

# Compact Cylinder with Solenoid Valve/ Guide Rod Type

*Labor, energy and space are saved by integrated structure.*

Solenoid valve

Compact cylinder/Guide rod type

## Labor saving

- No need to select size of valve
- Less piping work

## Energy saving

- Approx. 50% reduction in air consumption between cylinder and valve

## Space saving

- Small mounting space with valve integrated structure

Non-rotating accuracy  
 $\pm 0.1^\circ$  or less

Lateral load resisting **2 to 3** times  
\* Compared to the CDQ2 series

Load can be directly mounted.

Mounting pitch is interchangeable with the CQ2 series.

Series **CVQM**

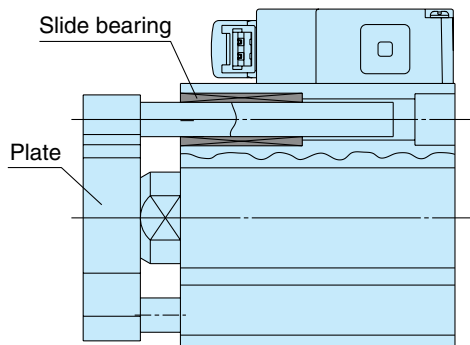

CAT.ES20-207A

## Series CVQM

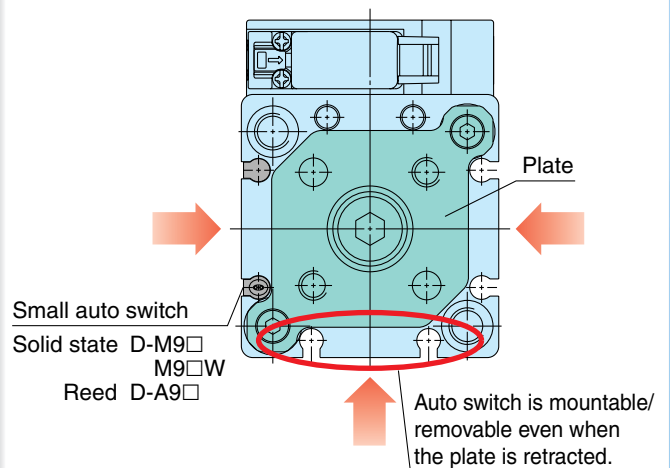

### Guide rod configuration with improved lateral load resistance and non-rotating accuracy

- Allowable lateral load of the plate is 2 to 3 times better than the CDQ2 series.
- Plate non-rotating accuracy  $\pm 0.1^\circ$

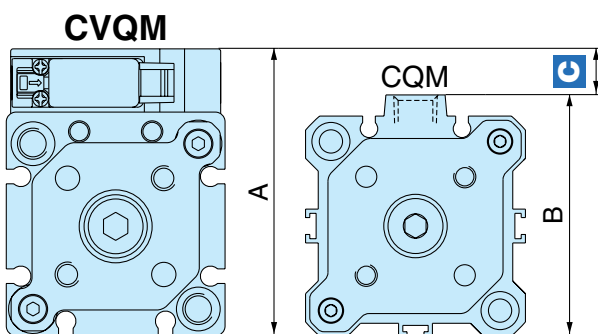

### Small 2-color indication solid state auto switch can be mounted.

- A round slot for mounting small auto switches is provided on 3 surfaces.

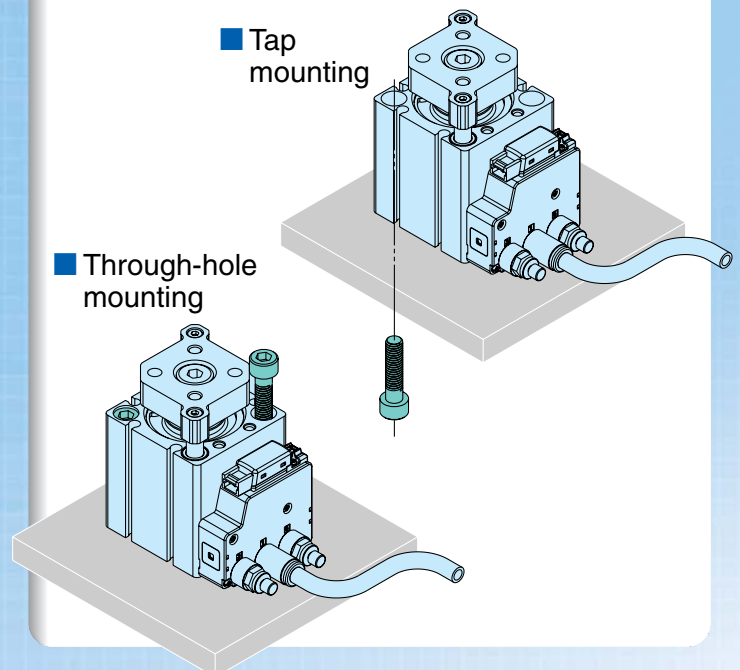

### Height comparison (Dimensional difference: C)

Bore size	A	B	C (mm)
32	59	49.5	9.5
40	67	57	10
50	83	71	12
63	97	84	13

### Mounting example

- Two ways of mounting are possible.
- Mounting pitch is interchangeable with the CQ2 series.

## Plate Allowable Lateral Load

Make sure to operate strictly within the allowable lateral load range to the plate.

Operation outside of this range may result in shorter service life or damage to the device.

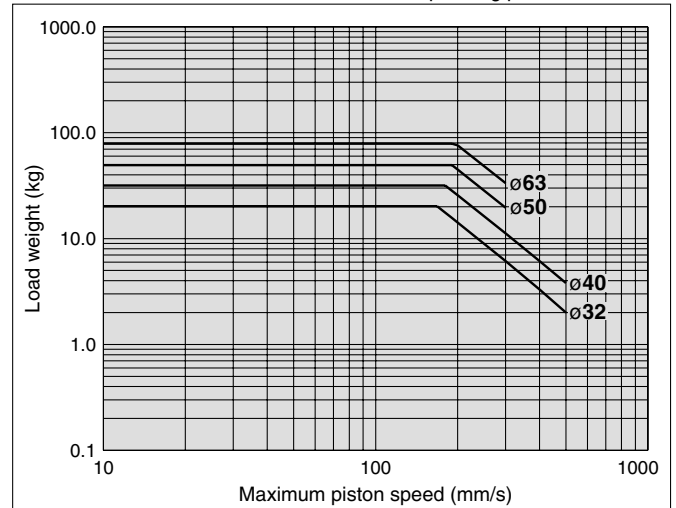

## Allowable Kinetic Energy

Make sure to operate strictly within the allowable range of the load weight and maximum speed.

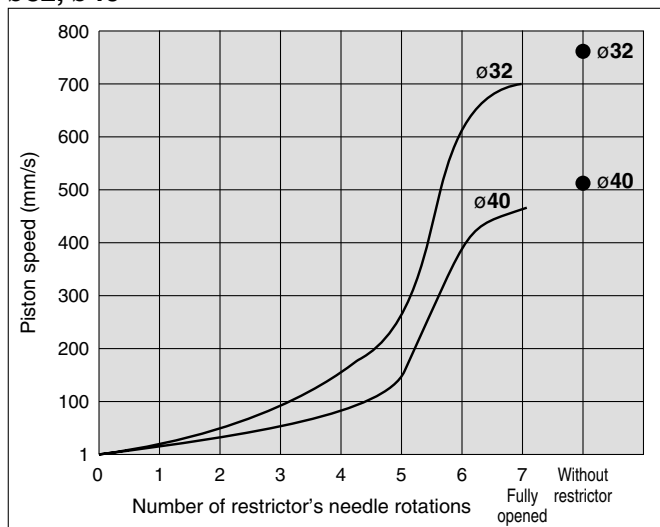

Operation outside of this range may cause excessive impact, which may result in the damage to the device.

Operating pressure: 0.5 MPa

## Auto Switches Common Specifications 2

### ⚠ Specific Product Precautions

Before handling auto switches, refer to "Handling Precautions for SMC Products" (M-E03-3) for Auto Switches Precautions.

### Auto Switch Hysteresis

Hysteresis is the distance between the position at which piston movement operates an auto switch and the position at which reverse movement turns the switch off. This hysteresis is included in part of the operating range (single side).

### Contact Protection Box: CD-P11, CD-P12

#### <Applicable switch models>

D-A9/A9□V

The auto switches above do not have a built-in contact protection circuit. A contact protection box is not required for solid state auto switches due to their construction.

- ① Where the operation load is an inductive load.
- ② Where the wiring length to load is greater than 5 m.
- ③ Where the load voltage is 100 VAC.

Therefore, use a contact protection box with the switch for any of the above cases:

The contact life may be shortened (due to permanent energizing conditions.)

#### Where the load voltage is 110 VAC.

When the load voltage is increased by more than 10% to the rating of applicable auto switches above, use a contact protection box (CD-P11) to reduce the upper limit of the load current by 10% so that it can be set within the range of the load current range, 110 VAC.

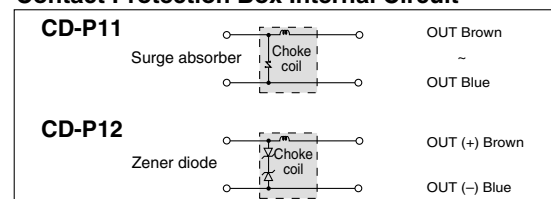

### Contact Protection Box Specifications

Part no.	CD-P11		CD-P12
Load voltage	100 VAC or less	200 VAC	24 VDC
Max. load current	25 mA	12.5 mA	50 mA

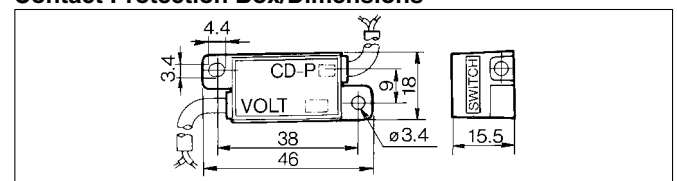

\* Lead wire length — Auto switch connection side 0.5 m  
Load connection side 0.5 m

### Contact Protection Box Internal Circuit

### Contact Protection Box/Dimensions

### Contact Protection Box Connection

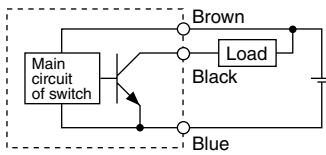

To connect a switch unit to a contact protection box, connect the lead wire from the side of the contact protection box marked SWITCH to the lead wire coming out of the switch unit. Keep the switch as close as possible to the contact protection box, with a lead wire length of no more than 1 meter.

Connect according to the applicable PLC input specifications, as the connection method will vary depending on the PLC input specifications.

#### 2-wire

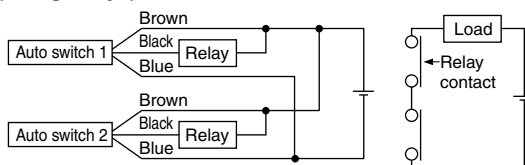

#### 2-wire

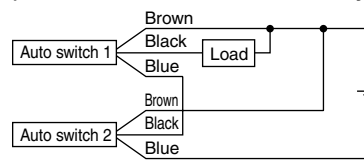

### Example of AND (Series) and OR (Parallel) Connection

#### • 3-wire

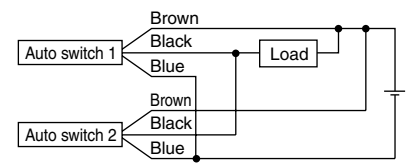

##### AND connection for NPN output (Using relays)

##### AND connection for NPN output (Performed with auto switches only)

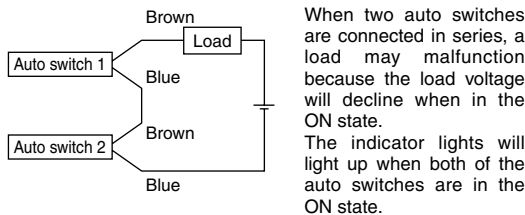

##### OR connection for NPN output

The indicator lights will light up when both auto switches are turned ON.

#### • 2-wire

##### 2-wire with 2-switch AND connection

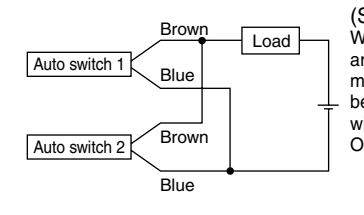

When two auto switches are connected in series, a load may malfunction because the load voltage will decline when in the ON state. The indicator lights will light up when both of the auto switches are in the ON state.

Load voltage at ON = Power supply voltage – Residual voltage x 2 pcs.  
= 24 V – 4 V x 2 pcs.  
= 16 V

Example: Power supply is 24 VDC

Internal voltage drop in auto switch is 4 V.

##### 2-wire with 2-switch OR connection

##### (Solid state)

When two auto switches are connected in parallel, malfunction may occur because the load voltage will increase when in the OFF state.

Load voltage at OFF = Leakage current x 2 pcs. x Load impedance  
= 1 mA x 2 pcs. x 3 kΩ  
= 6 V

Example: Load impedance is 3 kΩ.

Leakage current from auto switch is 1 mA.

##### (Reed)

Because there is no current leakage, the load voltage will not increase when turned OFF. However, depending on the number of auto switches in the ON state, the indicator lights may sometimes grow dim or not light up, due to the dispersion and reduction of the current flowing to the auto switches.

# Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of “**Caution**,” “**Warning**” or “**Danger**.” They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)\*1), and other safety regulations.

\*1) ISO 4414: Pneumatic fluid power – General rules relating to systems.

ISO 4413: Hydraulic fluid power – General rules relating to systems.

IEC 60204-1: Safety of machinery – Electrical equipment of machines. (Part 1: General requirements)

ISO 10218-1: Manipulating industrial robots - Safety.

etc.

**Caution:** **Caution** indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

**Warning:** **Warning** indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

**Danger:** **Danger** indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

## Warning

### 1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

### 2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

### 3. Do not service or attempt to remove product and machinery/equipment until safety is confirmed.

1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

### 4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.

1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
3. An application which could have negative effects on people, property, or animals requiring special safety analysis.
4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

## Caution

### 1. The product is provided for use in manufacturing industries.

The product herein described is basically provided for peaceful use in manufacturing industries.

If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary.

If anything is unclear, contact your nearest sales branch.

## Limited warranty and Disclaimer/Compliance Requirements

The product used is subject to the following “Limited warranty and Disclaimer” and “Compliance Requirements”. Read and accept them before using the product.

### Limited warranty and Disclaimer

#### 1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered.\*2)

Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.

#### 2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided.

This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.

#### 3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.

##### \*2) Vacuum pads are excluded from this 1 year warranty.

A vacuum pad is a consumable part, so it is warranted for a year after it is delivered.

Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

### Compliance Requirements

#### 1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.

#### 2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

# Specific Product Precautions

Be sure to read before handling.

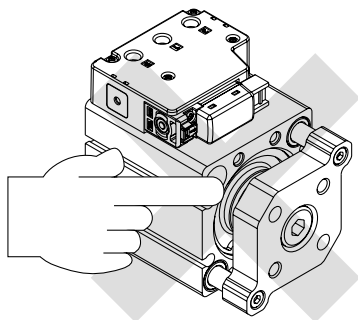

Refer to back pages 1 and 2 for Safety Instructions, "Handling Precautions for SMC Products" (M-E03-3) for Actuators and Auto Switches Precautions.

### Mounting

#### ⚠ Warning

1. Do not put hands or fingers between the plate and cylinder tubing.

Never put hands or fingers in the gap between the plate and cylinder tubing when the piston rods are retracted. Due to the heavy power output of the cylinder, failure to comply with this directive may result in trapping and subsequent injury to the human body.

#### ⚠ Caution

1. Do not scratch or dent the sliding parts of the piston rod and guide rods.

Damage to seals may cause air leakage or faulty operation.

2. Mounting of work piece

When screwing a bolt onto the threaded portion of the plate surface, be certain that the guide rods are fully extended to the end. Also, be careful that the tightening torque is not applied to the guide rods.

3. Make sure that the cylinder mounting surface has a flatness of 0.02 mm or less.

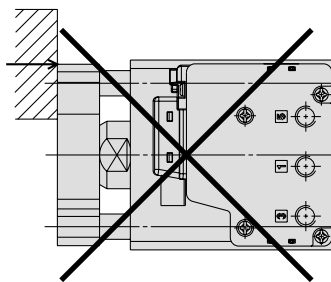

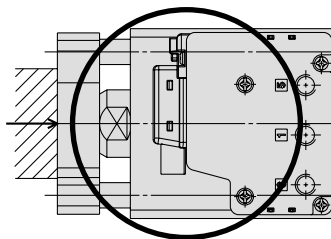

When mounting the cylinder body or work pieces on the plate, improper flatness of the mounting surface may cause malfunctions.

When the flatness of a work piece is not sufficient, attaching a shim such as a flat washer, etc., at the place of a mounting bolt between the work piece and the plate may reduce the affect on the operation.

### Others

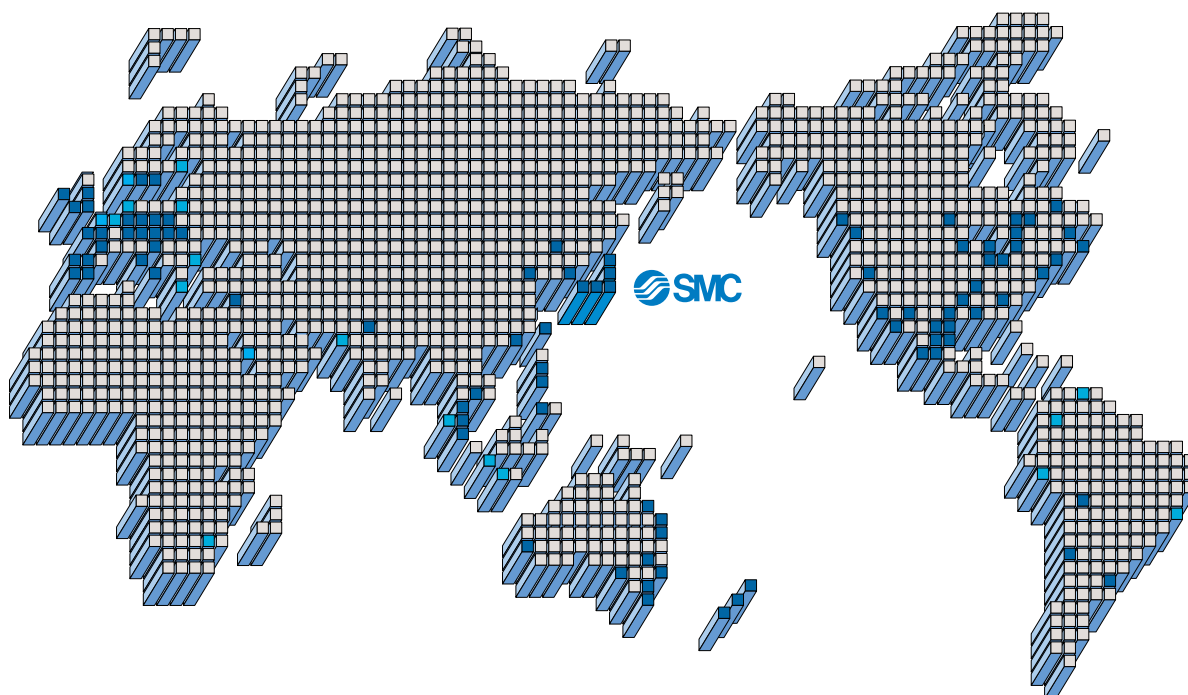

#### ⚠ Caution

1. Do not separate the cylinder from the valve.
2. This product should not be used as a stopper.
3. Do not disassemble and modify the product.
4. For example, in a pressing application, the cylinder thrust is directly applied to the plate, therefore, make sure that the pressing force is applied to the plate directly on the extended axial line of a rod. (Below figures)
