V input signals (active in OFF state).

Special technical features

- High continuous stall torque
- Good speed stability characteristics
- High encoder accuracy (0.018°)
- Integrated holding brake available as an option for the ILS1●85 Integrated Drive
- Planetary gearbox available as an option

Connections

Lexium ILS Integrated Drives are connected via printed circuit board connectors.

Printed circuit board connectors

Printed circuit board connectors are used to connect the multifunction interface, the RS 485 serial link, the interface for 24 V signals and the Safe Torque Off function, as well as the power supply.

The ILS1 integrated drive is connected via two plates for cable entry plates, to be ordered separately (see accessories page 38).

Integrated drive with printed circuit board connectors

Main functions

Configuration by parameter switch

The following functions can be set on ILS1 Integrated Drives via the parameter switch:

- Number of steps
- Motor phase current
- Reduction of motor phase current
- Input signal functions:
 - ☐ Transmission of the reference value via pulse/direction (PULSE/DIR) or encoder (A/B) signals
 - ☐ Activation/locking of the power stage (ENABLE/GATE input signal)
 - ☐ Activation/locking of the indexing pulse (ENABLE/GATE input signal)
 - ☐ Modulation of the motor phase current via a PWM signal (PWM/STEP2_INV input signal)
 - ☐ Increase/decrease the number of steps by a factor of 10 (PWM/STEP2_INV input signal)
- Output signal functions:
 - ☐ Display a detected fault (FAULT/INDEXPULSE output signal)
 - ☐ Indexing pulse signal (FAULT/INDEXPULSE output signal)
 - ☐ “Drive ready” signal (ACTIVE output signal)
- Blocking detection
- Activation of the RS 485 line terminator
- Activation/deactivation of the Safe Torque Off function

Lexium™ Integrated Drives

Motion control

ILS1 with pulse/direction (P/D) interface
ILS1 with 3-phase stepper motor

Description

ILS1 Integrated Drives consist of control electronics with pulse/direction (P/D) interface and a 3-phase stepper motor.

They are available with printed circuit board connectors.

For ILS1M85 Integrated Drives, an integrated holding brake is available as an option.

- 1 3-phase stepper motor
- 2 Electronic unit
- 3 Cable entry plate (see accessories page 38)
- 4 Parameter switch
- 5 Cover
- 6 Connection terminals

Lexium™ Integrated Drives Motion control

Option: GB● planetary gearboxes

GBX planetary gearbox

GBY angular planetary gearbox

GBK adaptor kit

Introduction

In many cases, motion control requires the use of a planetary gearbox to adapt speeds of rotation and torque, while providing the precision demanded by the application.

To meet these requirements, Schneider Electric has chosen to use Neugart GBX planetary gearboxes and GBY angular planetary gearboxes which are ideal for integrated drives. These gearboxes are lubricated for life, and are easy to install and operate.

Combining integrated drives with the most adaptable planetary gearboxes makes them very easy to mount, and ensures simple, risk-free operation.

These gearboxes are designed for applications which are not susceptible to mechanical backlash. They have a keyed shaft, are lubricated for life and conform to IP 54 degree of protection.

GBX planetary gearboxes are available in three sizes (GBX 40, GBX 60, GBX 80) with 11 reduction ratios (3:1 ... 40:1).

GBY angular planetary gearboxes are available in two sizes (GBY 60, GBY 80) with 7 reduction ratios.

GBK adaptor kits are also offered for assembling the integrated drive and the GB● planetary gearbox (see page 45).

This adapter kit includes:

- An adaptor plate
- Shaft end adaptor, depending on the model (depends on the integrated drive/planetary gearbox combination)
- Mounting accessories for mounting the plate on the planetary gearbox
- Mounting accessories for mounting the integrated drive

The tables on pages 43 and 44 give the most appropriate integrated drive/gearbox combinations.

For other combinations or any additional information about the specifications of the integrated drives, see the integrated drive data sheets or our website www.schneider-electric.com.
