High Purity Chemical Valve

Series LVC/LVA/LVH

Integral Fittings/Threaded Ports/Manual Operation (Integral Fittings/Threaded Ports)

Clean Wet Series

Air Operated Type

Integral Fittings Series LVC P.461

- N.C./N.O. with same configuration/Double acting
- Compatible with 100°C fluid temperature

Body material: New PFA

Air Operated Type

Threaded Ports Series LVA P.471

- Diaphragm material PTFE, EPR, NBR are selectable

Body material: New PFA/ Stainless steel/ PPS

Manual Operation Series LVH P.481

Integral fitting type/Threaded type

- Locking and non-locking types available

Body material: New PFA/ Stainless steel/ PPS

Stable Sealing Surface
Guide ring

A unique guide ring on the piston rod eliminates lateral motion of the poppet, greatly increasing seal life and reducing particle formation with a stable work surface.

Low particle generation
Piston bumper

A bumper absorbs piston momentum to minimize impact-induced particles.

Prevents Micro-Bubbles
Diaphragm (PTFE)

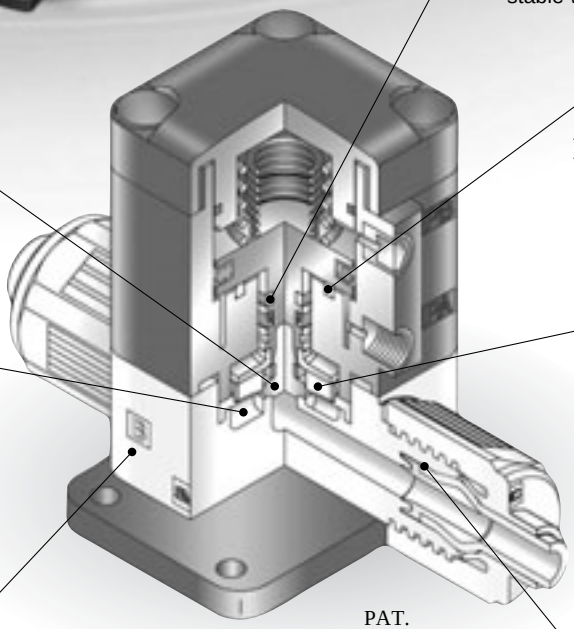
Special diaphragm construction ensures gentle opening and closing that prevents the formation of micro-bubbles.

Minimal dead space

In addition to a body designed for smooth flow with minimal internal dead space, integral fittings eliminate the possibility of residual liquid in pipe threads.

Outstanding corrosion resistance **Body (New PFA)**

Compatible with chemicals such as acids, bases and ultra DI water.

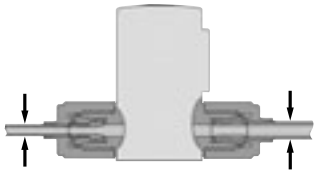


PAT.

Back-pressure resistance and long life **Buffer**

The diaphragm is supported by a buffer that minimizes deformation, which gives it long life and resistance to back-pressure.

Different tubing sizes can be selected **Hyper fitting**



- No leak design (quadruple seal)
- Nut lock mechanism (sealing)
- High flexural strength (tubing supports)

Main applications and fields

6	—	—	—	—	—	—	●	○	—	—	—	—	—	●	○

Note) Refer to page 489 for information on changing tubing sizes.

⚠ Specific Product Precautions

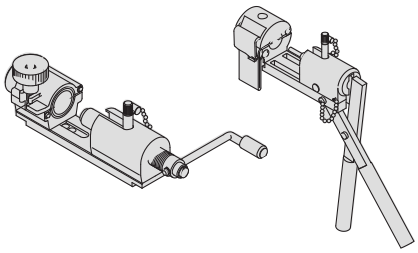
Be sure to read before handling. Refer to front matters 42 and 43 for Safety Instructions, and pages 491 and 492 for High Purity Chemical Valve Precautions.

Piping

⚠ Caution

1. Connect tubing with special tools.

Refer to the pamphlet "High-Purity Fluoropolymer Fittings HYPER FITTING®/Series LQ1, 2 Work Procedure Instructions" (M-E05-1) for connecting tubing and special tools. (Downloadable from our web site.)



⚠ Caution

2. Tighten the nut to the end surface of the body. As a guide, refer to the proper tightening torques shown below.

Tightening torque for piping

Body class	Torque (N·m)
2	1.5 to 2.0
3	3.0 to 3.5
4	7.5 to 9.0
5	11.0 to 13.0
6	5.5 to 6.0

Suck Back

A change of volume inside the suck back valve pulls in liquid at the end of the nozzle to prevent dripping.

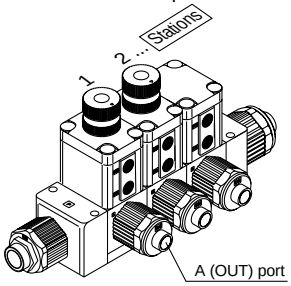
How to Order Manifold Assembly (Example)

Enter the part number of the valves to be mounted together with the manifold base part number.



Stations are counted from station 1 on the left side, with the A (OUT) ports in front.

<Example>

LLC2A-03-S11 ····· 1set **1 set Manifold base part no.**

∗ **LVC20A-S07-1 ····· 2 sets** **2 sets Valve part no. (stations 1 & 2)**

∗ **LVC20A-S07 ····· 1 set** **1 set Valve part no. (station 3)**

• Add the ∗ symbol at the beginning of part numbers for valves, etc. to be mounted.

Enter together in order counting from station 1 on the left side, with the A (OUT) ports in front.

Note 1) 0 to 60°C when the diaphragm is NBR or EPR.
Note 2) The N.O. type is not available for LVA10.
Note 3) Contact SMC if the valve will be used with vacuum and B → A flow.

⚠Specific Product Precautions

Be sure to read before handling. Refer to front matters 42 and 43 for Safety Instructions, and pages 491 and 492 for High Purity Chemical Valve Precautions.

Piping

⚠Caution

1. Avoid using metal fittings with a resin body (taper threads).

This can cause damage to the valve body.

Options

■ With flow rate adjustment

Adjusts the flow rate by controlling the diaphragm stroke.

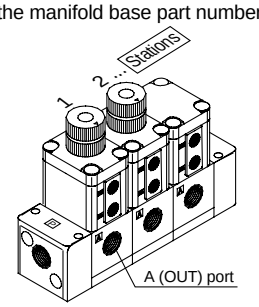
How to Order Manifold Assembly (Example)

Enter the part number of the valves to be mounted together with the manifold base part number.



Stations are counted from station 1 on the left side, with the A (OUT) ports in front.

<Example>

LLA2A-03-02-C ····· 1 set **1 set Manifold base part no.**

∗ **LVA20A-02-C1 ····· 2 sets** **2 sets Valve part no. (stations 1 & 2)**

∗ **LVA20A-02-C ····· 1 set** **1 set Valve part no. (station 3)**

• Add the ∗ symbol at the beginning of part numbers for valves, etc. to be mounted.

Enter together in order counting from station 1 on the left side, with the A (OUT) ports in front.

Note) Contact SMC if the valve is to be used with B → A flow.

⚠Specific Product Precautions

Be sure to read before handling. Refer to front matters 42 and 43 for Safety Instructions, and pages 491 and 492 for High Purity Chemical Valve Precautions.

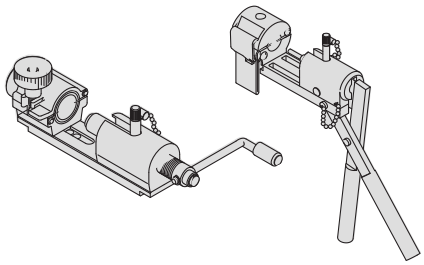
Piping

⚠Caution

Integral fitting type

1. Connect tubing with special tools.

Refer to the pamphlet "High-Purity Fluoropolymer Fittings HYPER FITTING®/Series LQ1, 2 Work Procedure Instructions" (M-E05-1) for connecting tubing and special tools. (Downloadable from our web site.)



2. Tighten the nut to the end surface of the body. As a guide, refer to the proper tightening torques shown below.

Tightening torque for piping

Body class	Torque (N·m)
2	1.5 to 2.0
3	3.0 to 3.5
4	7.5 to 9.0

Threaded type

1. Avoid using metal fittings with a resin body (taper threads).

This can cause damage to the valve body.

Different Diameter Tubing Applicable with Reducer

Different diameter tubing can be selected (within a body class) by using a nut and insert bushing (reducer).

● With reducer

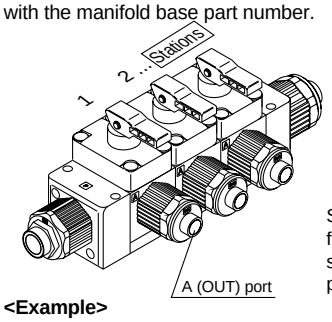
How to Order Manifold Assembly (Example)

Enter the part number of the valves to be mounted together with the manifold base part number.



Stations are counted from station 1 on the left side, with the A (OUT) ports in front.

<Example>

LLH2A-03-SH ····· 1 set **1 set Manifold base part no.**

∗ **LVH20A-S07 ····· 2 sets** **2 sets Valve part no. (stations 1 & 2)**

∗ **LVH20AL-S07 ····· 1 set** **1 set Valve part no. (station 3)**

• Add the ∗ symbol at the beginning of part numbers for valves, etc. to be mounted.

Enter together in order counting from station 1 on the left side, with the A (OUT) ports in front.

5	—	—	—	—	—	●	○	—	—	—	—	—	●	○	—
6	—	—	—	—	—	—	●	○	—	—	—	—	—	●	○

Part composition

	Component parts		
	Nut	Insert	Collar (insert assembly)
○ Basic size	Yes	Yes	No
● Reducer type	Yes	Yes	Yes

⚠ Caution

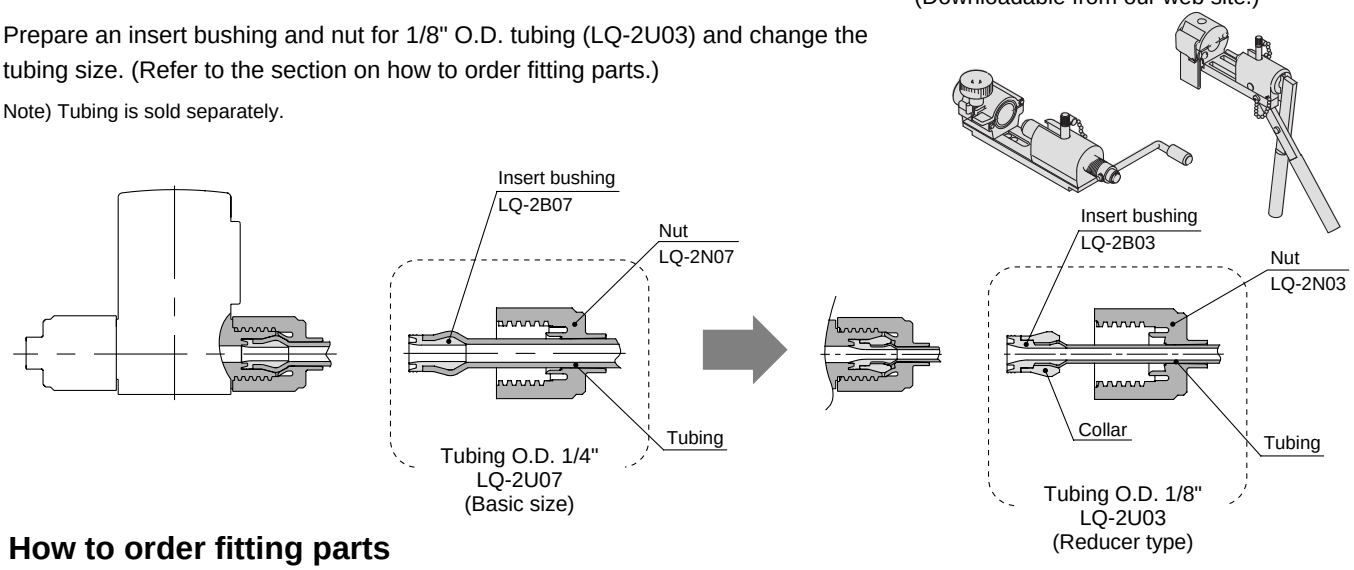
1. Connect tubing with special tools.
Refer to the pamphlet "High-Purity Fluoropolymer Fittings HYPER FITTING®/Series LQ1, 2 Work Procedure Instructions" (M-E05-1) for connecting tubing and special tools. (Downloadable from our web site.)

Changing the tubing size

Example) Changing the tubing from an O.D. 1/4" to O.D. 1/8" in body class 2.

Prepare an insert bushing and nut for 1/8" O.D. tubing (LQ-2U03) and change the tubing size. (Refer to the section on how to order fitting parts.)

Note) Tubing is sold separately.



How to order fitting parts

The material and fluid compatibility check list provides reference values as a guide only.
Note 1) Use a stainless steel body, as static electricity may be generated.
Note 2) Use caution as permeation may occur and any permeated fluid could effect other material parts.

Table symbols
○: Can be used
◯: Can be used in certain conditions
×: Cannot be used

- Compatibility is indicated for fluid temperatures of 100°C or less.
- The material and fluid compatibility check list provides reference values as a guide only, therefore we do not guarantee the application to our product.
- The data above is based on the information presented by the material manufacturers.
- SMC is not responsible for its accuracy and any damage happened because of this data.

Series LV
High Purity Chemical Valve Precautions 1

Be sure to read before handling.
Refer to front matters 42 and 43 for Safety Instructions.

Design & Selection

⚠Warning

1. Confirm the specifications.

Give careful consideration to operating conditions such as the application, fluid and environment, and use within the operating ranges specified in this catalog.

2. Fluids

Operate after confirming the compatibility of the product's component materials with fluids, using the check list on features page 490. Contact SMC regarding fluids other than those in the check list.

Operate within the indicated fluid temperature range.

3. Maintenance space

Ensure the necessary space for maintenance and inspections.

4. Fluid pressure range

Keep the supplied fluid pressure within the operating pressure range shown in the catalog.

5. Ambient environment

Operate within the ambient operating temperature range. After confirming the compatibility of the product's component materials with the ambient environment, operate so that fluid does not adhere to the product's exterior surfaces.

6. Liquid seals

When circulating fluid

Provide a relief valve in the system so that fluid does not get into the liquid seal circuit.

7. Countermeasures for static electricity

Since static electricity may be generated depending on the fluid being used, implement suitable countermeasures.

Mounting

⚠Warning

1. If air leakage increases or equipment does not operate properly, stop operation.

After mounting, perform suitable function and leak tests to confirm that the mounting is correct.

2. Instruction manual

Mount and operate the product after reading the manual carefully and understanding its contents. Also keep the manual where it can be referred to as necessary.

Piping

⚠Caution

1. Preparation before piping

Before piping is connected, it should be thoroughly blown out with air (flushing) or washed to remove chips, cutting oil and other debris from inside the pipe.

Install piping so that it does not apply pulling, pressing, bending or other forces on the valve body.

2. Use the tightening torques shown below when making connections to the pilot port.

Operating port tightening torque

Operating port	Torque (N·m)
M5	1/6 turn with a tightening tool after first tightening by hand
Rc, NPT 1/8	0.8 to 1.0

3. Use of metal fittings

Do not use metal fittings for piping on taper threads made of resin, as this may cause damage to the threads.

LVA PPS body ported tightening torque for fittings.

Size	Breaking torque (N·m)	Tightening torque (N·m)	Guideline for tightening torque (Number of turns)
LVA20	2 to 3	0.5 to 1	2 to 3 turns
LVA30	6 to 8	2 to 3	3 to 4 turns
LVA40	11 to 14	5 to 7	3 to 4 turns
LVA50	18 to 20	8 to 10	3 to 4 turns

∗ Guideline for tightening torque
Number of turns when the fitting is screwed into the body with 2 to 3 windings of sealant tape applied to threaded portion of the piping.
The value may differ for types other than sealant type.

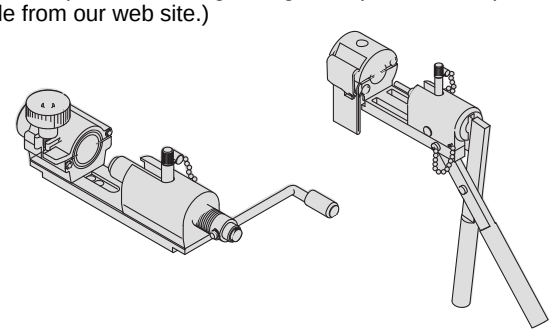
4. Use pilot ports and sensor (breathing) ports as indicated below.

	PA Port	PB Port	Sensor (breathing) port
N.C.	Pressure	Breathing	Breathing
N.O.	Breathing	Pressure	Breathing
Double acting	Pressure	Pressure	Breathing

In the case of N.C. and N.O. types, the port which does not receive operating pressure is released to atmosphere. When intake and exhaust directly from the valve is not desired due to problems with the ambient environment or scattering of dust, etc., install piping and perform intake and exhaust at a location which does not present a problem.

5. Connect tubing with special tools.

Refer to the pamphlet “High-Purity Fluoropolymer Fittings HYPER FITTING®/Series LQ1, 2 Work Procedure Instructions” (M-E05-1) for connecting tubing and special tools. (Downloadable from our web site.)



Series LV
High Purity Chemical Valve Precautions 2

Be sure to read before handling.
Refer to front matters 42 and 43 for Safety Instructions.

Operating Air Supply

⚠Warning

1. Use clean air.

Do not use compressed air which includes chemicals, synthetic oils containing organic solvents, salt, or corrosive gases, etc., as this may cause damage or malfunction.

Operating Environment

⚠Warning

1. Do not use in a location having an explosive atmosphere.

2. Do not operate in locations where vibration or impact occurs.

3. Do not use in locations where radiated heat will be received from nearby heat sources.

Maintenance

⚠Warning

1. Maintenance should be performed in accordance with the procedures in the instruction manual.

Incorrect handling can cause damage or malfunction of machinery and equipment, etc.

2. Before removing equipment or compressed air supply/exhaust devices, shut off the air and power supplies, and exhaust compressed air from the system.

Further, when restarting equipment after remounting or replacement, first confirm safety and then check the equipment for normal operation.

3. Perform work after removing residual chemicals and carefully replacing them with DI water or air, etc.

4. Do not disassemble the product. Products which have been disassembled cannot be guaranteed.

If disassembly is necessary, contact SMC.

5. In order to obtain optimum performance from valves, perform periodic inspections to confirm that there are no leaks from valves or fittings, etc.

⚠Caution

1. Removal of drainage

Flush drainage from filters regularly.

Precautions on Usage

⚠Warning

1. Operate within the ranges of the maximum operating pressure and back pressure.

⚠Caution

1. When the diaphragm is made of PTFE

Please note that when the product is shipped from the factory, gases such as N_2 and air may leak from the valve at a rate of $1cm^3$/min (when pressurized).

2. When operated at a very low flow rate, the series LV□ with flow rate adjustment may vibrate, etc. depending on the operating conditions. Therefore, operate it after careful examination of the flow rate, pressure and piping conditions.

3. In the series LV□, water hammering may occur depending on the fluid pressure conditions. In most cases, improvement is possible by adjusting the pilot pressure with a speed controller, etc., but the flow rate, pressure and piping conditions should be reviewed.

4. To adjust the flow rate for the series LV□ with flow rate adjustment, open gradually starting from the fully closed condition.

Opening is accomplished by turning the adjustment knob counter clockwise. Additionally, do not apply any unreasonable force to the adjustment knob when nearing a fully opened or closed state. This may result in deformation of the orifice sheet surface or damage to the threaded part of the adjustment knob. It is in the fully closed condition when the product is shipped from the factory.

5. After a long period of nonuse, perform a test run before beginning regular operation.

6. Since the LVC is packaged in a clean room use sufficient care in handling when opened.

7. Take extra care when setting the operating direction and when handling the lever of series LVH.
