Series	CKZ2N		
Bore size (mm)	ø50 Equivalent	ø63 Equivalent	ø80 Equivalent
Arm opening angle	30°, 45°, 60°, 75° 90°, 105°, 120°, 135°		
Switch	TURCK/P&F		
Port thread type	G/NPT		

Series CKZ2N

Model Selection

1 Common precautions for each size

- 1) Use air filtered through a 5- μ m-element filter.
- 2) Before piping is connected to the slim-line power clamp cylinder it should be thoroughly flushed with air.
- 3) Only use the clamp arm in our catalog. Do not weld an arm to the cylinder.
- 4) Make sure to use a speed controller and adjust it to more than 1sec. when changing from clamping to unclamping (or vice versa).

2 Slim-line power clamp cylinder mounting

When clamping by using clamping force only
Example)

Mounting process

Procedure

- A) Place the workpiece, supply air at clamp side without installing clamping block, operate the clamp arm to the end of clamp.
- B) Under the above conditions, adjust shim so that the space between the workpiece and the clamping block is about 0 mm. Theoretically there is no clamping force for holding a workpiece under this condition.
- C) In order to generate clamping force from the state described in step B, insert additional shim. The thickness of the shim differs depending on the arm length and pressure, so please refer to the graph on page 158 as a guide. About 10% error may occur due to the difference in tolerance of the power clamp cylinder body.

Model Selection

2 Slim-line power clamp cylinder mounting

Relation between shim thickness and clamping force

Note) When a shim that exceeds the clamping force peak plotted on the graph is inserted, the self-locking mechanism doesn't work.
Insert a shim with appropriate thickness.

* Arm length “L” indicates the distance between the clamp arm shaft and the clamping position.
For distance “A” between knock positioning pinhole and clamp arm shaft, refer to the Table 1.

Model Selection

2 Slim-line power clamp cylinder mounting

When using a hard stop

Mounting process

Procedure

- Supply air at clamp side without installation of upper hard stop, and operate the clamp arm to the end of clamp.
- Under the above conditions, adjust shim ① so that the space between the upper hard stop and the lower hard stop is about 0 mm. Theoretically there is no clamping force to the lower hard stop under this condition.
- In order to generate clamping force from the state described in step B, insert additional shim. The thickness of the shim differs depending on the arm length and pressure, so please refer to the graph on pages 158 and 159 as a guide. About 10% error may occur due to the difference in tolerance of the power clamp cylinder body.
- Under the state described in step C, adjust shim ② so there is contact between the clamping block and the workpiece.

When using the side guide

Precaution

When using the side guide to the clamp arm to prevent lateral motion, make sure not to apply a lateral load or galling to the clamp arm.

3 Clamp arm

Use the clamp arm in the catalog.

The length of the clamp arm "L" should be the length given below or less.

Model	Arm length L
CKZ2N50	150 mm
CKZ2N63	300 mm
CKZ2N80	400 mm

Relation between clamp arm length and clamping force

Allowable load for clamp arm end

Refer to the graph on page 162 for parts weight of the arm.

Note) The value shows parts weight only, it does not include arm weight.

Single-side-arm type (R/L)

Use within the allowable arm end load range according to the distance "L" from the fulcrum to the mounting tool's center position and the arm opening angle "θ".

Two-side-arm type (D)

Consider the weight of allowable arm end load according to the center position "G" of each arm end load ($W_1 + W_2$), the distance "L" to the fulcrum and the arm opening angle "θ". Use within the allowable range of ($W_1 + W_2$), in this case.

5 Arm opening angle change

8 types of arm opening angles (unclamping angles) 30°, 45°, 60°, 75°, 90°, 105°, 120° and 135° are available for each standard size.

Arm opening angle change procedure

- 1) Make sure to completely exhaust the air in the cylinder.
- 2) Remove the switch cassette

- 3) Remove the dog of the “A”part, and mount a different dog for other angles using the tightening torque below. (Confirm the direction of the angle display.) Then mount the switch cassette using the tightening torque below.

Description	Bore size (mm)	Tightening torque	
		N · m	lbf · in
Dog	50	3.0 to 4.0	27 to 35
	63	3.0 to 4.0	27 to 35
	80	3.0 to 4.0	27 to 35
Switch cassette	50	5.0 to 7.0	44 to 62
	63	5.0 to 7.0	44 to 62
	80	5.0 to 7.0	44 to 62

- 4) Remove the stopper bolt of the head cover, and mount a different stopper bolt for other angles using the tightening torque below. (Confirm the direction of the angle display.)

Description	Bore size (mm)	Tightening torque	
		N · m	lbf · in
Stopper bolt	50	130 to 150	1150 to 1327
	63	160 to 200	1416 to 1770
	80	480 to 520	4248 to 4600

Arm / Ø63
Straight-Plain

Technical drawing of a mechanical part, likely a shaft or axle, showing dimensions and labels A through Q.

Dimensions and Labels:

- A:** Total length of the shaft.
- B:** Distance from the left end to the first hole.
- C:** Distance between the first and second holes.
- D:** Distance between the second and third holes.
- E:** Distance between the third and fourth holes.
- F:** Distance between the fourth and fifth holes.
- G:** Distance between the fifth and sixth holes.
- H:** Distance between the sixth and seventh holes.
- I:** Distance between the seventh and eighth holes.
- J:** Distance between the eighth and ninth holes.
- K:** Distance between the ninth and tenth holes.
- L:** Distance between the tenth and eleventh holes.
- M:** Distance between the eleventh and twelfth holes.
- N:** Distance between the twelfth and thirteenth holes.
- O:** Distance between the thirteenth and fourteenth holes.
- P:** Distance from the left end to the center of the last hole.
- Q:** Distance from the center of the last hole to the right end.

Other Dimensions and Features:

- Ø8F7^{+0.028}_{+0.013} through**: Hole size and tolerance for the first hole.
- Ø11 through**: Hole size and tolerance for the last hole.
- 12.5**: Distance from the left end to the center of the first hole.
- 25^{+0.03}**: Total length of the shaft.
- 30^{+0.025}**: Distance between the first and second holes.
- 18^{+0.03}**: Distance from the center of the last hole to the right end.
- 33**: Distance from the center of the last hole to the right end.
- 4**: Distance from the center of the last hole to the right end.
- 15^{+0.03}**: Distance from the center of the last hole to the right end.
- M8 x 1.25**: Thread specification for the last hole.
- R28**: Radius of the last hole.
- Ø6.5**: Hole size for the last hole.
- 12.5**: Distance from the left end to the center of the first hole.
- 20**: Distance from the left end to the center of the first hole.
- 22**: Distance from the left end to the center of the first hole.
- 22**: Distance from the left end to the center of the first hole.
- R7**: Radius of the last hole.

20 mm Onset-Flank

Technical drawing of a 20 mm Onset-Flank tool. The drawing shows a side view and a cross-section. The side view indicates a total length of 250.03 mm, a width of 37 mm, and a distance 'A' from the tip to the start of the main body. The cross-section shows a circular end with a radius of R50, a central hole of diameter 8.5 mm, and a thread of M8 x 1.25. Other dimensions include R27, 22 mm, 57.4105 mm, 12.5 mm, 20 mm, and R7.

Series CKZ2N Made to Order 1

Contact SMC for detailed dimensions, specifications and delivery.

1 Power clamp cylinder with metal cover

- Applicable model
CKZ2N50, 63, 80
- Applicable to Arc-melting-resistant line
- In addition to the existing rubber cover type, Opening/closing metal cover type is available for releasing part of the toggle construction.

Cylinder Specifications

Bore size (mm)	50	63	80
Angle	30°, 45°, 60°, 75°, 90°, 105°, 120°, 135°		
Cushion	Unclamping side: Rubber bumper		
Maximum operating pressure	0.8 MPa (116 psi)		
Ambient and fluid temperature	-10 to 60°C (14 to 140°F)		
Minimum operating time	1.0 sec. to clamp, 1.0 sec. to unclamp		

Manual toggle release

The toggle link mechanism can be released easily by opening the metal cover and hitting the portion of the protrusion by using of plastic hammer (hammer made of soft material), etc.

2 Power clamp cylinder front mounting type

- Applicable model
CKZ2N50, 63, 80
- Applicable to front mounting type conforming to the new NAAMS.

Cylinder Specifications

Bore size (mm)	50	63	80
Angle	30°, 45°, 60°, 75°, 90°, 105°, 120°, 135°		
Cushion	Unclamping side: Rubber bumper		
Maximum operating pressure	0.8 MPa (116 psi)		
Ambient and fluid temperature	-10 to 60°C (14 to 140°F)		
Minimum operating time	1.0 sec. to clamp, 1.0 sec. to unclamp

3 Unclamped opening angle 15° kit (for change of angle)

- Applicable model
CKZ2N50, 63, 80
- In addition to the standard unclamped opening angle, 15° specification is available.
- Unclamped opening angle can be changed to 15° without disassembling the toggle construction.

Cylinder Specifications

Bore size (mm)	50	63	80
Angle	15°		
Cushion	Unclamping side: Rubber bumper		
Maximum operating pressure	0.8 MPa (116 psi)		
Ambient and fluid temperature	-10 to 60°C (14 to 140°F)		
Minimum operating time	1.0 sec. to clamp, 1.0 sec. to unclamp		

Series CKZ2N Specific Product Precautions

Be sure to read this before handling. Refer to pages 222 and 223 for Safety Instructions and "Precautions for Handling Pneumatic Devices" (M-03-E3A) for Actuator Precautions.

1. Manual toggle release

The toggle link mechanism can be released easily by hitting the portion of round shaped projection on the cover by using of plastic hammer (hammer made of soft material), etc.

Please be sure to perform manual toggle release after safety has been confirmed because the clamp arm can suddenly move up during manual release.

2. Do not disassemble the power clamp.

No special maintenance is necessary because the power clamp has a fully enclosed design to protect the clamp against welding spatter, and also the power clamp has a contamination resistant construction. So, please do not disassemble the power clamp except changing replaceable parts as there is a possibility of deterioration of the clamp performance.

3. Tightening torque of spare parts

Please make sure to tighten spare parts recommended in accordance with the following torque show in the table.

Description	Bore size (mm)	Tightening torque	
		N · m	lbf · in
Switch cassette kit	50	5.0 to 7.0	44 to 62
	63	5.0 to 7.0	44 to 62
	80	5.0 to 7.0	44 to 62
Switch actuator kit	50	3.0 to 4.0	27 to 35
	63	3.0 to 4.0	27 to 35
	80	3.0 to 4.0	27 to 35
Stopper bolt kit	50	130 to 150	1150 to 1327
	63	160 to 200	1416 to 1770
	80	480 to 520	4248 to 4600
Top cover kit	50	2.5 to 3.0	22 to 27
	63	2.5 to 3.0	22 to 27
	80	3.0 to 5.0	27 to 44

Note: (1) Please make sure that the switch cassette is tightly secured to the body when it has been replaced with a new one.

(2) Please make sure that the switch actuator is mounted so that the stamped side is secured as shown below if replacing.

4. Clamp Arm Tightening Torque

Bore size (mm)	Tightening torque	
	N · m	lbf · in
50	12 to 15	106 to 133
63	15 to 20	133 to 177
80	18 to 24	159 to 212
