NETWORK MEDIA

TURCK's global support network consists of over 2,700 employees in 25 countries and 60 exclusive agencies worldwide that strive to meet customer expectations. Our sales, support and manufacturing facilities are strategically located across the world allowing us to respond to local market conditions and deliver customer specific solutions on a timely basis.

We are a world leader in **automation technology** with a diverse and broad product portfolio that provides customer specific applications with high performance, reliable and cost effective solutions. The synergy in our product portfolio and customization flexibility are key components of our value proposition.

Our expertise spans across two major industry categories: **Industrial Automation** and **Process Automation**. Each weighs in with its own unique requirements and methods of conducting business. This market centric approach ensures that we develop application specific solutions across a variety of vertical market segments.

SOLUTIONS FOR MOBILE EQUIPMENT

Krisz Szklarlatowski

TURCK's broad line of solutions specially designed for industrial vehicle and mobile equipment manufacturers has led to product innovations and ease of operations for customers worldwide. We strive to provide products of exceptional quality that may be used in harsh applications – and we are able to customize our solutions based on your specifications.

Our extensive line of solutions includes advanced sensors and encoders for position detection of booms, outriggers, seats, doors and gates. Level indication may be determined with TURCK's line of inclinometers, and our cordsets and junction boxes help you streamline wiring and connect your components with ease.

Sensing Solutions

- Inductive Position Sensors
- Pressure Monitoring Sensors
- Angular Position Sensors
- Rotary Position Sensors

Features:

- Non-contact technology provides longer service life
- Able to withstand heavy shock and vibration
- Extended temperature ranges
- Ease of installation
- Superior noise immunity
- Low operating voltage
- Exceptional sealing

Connectivity Solutions

- Cordsets
- Junction Boxes

Features:

- Rugged junction box housing
- Quick disconnect connectors
- Vibration immune connectors
- IEC IP 67 and NEMA 6P protection
- Excellent abrasion and cut-through resistant PUR jacketed cordsets

Solutions For Mobile Equipment

Inductive Position Sensors Page 8

High degree of protection

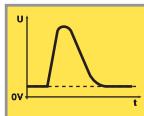

IP 67 plus IP 68 and IP 69k:

- 24 hrs. continuous storage at 70°C
- 24 hrs. continuous storage at -25°C
- 7 days submersion, depth 1 m, 10 temperature changes from 70°C to -25°C, each temperature for 1 hour
- IP 69k, suitable for high pressure steam-jet cleaning to DIN 40050-9, following EN 60529

Load dump protection

Test pulse 5 to DIN ISO 7637-2 / SAE J 1113-11 emulates the disconnection pulse of the battery charging current. This pulse occurs if a battery is disconnected while the generator is supplying charging current. This may occur if a battery is disconnected while the motor is running due to corrosion, a poor connection or intentionally. In addition, the mobile equipment sensors passed test pulses 1-4 per DIN ISO 7637-2 with 12 V and 24 V systems.

Resistance to vibration and mechanical shock

TURCK mobile equipment sensor series is ideally equipped to withstand continuous vibrations and shocks. The sensors are vibration proof up to 3000 Hz, 20 g, and can withstand continuous shocks of 100 g in 3 axes.

- EN 60068-2-6 (vibration resistance): 20 g; 10-3000 Hz; 50 cycles; 3 axes
- EN 60068-2-27 (shock resistance): 40 g; 6 ms; 4000 x each; 3 axes
- EN 60068-2-30 (continuous shock resistance) 100 g; 11 ms, 1/2 sinusoidal; 3 x each; 3 axes

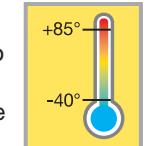

Excellent EMC immunity

The mobile equipment sensor series for utility vehicles meets more requirements than stipulated by DIN ISO 7637-2 (conducted and emitted electrical interference - Part 2: Vehicles with 12 V or 24 V systems) and DIN EN ISO 14982 for the severe radiated and line-conducted interference usually present in vehicles.

Extended temperature range

From -40°C to 85°C or from the polar region to the Sahara: The extended temperature range of the sensors allows worldwide use. Even the radiant heat up to 85°C emitted from motors, gears or exhaust systems cannot damage these sensors. Extreme temperature changes as defined by DIN 60068-2-14 (temperature change, -40°C to 85°C; 20 cycles) are not a problem.

Plug & play with standard automotive connectors

On request, TURCK can also supply the sensors with short cables and connectors, as commonly used with standard makes in the automotive sector: Deutsch, Packard and Molex are just some examples. This makes connection on the prefabricated cable harness a simple plug & play operation with a proven connection technology.

Pressure Monitoring Sensors Page 14

The TURCK pressure transmitters (PTs) are designed to meet the rugged demands of the hydraulic systems in mobile applications.

Pressure transmitters have the following features making them ideal for mobile equipment applications:

- Fixed range to 8700 psi.
- No calibration needed
- 4-20 mA and 0-10 DC outputs
- Stainless housing
- Robust ceramic element
- M12 connection
- IP 67

Angular Position Sensors Page 12

TURCK inclinometer products utilize cutting edge technology to provide level feedback in a compact, yet rugged package. Engineered using MEMS (micro-electromechanical system) technology, these dual axis sensors are designed to help keep your equipment within their safe operating limits in the most challenging, rugged environments.

- Inclinometers offer 2-axis control from a single IP 67 housing
- Temperature ranges from -40°C to 85°C
- Robust, fast, stable and precise
- Input voltages from 10 VDC to 30 VDC
- Analog outputs in Logic Control compatible 0.1 – 4.9 VDC and 4-20 mA versions
- Factory level setpoints are easily teachable to local terrains and equipment setups
- Standard available measuring ranges are +/- 10°, +/- 45°, +/- 60°, +/- 85°
- Custom ranges are available up to +/- 85°

Cordset Solutions Page 18

TURCK's standard connectivity products can be tailored specific to your needs. TURCK's experienced engineers work to provide you with an application specific solution that allows you to consolidate all types and styles of automation connectors.

Examples include:

- Sizes from the sub-miniature M5 to the 35 Amp M40 power connector
- 2 through 28-pin connectors, IP 67 protection
- Custom harness and cable assemblies
- Private wrap labeling
- Color coded wires
- Custom printed snap-in labels

Rugged, Sealed Junction Boxes Page 20

Consolidate wiring in any application or environment. TURCK offers a wide array of junction box styles to suit your application.

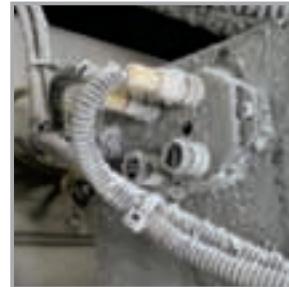

- 4, 6 or 8 ports, with or without LEDs for NPN or PNP sensors
- Integral cable or quick disconnect versions
- M5, M8, M12, 1/2" and 7/8" connector types
- Cast aluminum or plastic fully-encapsulated, IP 67 and NEMA 6P protection

Rotary Position Sensors Page 22

TURCK encoder products offer flexible solutions providing you with the tools to solve even the most demanding positioning applications. Regardless of your environment, our engineers are ready to help you choose the right solutions for your specific requirements.

- Encoders available from -40°C to 90°C and IP 69K
- Heaviest standard bearings in the industry
- Rugged, die cast aluminum and optional stainless steel housings
- Popular fieldbus networks including SSI/BiSS, CANopen, and J1939
- Speeds up to 12,000 RPM, standard
- Draw wire lengths up to 40 meters
- M12, M23, MS 6, MS7, and MS10 standard connector types
- Input voltages from 5 VDC to 30 VDC

Dual Axis Inclinometer Sensor

The TURCK inclinometer is a dual axis sensor for angular tilt detection. These sensors feature compact rectangular housings, and may be mounted up to a maximum of +/- 85 degree angles. Inclinometer sensors may be used in a wide variety of applications to solve unique feedback requirements where the customer needs to level platforms, control tilt angle or control a dancer.

The new TURCK inclinometer measures angular tilt in reference to gravity. At the heart of the TURCK inclinometer is a MEMS (micro-electro-mechanical system) device that incorporates a micro-electromechanical capacitive element into the sensor that utilizes two parallel plate electrodes, one stationary and one attached to a spring-mass system. Movement causes acceleration that produces deflection in the non-stationary electrode. This results in a measurable change in the capacitance between the two plates that is proportional to the angle of deflection. These signals are conditioned to provide two analog outputs (0.1-4.9 VDC) or two current outputs (4-20 mA). The micro board design in the MEMS technology allows for a compact, precise inclinometer in a very robust, industrialized package. The inclinometer is IP 67 rated, with a temperature range of -30°C to 70°C. The sensor is also available in the optional -40°C /S97 option.

Note: Operating temperature of -40°C available with /S97 option.

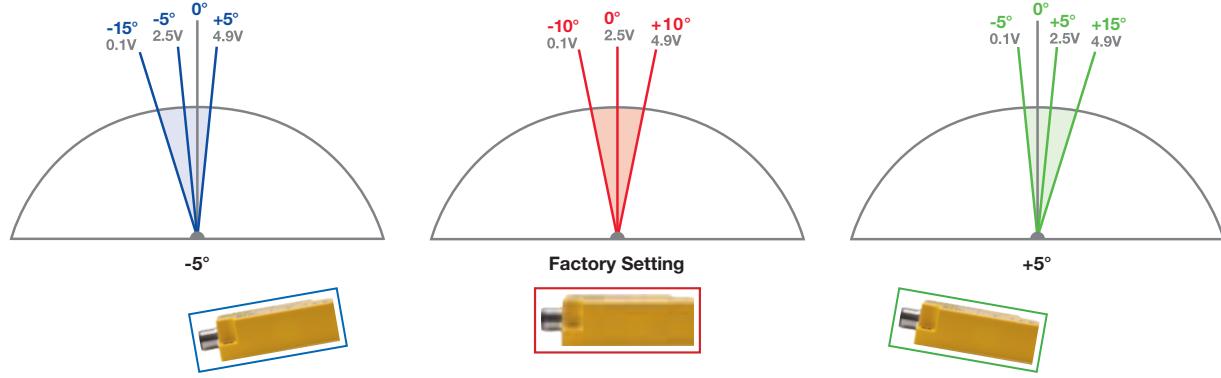

Zero Setpoint Teach Function

The zero point, or level reference, of the inclinometer may be reset to the unique grade of your application. Depending on the model, it is adjustable up to +/- 15 degrees from the factory setting of absolute horizon level. This allows you to effectively shift the sensing window to accommodate slightly non-level rest positions of your equipment, such as the difference between an empty and a loaded dump truck. We offer a teaching pendant to make this a simple, single push-button task.

Optional Teaching Pendant: VB2-SP4

Inclinometer Teach Range Example : B2N 10H-Q20L60-2LU3-H1151

Note: Integral cable and side exit connector home run options available

Features:

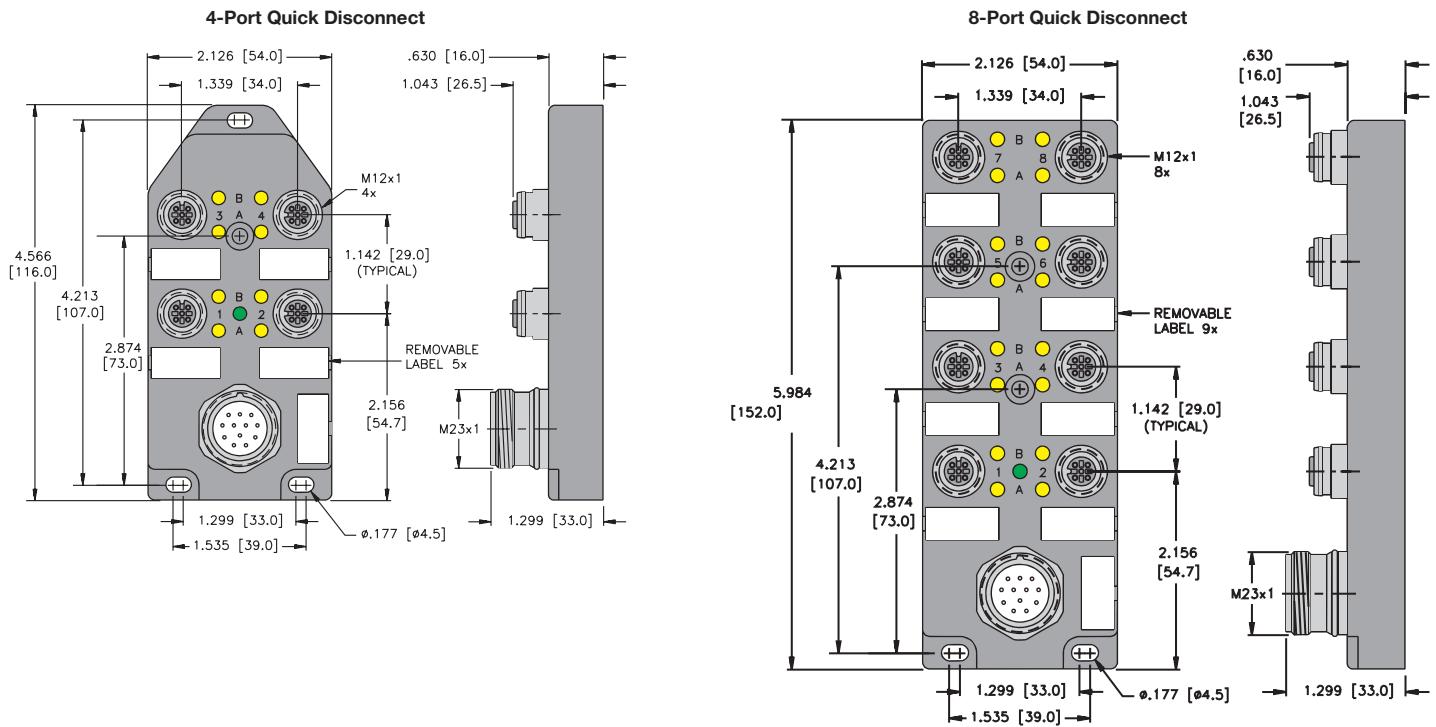

- Dual Output per port
- Rugged Plastic Housing
- Available with or without LEDs
- M23 Quick Disconnect Homerun Cable
- Threaded M12 Connections
- Corrosive Resistant
- NEMA 1, 3, 4, 6P and IEC IP 67

Specifications:

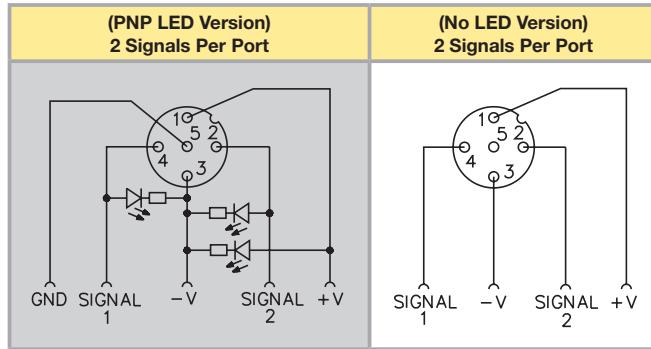

- Housing:** Nylon
Connectors: M12 *eurofast*®: Nylon or PUR, spacings to VDE 0110 Group C
Contacts: Gold plated brass
Thread Inserts: Nickel plated brass
LED Current: 10 mA maximum at 48 VDC supply voltage (per LED)
Temperature: -30°C to +80°C (-22°F to +176°F)
Accessories: VZ 3 closure caps and a VZ 12 label kit included
Recommended Splitter: YB2-FSM 4.5-2FKM 4.5

Rotary Position Sensors for Mobile Equipment

Absolute Singletturn Encoder Type T8.2450/T8.2470

locked bearing

temperature

Non-contact measuring system with long service life, high reliability, high resolution, 12 Bit (4096 various positions at 360°)

Absolute Singletturn, SSI, **shaft T8.2450**
Absolute Singletturn, SSI, **hollow shaft T8.2470**

- Output SSI (12 Bit)
- Rugged cable outlet, high strain relief thanks to multiple clamping
- Wide range of power supply
- 5 VDC or 8-30 VDC

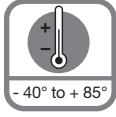

For complete specifications please visit www.turck.com/SSI

Sendix Absolute, Singletturn Encoder Type T8.3651/T8.3671 and T8.3658/T8.3678

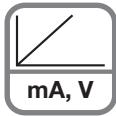

Safety-Lockplus™

temperature

high IP value

mA, V

shock resistant
vibration resistant

CANopen

New magnetic singletturn encoder that provides all-round protection thanks to **Safety-Lockplus™** and **Sensor-Protect™** technology.

- Output: 4-20 mA, 0-10 V, or CANopen
- Wide range of temperature -40° to 85°C
- Resolution 12 Bit (4-20 mA, 0-10 V)
- Resolution 14 Bit (CANopen)

Sensor-Protect™

Fully encapsulated electronics;
separate mechanical bearing assembly

Safety-Lockplus™

IP 69k protection on the flange side;
robust bearing assemblies with
interlocking bearings; mechanically
protected shaft seal

For complete specifications please visit www.turck.com/Magnetic

Draw Wire Encoders A50, B80, C120, D135

wide temperature range

shock resistant vibration resistant

IP

high IP value

reverse polarity protection

- Specially designed for demanding applications
- For use with analog sensors (0-10 V, 4-20 mA, potentiometer) or encoders (Incremental, Absolute, Fieldbus)
- Measurement length from 250-40,000 mm
- High speed
- High acceleration

Dynamic spring traction by means of a constant force spring, long service life, approximately 2 million complete cycles.

- Simple wire fixing using clip
- Quick mounting
- Diamond-polished ceramic guide
- Titanium anodised aluminium housing

For complete specifications please visit www.turck.com/DrawWire

Slip Rings

In general, slip rings are used to transmit power, signal or data from a stationary to a rotating platform.

Advantages and benefits:

- Rugged design for industrial use
- Modular system construction, load and signal channels can be combined selectively
- Long service life and long maintenance cycles
- Separate signal channels
- Fieldbus signals such as PROFIBUS®, CANopen, etc. (up to 12 MB)

Application areas for Slip Rings:

- Packaging machines
- Textile machines
- Robots and handling equipment
- Cranes
- Pipeline inspection systems
- Video surveillance (CCTV) equipment
- Amusement park rides
- Bottling plants
- Rotary tables
