Manual Starters and Switches

Fractional Horsepower Manual Starters with Melting Alloy Thermal Overload Relay—Type F

Type FG2P

Fractional Horsepower Manual Starters with Melting Alloy Thermal Overload Relay—Type F

Application Data

Type F fractional horsepower starters provide overload protection as well as manual On-Off control for small motors in a variety of industrial and commercial installations. Typical applications include fans, conveyors, pumps, and small machine tools.

Both one-pole and two-pole versions are suitable for use with AC single-phase motors rated up to 1 hp. Two-pole starters can also be used with DC motors rated up to 0.75 hp.

Table 1: Electrical Ratings

Voltage Rating	277 Vac maximum (1 or 2 pole) 230 Vdc maximum (2 pole only)
Continuous Current Rating	16 A

Table 2: Horsepower Ratings

Volts	Maximum Horsepower		
	AC Single Phase		DC
	1 Pole	2 Pole	2 Pole Only
115	1	1	0.75
230	1	2	0.75
277	1	1	—

Type FO2

Enclosures: NEMA 1 surface mounting enclosures are sheet steel with a thermoplastic wrap-around cover for convenience in wiring. The NEMA 1 enclosure is also available in an oversized version that allows more space for wiring. A zinc alloy die casting is used for NEMA 4 enclosures, and a cast aluminum enclosure is offered for NEMA 3R, 7 & 9 applications.

Pilot Light: Red or green pilot light units are available factory installed in NEMA 1 surface- and flush-mounting enclosures and in NEMA 4 enclosures. They are also available as a field modification kit for NEMA 1 enclosures and gray flush plates.

For a red pilot light, use the order number as is. For a green pilot light, add a **G** to the number.

Handle Guard/Lock-Off: An optional handle guard on NEMA 1 enclosed starters prevents accidental operation of the toggle operator and allows the toggle operator to be padlocked in either the On or Off position.

The handle guard can be factory installed on NEMA 1 enclosed starters. It is also available in kit form for field installation on NEMA 1 surface- and flush-mounting enclosures. Standard NEMA 4 and NEMA 3R, 7 & 9 enclosures include provision for locking in the Off position.

Terminals: Binder head screw-type terminals are suitable for 10 AWG or smaller copper wire, and are accessible from the front. All terminals are clearly marked.

Mounting: Open types without a pilot light fit standard single-gang switch boxes, and can be used with any cover plate having a standard toggle cutout. Single-unit flush mounting types, including those with a pilot light, are suitable for wall mounting in a standard switch box or for machine cavity mounting without a box.

Operator: Available with toggle handle or with removable key-type operator to discourage unauthorized operation.

Thermal Units: Starters will not operate without a properly installed thermal unit. Install the thermal unit so that the markings face the front of the starter.

Emergency Off Actuator: A toggle operator extender is available for NEMA 1 surface-mounted units. The extender has a red vinyl button that provides a fast and easy method for locating and switching the device's toggle operator into the Off position. The Emergency Off Actuator is available in kit form only for field installation.

Table 6: Two Speed Starters (Class 2512)

Type F two-speed manual starters are designed for the control of small single-phase AC motors that have separate windings for high and low speed operation. Two toggle-operated starters are used, with overload protection included for each motor winding. Surface mounting devices, and those with a gray flush plate, utilize a mechanical interlock which allows direct control of the motor by means of the toggle operators.

^[1] For a green pilot light, add the letter **G** to the catalog number (for example, **2510FG02PG**).

Manual Starters and Switches

Manual Switches—Type K Reversing, Non-Reversing, Two Speed

Type KG1A

Manual Switches—Type K Reversing, Non-Reversing, Two Speed

Application Data

Type K motor starting switches provide manual On-Off control of single- or three-phase AC motors, where overload protection is not required or is provided separately. These devices are suitable for use with three-phase AC motors rated up to 20 hp. Compact construction and a 600 V rating make these switches suitable for a wide range of industrial and commercial uses. Typical applications include small machine tools, pumps, fans, conveyors, and many other types of electrical machinery. They can also be used on non-motor loads such as resistance heaters.

Table 7: Electrical Ratings

Voltage Rating	600 Vac maximum 230 Vdc maximum
Continuous Current Rating	30 A at 600 Vac maximum (20 A at 600 Vac maximum for NEMA 3R and 7 & 9 enclosed) 30 A at 24 Vdc maximum

		3	3-Phase Constant Horsepower	2	7.5	10	10	1	2	1.5

Type KO2

Enclosures: NEMA 1 surface-mounting enclosures are sheet steel with a thermoplastic wrap-around cover for convenience in wiring. The NEMA 1 enclosure is also available in jumbo and oversized versions that allow more space for wiring. A zinc alloy die casting is used for NEMA 4 enclosures, and a cast aluminum enclosure is offered for NEMA 3R and 7 & 9 applications.

Mounting: Open types without a pilot light fit standard single-gang switch boxes, and can be used with any cover plate having a standard toggle cutout. Single-unit flush-mounting types, including those with pilot light, are suitable for wall mounting in a standard switch box or for machine cavity mounting without a box. For difficult wall surfaces, such as concrete block or tile, a jumbo size flush plate is recommended. See the dimensional drawings for additional details and mounting provisions of enclosed types.

Pilot Light: Red or green pilot light units are available factory installed in NEMA 1 surface- and flush-mounting enclosures and in NEMA 4 enclosures. They are also available as a field modification kit for NEMA 1 enclosures and gray flush plates.

For a red pilot light, use the order number as is. For a green pilot light, add a **G** to the number.

Operator: Available with a toggle handle or with a removable key-type operator to discourage unauthorized operation.

Emergency Off Actuator: A toggle operator extender is available for NEMA 1 surface-mounting units. The extender has a red vinyl button that provides a fast and easy method for locating and switching the device's toggle operator into the Off position. The Emergency Off actuator is available in kit form only for field installation.

Class 3211 05

Table 11: Reversing (Class 2511)

Type K reversing manual switches provide a compact means of starting, stopping, and reversing AC motors where overload protection is not required or is provided separately. They are suitable for use with three-phase squirrel cage motors and for single-phase motors that can be reversed by reconnecting motor leads. Two switches are used, one to connect the motor for forward rotation and one for reverse.

Operator Style	No. of Poles	Suitable Motor Types	Features (Includes Mechanical Interlock)	NEMA 1 General Purpose Enclosure Surface Mounting	With Flush Plate for Cavity Mounting (Without Pull Box)	Replacement Switch Class 2510

Class 2510, 2511, 2512 Integral Horsepower Starters—Types M and T

Application Data

Types M and T integral horsepower manual starters provide convenient On-Off operation of small single-phase, polyphase, or DC motors. Typical applications include small machine tools, pumps, fans, and conveyors. They feature push button or toggle operators and reliable overload protection. Pilot lights and auxiliary contacts are available. For modifications, see page 17.

Size: Available in NEMA Sizes M-0, M-1, and M-1P

Poles:

AC: Two poles single-phase; three poles polyphase

DC: 2 poles (3 poles in series)

Voltage Rating: 600 Vac maximum, 250 Vdc maximum

Overload Relays: Melting alloy thermal overload relays have provisions for one Type B thermal unit for single-phase starters, or three Type B thermal units for three-phase starters. *All thermal units must be installed, and the device reset, before the starter contacts will operate.* After an overload relay trips, wait one or two minutes before resetting to allow the alloy to solidify.

Operator: Open and NEMA 1 versions are available with a push button or toggle operator. NEMA 4 and 12 are available with a direct-acting push button only. NEMA 4X and 7 & 9 use an external toggle to actuate a push button device inside.

Mechanism Lock Off: Open devices and starters in the following enclosures can be locked in the Off or Stop position: NEMA 1 surface and flush mounting; and NEMA 4, 4X, 7 & 9, and 12.

Devices in the following enclosures can also be locked closed to prevent unauthorized entry: NEMA 1 surface mounting; and NEMA 4, 4X, and 12. NEMA 7 & 9 enclosures are bolted closed.

Table 16: Terminals

NEMA Size	Power Terminals		Auxiliary Interlock Terminals	
	Type of Lug	Wire Range Solid or stranded copper wire	Type of Lug	Wire Range Solid or stranded copper wire
M-0	Pressure Wire	14–8	Pressure Wire	16–12
M-1	Pressure Wire	14–8	Pressure Wire	16–12
M-2	Box Lug	14–6	Pressure Wire	16–12

Table 17: Maintenance of Equipment

For proper performance, all equipment should be periodically inspected and maintained.

Replacement contacts and interlocks are available in kit form to facilitate servicing and stocking.

In addition, the instruction bulletin listed in the following table contains an exploded view of the device with components clearly marked for easy identification by description and part number.

NOTE: Consult instruction bulletin 30072-013-19 (312AS).

Accessories and Modification Kits: One auxiliary contact, either N.O. or N.C., can be easily added internally to any open or enclosed Type M or T manual starter. It occupies the space provided in either the upper right or left corners of the device. These contacts are for AC loads only.

A unique red pilot light assembly that clips into place is available factory-installed on NEMA 1, 4, 4X, 12, and flush enclosures. The assembly is also available as a field modification kit for NEMA 1 surface or flush mounting enclosures. The color cap assembly snaps into a knockout in the enclosure cover on the NEMA 1 enclosures. Pilot light kits are available for use on various voltages, 110–600 V. (Pilot light assemblies are not available for NEMA 7 & 9 enclosures.)

Class 2511 reversing manual starters consist of two mechanically interlocked Class 2510 Type M or T manual starters. They are available in NEMA 1 surface-mounting enclosures or as open type.

Class 2512 two-speed manual starters are for wye-connected separate winding motors only. They consist of two mechanically interlocked Class 2510 Type M or T manual starters.

Starters will not operate unless the thermal units have been properly installed (with the markings facing the front of the starter) and the device has been reset.

Description	Factory Modifications: Form Number	Field Modifications: Kit Class and Type
Red Pilot Light ^[1]	P11 ^[2]	9999MP1 (110–120 V) 9999MP2 (208–240 V) 9999MP3 (440–600 V)
Auxiliary Contacts ^[3]	X1 (1 N.O.) X2 (1 N.C.)	9999SX11 (N.O.) 9999SX12 (N.C.)
Jumper Straps ^[4]	N/A	9998SO31
Contact Only	Y76 (does not change starter dimensions)	N/A

^[1] Can only be field-added to NEMA 1 enclosures.

^[2] P11 pilot lights require a voltage code.

^[3] For proper operation, only one auxiliary contact kit per device is allowed to be added.

^[4] For controlling a single-phase motor with a three-phase starter.

Manual Starters and Switches

Class 2601 Reversing Drum Switches

Type AG2

Type AW2

Class 2601 Reversing Drum Switches

Reversing drum switches are designed to start and reverse motors by connecting them directly across-the-line. The devices can be used with squirrel cage motors; single-phase motors designed for reversing service; and series, shunt, and compound DC motors. The applications should be such that across-the-line starting of the motors is not objectionable, unless other means is provided for limiting starting current and torque. Class 2601 drum switches are field convertible from maintained to momentary operation.

Application Data

The reversing drum switches are particularly suited for use in manual reversing control applications such as machine tools, woodworking machines, and similar types of equipment. Examples include lathes, milling machines, planers, grinders, shapers, and boring mills. Other possible applications include door operators, small hoists, and conveyor belts.

Overload and low-voltage protection are not incorporated into these reversing drum switches. Should the power fail, the contacts will remain closed unless assembled for momentary operation, and the handle will stay in the selected position. The motor will restart when the power returns.

Voltage	600 Vac Maximum 250 Vdc Maximum
Contact Mechanism	Large movable contact segments are rigidly attached to the main operating shaft. They are fully insulated from each other and from the shaft. Stationary contact fingers are mounted in polymeric blocks. Both movable and stationary contacts are plated for maximum life. Easily accessible terminals are provided to simplify wiring. Type A is provided with screw-type terminals and Type B is provided with pressure-wire connector terminals. Contacts are not replaceable.
Operating Mechanism	The operating mechanism is factory assembled for Maintained Position operation. That is, when the handle is moved to the forward or reverse position, it will remain there until moved. The mechanism can easily be converted to provide Spring-Return-to-Off operation, with no additional parts needed. This conversion is accomplished by removing the handle screw and handle, turning the shaft 180 degrees, and then replacing the handle and handle screw.
Handles	Both the NEMA 1 and NEMA 4 devices come standard with a one-piece molded handle.
Enclosures	The polymeric NEMA 1 enclosure is suitable for indoor applications when normal atmospheric conditions prevail. The NEMA 4 enclosure is suitable for applications requiring watertight and dusttight capabilities. Generous wiring space is provided in both types. Two knockouts or openings for 1/2 in. conduit entries are located in the bottom plate of Types AG and BG, while two 1/2 in. conduit entries with hubs come standard on Types AW and BW. A single captive screw holds the cover on NEMA 1 enclosures, while three captive screws hold the cover on NEMA 4 enclosures. Removing the cover allows free access to three sides of the switch mechanism. Large, legible nameplates are securely attached to the enclosures to clearly indicate switching positions and to provide complete rating information. An instruction sheet showing typical motor connections is also included.
