WHO WE ARE.

ABOVE ALL R+W IS: THE PERFECT COUPLING.

When R+W Antriebselemente GmbH was first established in 1990 in Klingenberg, Germany, there were three people on board. The head office is still there, but we are now more than 170 people, with subsidiaries in the USA, China, Italy, Singapore, France and Slovakia, and are partnered with over 60 well established distributors in more than 40 countries throughout the world. Many developments have lead to this success, but most importantly it was brought about by our endless search for the best possible coupling solutions as well as the high esteem in which we hold all of our customers.

WE PROVIDE INSPIRED SOLUTIONS BACKED BY SOUND PLANNING AND DESIGN.

R+W stands for expertise in the development of solutions for precise torque transmission. The focus of our development is on innovative coupling systems for all sectors of precision drive technology. As a leading manufacturer of precision couplings and line shafts, we strive to maintain a permanent status of technology leadership in our field. Our central claim: R+W couplings ensure precision for process reliability and efficiency, and to that end we seek perfection.

Optimized for technology and business, our product portfolio includes:

- ▶ **Bellows couplings**
- ▶ **Elastomer insert couplings**
- ▶ **Ball-detent safety couplings**
- ▶ **Line shaft couplings**
- ▶ **High torque industrial couplings**
- ▶ **Development of customized solutions with collaboration from start to finish, including:**
 - Consultation
 - Conception
 - Engineering analysis
 - Prototyping
 - Manufacturing

DRIVE

D - DYNAMIC

Our staff is trained to always be ready and willing to provide a quick reaction to customer inquiries. Our product, the core of which is based on handling high performance, dynamic applications, is increasingly available for fast delivery.

R - RELIABLE

Many of our products are designed for infinite life with zero maintenance required. With thorough engineering processes in place, and an ISO 9001:2008 certified production facility, we continue to deliver high quality coupling products with a high level of reliability.

I - INNOVATIVE

Our business was founded on developing unique and innovative solutions to common coupling problems. Our staff in turn is constantly developing its work flows to streamline delivery and simplify the process for our customers.

V - VERSATILE

With products successfully applied and deployed in over 125 industry segments, chances are very good that we have an expert on our versatile staff that is familiar with your application requirements.

E - EXPANDING

With double digit annual growth the norm, our company is ever expanding, adding new product offerings and opening new service centers throughout the world all the time.

OTHER R+W COUPLINGS

Aside from the products detailed in this catalog, we also offer quality shaft couplings and torque limiters for high powered industrial drives.

More information on these can be found in our **industrial couplings catalog**.

APPLICATIONS AND DESIGN FEATURES PRECISION COUPLINGS

SIZING AND SELECTION

P. 9

INSTALLATION AND HANDLING

P. 21

TORSIONALLY STIFF BELLows COUPLINGS

P. 29

SIZES FROM 2 – 10,000 Nm

AREAS OF APPLICATION

for highly dynamic motion in:

- Machine tools
- Test stands
- Packaging machinery
- Printing machinery
- Paper converting machinery
- Labeling machinery
- Textile machinery
- Sorting machinery
- Automation equipment

FEATURES

- torsionally stiff
- low moment of inertia
- zero backlash
- highly concentric
- naturally very well balanced
- precise transmission
- infinite life
- wear and maintenance free
- easy to install

TORSIONALLY STIFF MINIATURE BELLows COUPLINGS

P. 49

SIZES FROM 0.05 – 10 Nm

AREAS OF APPLICATION

for precise transmission of angular motion and torque in:

- Linear actuators
- Semiconductor machinery
- Medical devices
- Lab automation systems
- Micro pumps
- Test and measurement systems

FEATURES

- zero backlash
- torsionally stiff
- precise transmission
- infinite life
- easy to install

P. 63

BACKLASH FREE SERVOMAX® ELASTOMER COUPLINGS

SIZES FROM 0.5 – 25,000 Nm

AREAS OF APPLICATION

for vibration damping torque transmission in:

- Packaging machinery
- Pump drives
- Machine tools
- Lift systems
- Conveyors
- Labeling machinery
- Food processing machinery

FEATURES

- vibration damping
- electrically isolating
- backlash free
- calibrated preloaded insert
- concentrically machined hubs

P. 81

BACKLASH FREE SAFETY COUPLINGS

SIZES FROM 0.1 – 2,800 Nm

AREAS OF APPLICATION

for overload protection in:

- Machine tools
- Packaging machinery
- Conveyors and feeders
- Metal forming equipment
- Test stands
- Pump drives
- Assembly systems
- Converting equipment
- Wherever rotation and overload exist

FEATURES

- protects from rotating inertia as well as motor torque
- precise torque overload protection
- patented preload for zero backlash
- compact simple design
- low moment of inertia
- extremely fast disengagement
- low residual friction after disengagement

APPLICATIONS AND DESIGN FEATURES

PRECISION COUPLINGS

BACKLASH FREE AND SMOOTH RUNNING LINE SHAFTS

ZA EZ

P. 113

SIZES FROM 10 – 25,000 Nm

AREAS OF APPLICATION

for spanning large distances between shaft ends in:

- Material handling systems
- Printing machinery
- Labeling machinery
- Textile machinery
- Packaging machinery
- Converting equipment
- Lift systems
- Theatre automation
- Gantry systems
- Screw jack systems

FEATURES

- installation and removal without disturbing adjacent equipment
- self-supporting up to 6 meters
- no intermediate support bearing required

HIGH STRENGTH DISC PACK COUPLINGS

LP

P. 125

SIZES FROM 350 – 20,000 Nm

AREAS OF APPLICATION

- API 610 pump packages
- Paper machinery
- Steel mill equipment
- Test stands
- Generators
- Bulk material handling systems
- Centrifuges
- Cooling tower drives
- Compressors
- Printing machinery

FEATURES

- maintenance free for infinite life
- frictional clamping of disc packs
- high speeds with extended DBSE
- zero backlash
- high torsional stiffness
- robust compact design
- precise transmission of angular motion and torque
- high operational dependability
- low restoring forces from misalignment
- compensation for lateral, axial and angular shaft misalignment

ATEX

P. 133

FOR USE IN HAZARDOUS ENVIRONMENTS – ATEX**AREAS OF APPLICATION**

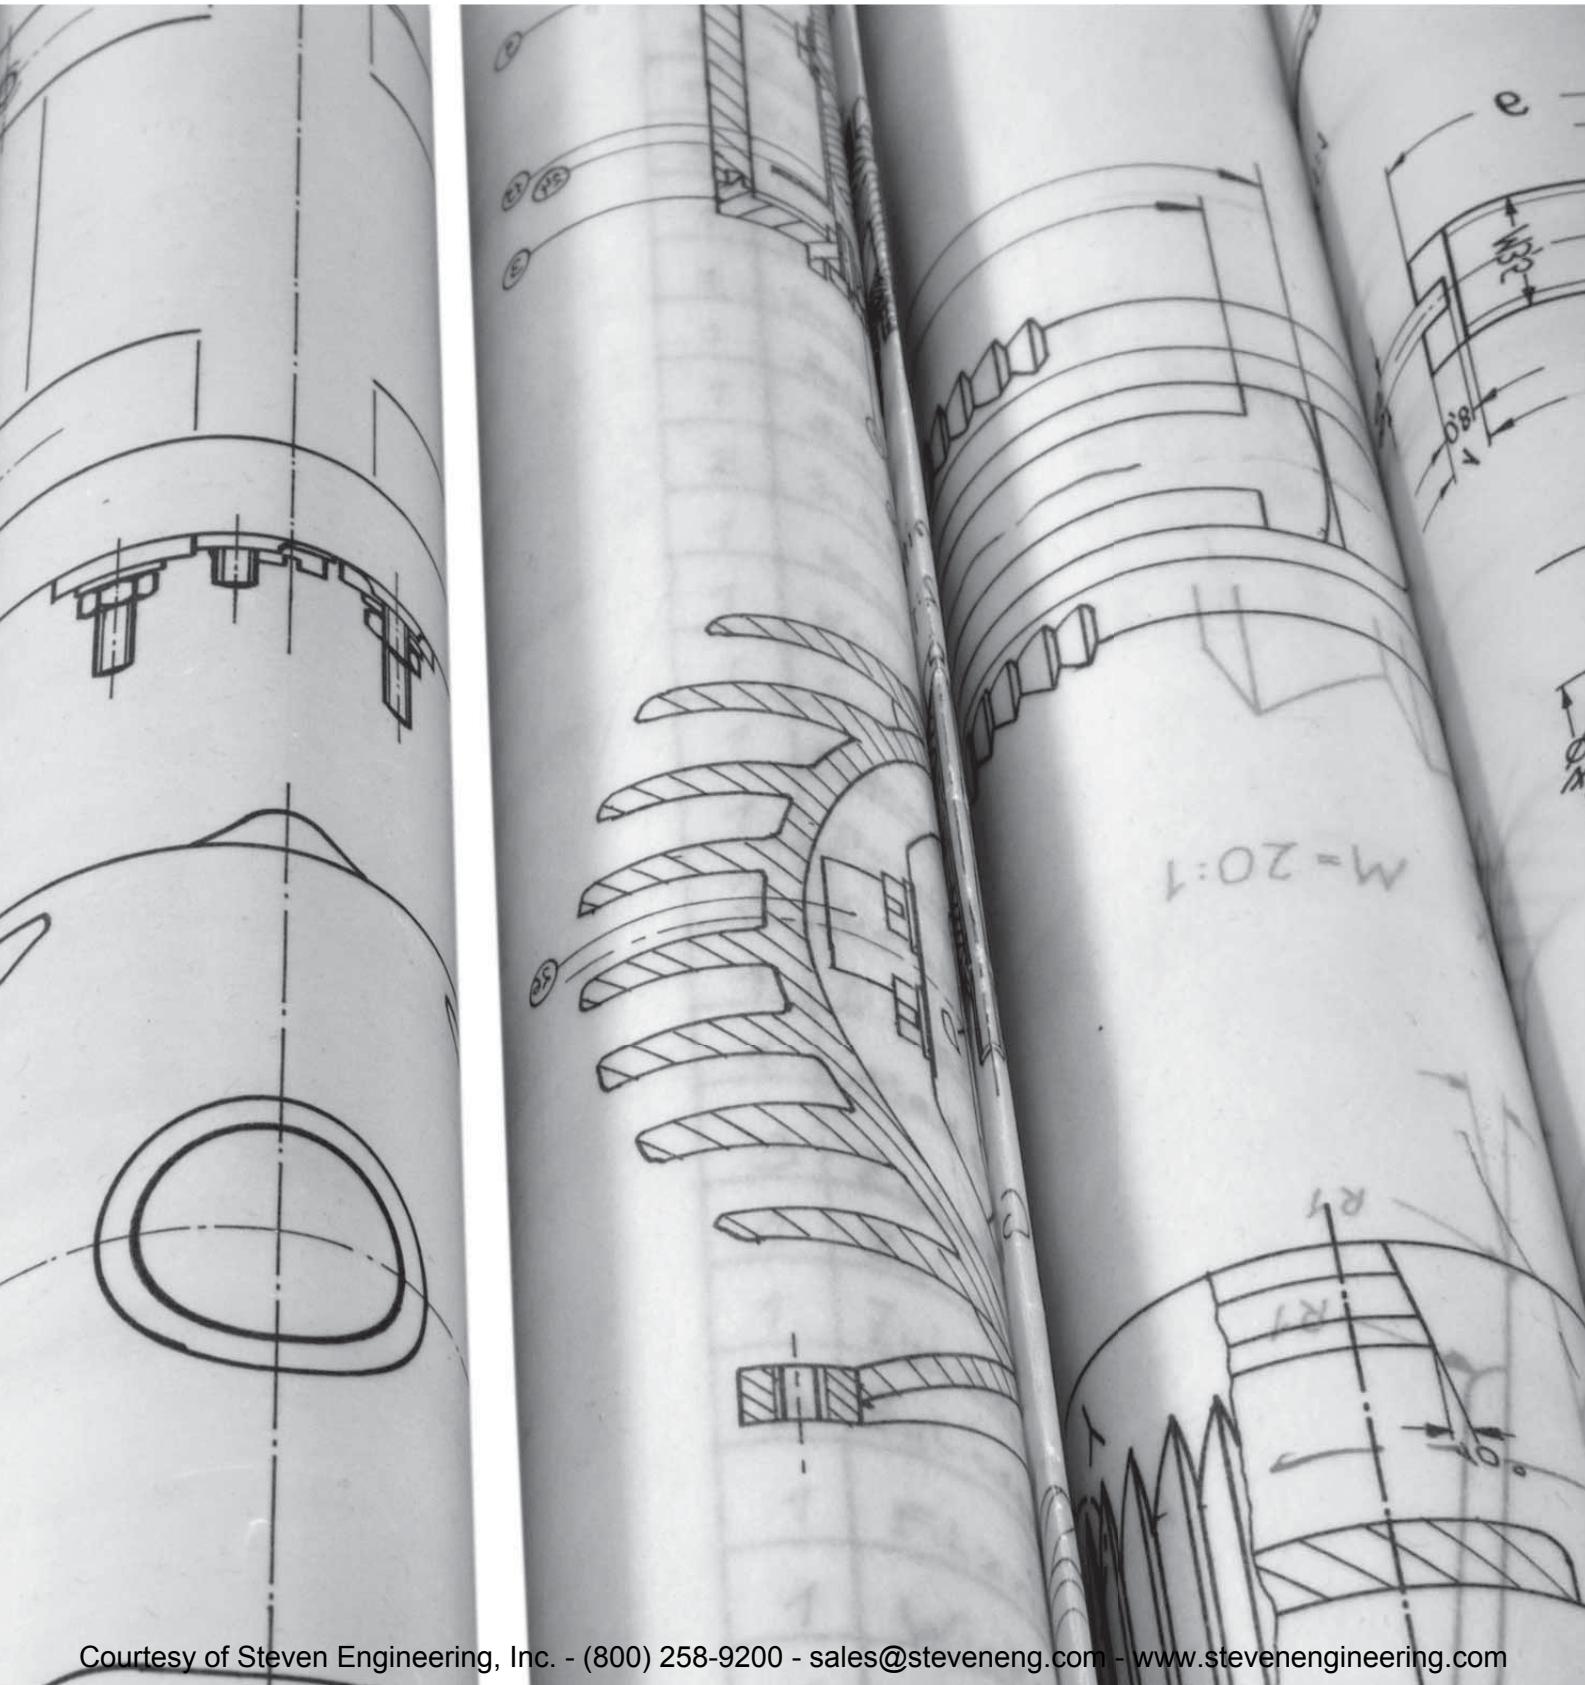

for safer operation in industries with explosive atmospheres, such as:

- ▶ Oil & gas extraction
- ▶ Petrochemical processing
- ▶ Munitions manufacturing
- ▶ Bulk and powder processing
- ▶ Paint systems

FEATURES

For hazard zones 1/21 and 2/22 these couplings are authorized under directive 94/9/EG.

- ▶ Bellows couplings
- ▶ Elastomer couplings
- ▶ Safety couplings
- ▶ Line shafts
- ▶ Disc pack couplings

SIZING AND SELECTION

According to
DIN 740 part 2

SIZING AND SELECTION

BELLOWS COUPLINGS

BK MK

SYMBOLS

- T_{KN} = Rated torque of the coupling (Nm)
 T_{AS} = Peak torque of the drive system
e.g. max. acceleration torque of drive (Nm)
or max. braking torque of load (Nm)
 J_L = Total load inertia
(e.g. spindle + slide + workpiece + 1/2 of coupling) (kgm^2)
 J_A = Total driving inertia
(motor [including gear ratio] + 1/2 of coupling) (kgm^2)
 C_T = Torsional stiffness of the coupling (Nm/rad)
 f_e = Natural frequency of the two mass system (Hz)
 f_{er} = Excitation frequency of the drive (Hz)
 φ = Torsional deflection (degree)

Shock or Load Factor S_A		
uniform load	non-uniform load	highly dynamic load
1	2	3-4
Common factor for servo drives in machine tools: $S_A = 2-3$		

ACCORDING TO TORQUE

Couplings are normally sized for the highest torque to be regularly transmitted. The peak torque of the application should not exceed the rated torque of the coupling. The following calculation provides an approximation of the minimum required coupling size, and allows for the maximum rated speed and misalignment to exist in the application:

$$T_{KN} \geq 1.5 \cdot T_{AS} \text{ (Nm)}$$

ACCORDING TO ACCELERATION TORQUE

A more detailed calculation takes acceleration and the driving and driven moments of inertia into account. A strong inertia ratio diminishes the effect of the load factor in the sizing calculation.

$$T_{KN} \geq T_{AS} \cdot S_A \cdot \frac{J_L}{J_A + J_L} \text{ (Nm)}$$

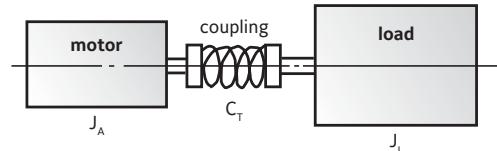

ACCORDING TO RESONANT FREQUENCY

The torsional natural frequency of the coupling must be significantly higher or lower than that of the equipment. For the mechanical substitution model the two mass system applies.

In practice the following applies: $f_e \geq 2 \cdot f_{er}$

$$f_e = \frac{1}{2 \cdot \pi} \sqrt{C_T \cdot \frac{J_A + J_L}{J_A \cdot J_L}} \text{ (Hz)}$$

Two Mass System

ACCORDING TO TORSIONAL DEFLECTION

To calculate transmission error as a result of torsional stress:

$$\varphi = \frac{180}{\pi} \cdot \frac{T_{AS}}{C_T} \text{ (degree)}$$

Z_h			contact us
S_z	1.0	1.3	

Shock or Load Factor S_A	uniform load	non-uniform load	highly dynamic load
	1	1.8	2.5

COUPLING SELECTION FOR OPERATION WITHOUT SHOCK OR REVERSAL

The rated torque of coupling (T_{KN}) must be greater than the rated torque of the load (T_{LN}), taking into account the temperature at the coupling (Temperature factor S_v). Should T_{LN} be unknown, T_{AN} can be used as a substitute in the formula.

Calculation

$$T_{KN} > T_{AN} \cdot S_v$$

Supplemental Calculation

$$T_{AN} = \frac{9,550 \cdot P}{n}$$

Sample calculation: (without shock loads)

Coupling conditions

$v = 70^\circ\text{C}$

$S_v = 1.7$ (or $70^\circ/\text{Elastomer Type A}$)

Drive for centrifugal pump

$T_{AN} = 85 \text{ Nm}$

Calculation: $T_{KN} > T_{AN} \cdot S_v$

$$T_{KN} > 85 \text{ Nm} \cdot 1,7$$

$T_{KN} > 144.5 \text{ Nm}$ \longrightarrow **Result:** Coupling model EK2/150/A ($T_{KN} = 160 \text{ Nm}$) is selected.

COUPLING SELECTION FOR OPERATION WITH SHOCK LOADS

Same basic conditions as above. In addition, the maximum torque rating of the coupling (T_{Kmax}) is dictated by peak torque (T_s) due to shock loads.

Calculation

$$T_{KN} > T_{AN} \cdot S_v$$

Supplemental Calculation

$$T_{AN} = \frac{9,550 \cdot P_{LN}}{n}$$

Calculation

$$T_{Kmax} > T_s \cdot S_z \cdot S_v$$

Supplemental Calculation

$$T_s = \frac{T_{AS} \cdot S_A}{m + 1}$$

$$m = \frac{J_A \cdot J_1}{J_L \cdot J_2}$$

SIZING AND SELECTION

SAFETY COUPLINGS

SK SL ES

SYMBOLS

T_{KN}	= Rated torque of the coupling (Nm)
T_{AN}	= Load torque (Nm)
T_{AS}	= Peak torque of the motor (Nm)
J_L	= Moment of inertia of the load (kgm^2)
J_A	= Moment of inertia of the drive (kgm^2)
P_{AN}	= Drive power (kW)
α	= Angular acceleration $\frac{1}{\text{s}^2}$
t	= Acceleration / deceleration time (s)
ω	= Angular velocity (1/s)
n	= Drive speed (min^{-1})
s	= Screw lead (mm)
F_v	= Feed force (N)
η	= Spindle efficiency
d_0	= pinion dia. (pulley) (mm)
C_T	= Torsional stiffness of the coupling (Nm/rad)
$J_{\text{Masch.}}$	= Total load inertia (e.g. spindle + slide + workpiece + 1/2 of coupling) (kgm^2)
$J_{\text{Mot.}}$	= Total driving inertia (motor [including gear ratio] + 1/2 of coupling) (kgm^2)
f_e	= Natural frequency of the two mass system (Hz)
φ	= Torsional deflection (degree)

Shock or Load Factor S_A		
uniform load	non-uniform load	highly dynamic load
1	2	3
Common factor for servo drives in machine tools: $S_A = 2-3$		

ACCORDING TO DISENGAGEMENT TORQUE

Torque limiters are generally selected according to the required disengagement torque, which must be greater than the torque required for regular operation. The disengagement of the torque limiter is most commonly determined in accordance with the drive data. For this purpose, the following calculation applies:

$$T_{KN} \geq 1.5 \cdot T_{AS} \text{ (Nm)}$$

or

$$T_{KN} \geq 9,550 \cdot \frac{P_{AN}}{n} \cdot 1.5 \text{ (Nm)}$$

ACCORDING TO ACCELERATION (START-UP WITH NO LOAD)

$$T_{KN} \geq \alpha \cdot J_L \geq \frac{J_L}{J_A + J_L} \cdot T_{AS} \cdot S_A \text{ (Nm)}$$

$$\alpha = \frac{\omega}{n} = \frac{\pi \cdot n}{t \cdot 30}$$

ACCORDING TO ACCELERATION WITH LOAD (START-UP UNDER LOAD)

$$T_{KN} \geq \alpha \cdot J_L + T_{AN} \geq \left[\frac{J_L}{J_A + J_L} \cdot (T_{AS} - T_{AN}) + T_{AN} \right] \cdot S_A \text{ (Nm)}$$

ACCORDING TO LINEAR FEED FORCE

Spindle Drive (ball screw / lead screw)

$$T_{AN} = \frac{s \cdot F_v}{2,000 \cdot \pi \cdot \eta} \text{ (Nm)}$$

Belt Drive / Chain Drive

$$T_{AN} = \frac{d_0 \cdot F_v}{2,000} \text{ (Nm)}$$

ACCORDING TO RESONANT FREQUENCY (SK2 / SK3 / SK5 WITH METAL BELLOWS - ES2 / ESL WITH ELASTOMER RING)

The torsional natural frequency of the coupling must be significantly higher or lower than that of the equipment. For the mechanical substitution model the two mass system applies:

$$f_e = \frac{1}{2 \cdot \pi} \sqrt{C_T \times \frac{J_{Masch} + J_{Mot}}{J_{Masch} \cdot J_{Mot}}} \text{ (Hz)}$$

ACCORDING TO TORSIONAL DEFLECTION (SK2 / SK3 / SK5 WITH METAL BELLOWS - ES2 / ESL WITH ELASTOMER RING)

To calculate transmission error as a result of torsional stress:

$$\varphi = \frac{180}{\pi} \cdot \frac{T_{AN}}{C_T} \text{ (degree)}$$

ACCORDING TO LOAD HOLDING FUNCTION SYSTEM

► Load Holding Version

The SK1, SKP, and SKN models in the load holding version can secure a minimum of 2x their torque setting after disengagement. The SK2, SK3, and SK5 models can secure

only up to the torque rating of the flexible bellows after disengagement.

R+W CALCULATION PROGRAM

Using proprietary software, R+W will calculate the specific mechanical details of exactly the model you plan to use. Overall length, tube materials (e.g. steel, aluminum, CFK), and other factors are used to determine a number of performance values unique to your line shaft coupling.

Critical speed	n_k = 1/min.
Torsional stiffness of tubing	C_T^{ZWR} = Nm/rad
Overall stiffness	C_T^{ZA} = Nm/rad
Torsional deflection	φ = degree-min-sec
Total Weight	m = kg
Moment of inertia	J = kgm^2
Maximum misalignment	ΔKr = mm

Common factor for servo drives in machine tools: $S_A = 2-3$

ACCORDING TO TORQUE

Couplings are normally sized for the highest torque to be regularly transmitted. The peak torque of the application should not exceed the rated torque of the coupling. The following calculation provides an approximation of the minimum required coupling size, and allows for the maximum rated speed and misalignment to exist in the application.

$$T_{KN} \geq 1.5 \cdot T_{AS} \text{ (Nm)}$$

ACCORDING TO ACCELERATION TORQUE

A more detailed calculation takes acceleration and the driving and driven moments of inertia into account. A strong inertia ratio diminishes the effect of the load factor in the sizing calculation.

$$T_{KN} \geq T_{AS} \cdot S_A \cdot \frac{J_L}{J_A + J_L} \text{ (Nm)}$$

INSTALLATION AND HANDLING

SHAFT / AXIS MISALIGNMENT

Exact alignment of the shaft axes extends the service life of the coupling and adjacent components by minimizing reaction loads from misalignment.

FIT CLEARANCE

Overall shaft / hub clearance of 0.01 - 0.05 mm

INSTALLATION AND HANDLING PRECISION COUPLINGS

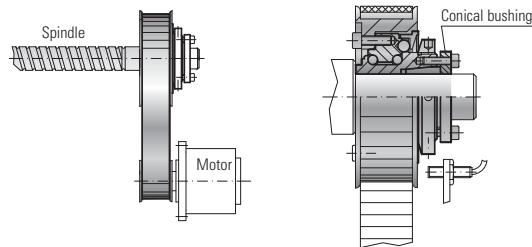

The installation and operating instructions are an integral part of the R+W coupling. Please read carefully and follow all instructions. Failure to comply with these procedures could result in poor performance and / or failure of the coupling. Installation should be performed by a qualified technician. This manual will be included with the delivery of the coupling.

INDIRECT DRIVES

SAFETY COUPLINGS / TORQUE LIMITERS

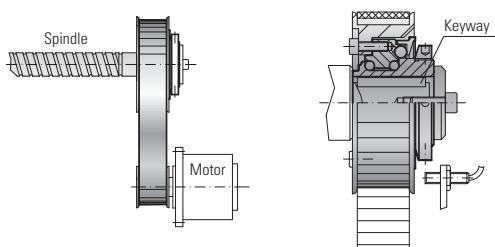

Drive components (e.g. timing belt sprockets) must be centered on the output flange prior to mounting. Please also refer to the maximum overhung load ratings and locations provided on page 89. If the overhung load is beyond the capacity of the coupling bearings, an additional bearing can be mounted on the shaft to support the overhung load.

ELASTOMER COUPLINGS

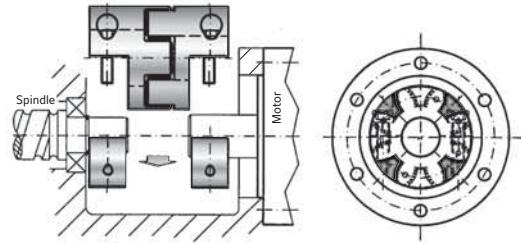

The equalizing element of EK couplings is the elastomer insert. It transmits torque without backlash or vibration. The elastomer insert defines the characteristics of the entire drive system. The coupling is backlash free due to a pretensioning of the elastomer insert between the two coupling halves. SERVOMAX couplings compensate for lateral, angular, and axial misalignment.

DIRECT DRIVES

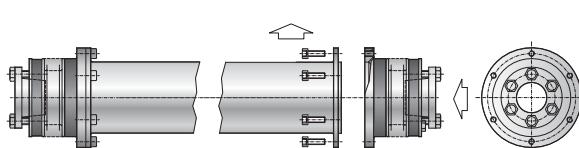

LINE SHAFTS

R+W line shafts are flexible shaft couplings for spanning longer distances between shaft ends. The compensation elements (bellows or elastomer) compensate for lateral, axial, and angular shaft misalignment. Torque transmission is backlash free with high torsional stiffness (bellows) or vibration damping (elastomer). In the case of bellows couplings, the tube is carried over a special support system which transfers the weight back to the hubs. Below are the various hub / shaft connections available.

VERTICAL INSTALLATION

ZA

ZAE

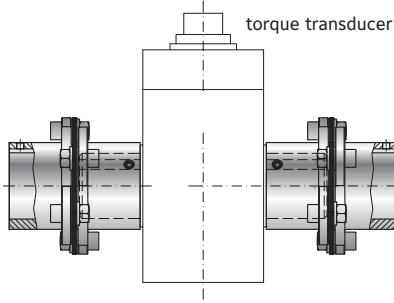

- In vertical installations a special support transfers the weight to the bottom hub.
- This support system is available for all sizes.
- Please note, "for vertical installation" when ordering.

Schematic of support system

DISC PACK COUPLINGS

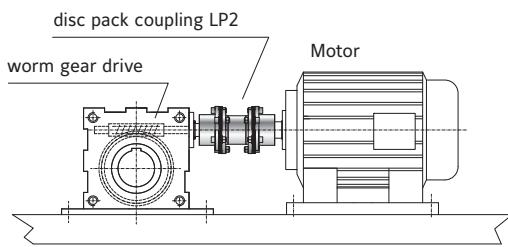

R+W LP disc pack couplings are supplied as individual components. The disc packs absorb axial and angular misalignment, as well as lateral misalignment when two sets are used in series. Torque is transmitted with zero backlash across the frictional engagement of the assembly and not by the grade 12.9 screws themselves. Thus micro movements are avoided, vastly extending the service life of the coupling.

METAL BELLows COUPLINGS

GENERAL INFORMATION ABOUT R+W BELLows COUPLINGS:

Optional:

SERVICE LIFE

R+W bellows couplings are fatigue resistant and wear free for an infinite service life, as long as the technical limits are not exceeded.

FIT CLEARANCE

Overall shaft / hub clearance of 0.01 - 0.05 mm

ROTATIONAL SPEED

Standard up to 10,000 rpm.
Over 10,000 rpm in finely balanced version; up to grade ISO G=2.5 is available.

TEMPERATURE RANGE

-30 to +100° C

SPECIAL SOLUTIONS

Various materials, tolerances, dimensions and performance ratings available for custom applications on request.

ATEX (Optional)

For use in hazardous zones 1/21 and 2/22, the metal bellows has been authorized under directive 94/9/EG and is available with certification.

TORSIONALLY STIFF BELLows COUPLINGS SIZES FROM 2 - 10,000 Nm

MODEL	FEATURES	
BK2	 with clamping hub from 15 - 10,000 Nm ► easy to mount ► available in multiple lengths ► low moment of inertia	Page 34

BKH

WITH FULLY SPLIT CLAMPING HUB

15 - 4,000 Nm

ABOUT

FEATURES

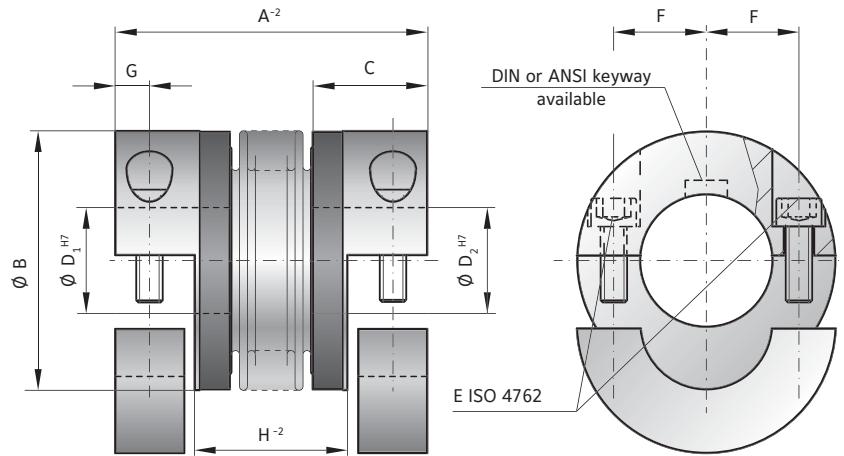

- radial mounting possible
- easy installation onto pre-aligned shafts
- low moment of inertia

MATERIAL

- **Bellows:** high grade stainless steel
- **Hubs:** see table

DESIGN

Two split clamping hubs with two screws in each. Brief overloads of up to 1.5x the rated torque are acceptable.

BKL

WITH CLAMPING HUB

2 – 500 Nm

ABOUT

**Optional:**

self-opening clamp system to open the bore during installation and removal by backing out the clamping screw.

FEATURES

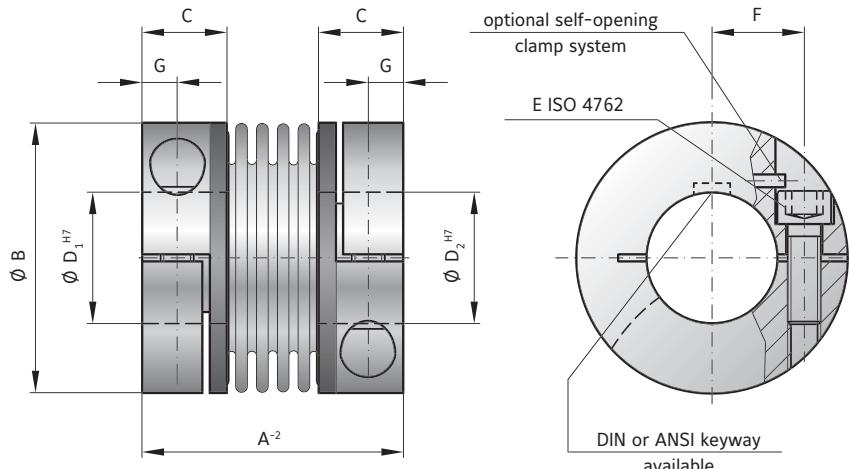

- easy to mount
- light weight and low moment of inertia
- economical design

MATERIAL

- **Bellows:** high grade stainless steel
- **Hubs:** see table

DESIGN

Two clamping hubs concentrically mounted to flexible bellows. Brief overloads of up to 1.5x the rated torque are acceptable.

BKS

WITH STAINLESS STEEL CLAMPING HUB

15 - 500 Nm

ABOUT

FEATURES

- for high temperatures and aggressive media
- compact design
- easy to mount

MATERIAL

- **Bellows:** high grade stainless steel
- **Hubs:** high grade stainless steel

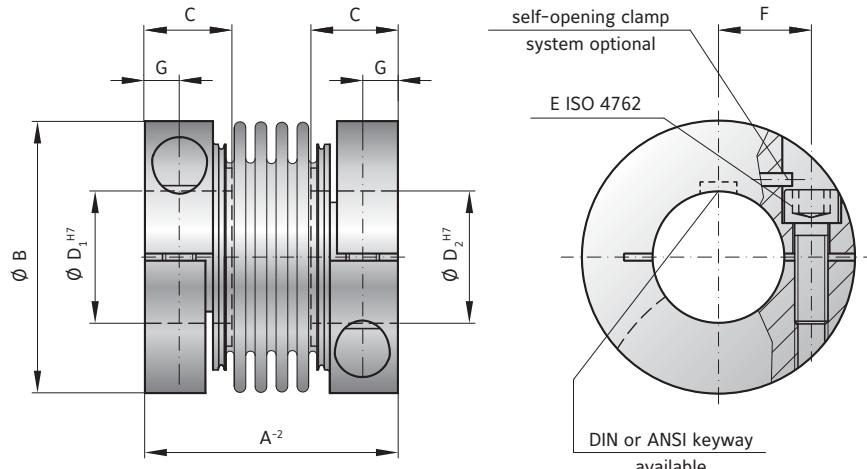

- **Screws:** Grade 12.9 Geomet coated (alternate materials on request)

DESIGN

Two clamping hubs concentrically mounted to flexible bellows. Brief overloads of up to 1.5x the rated torque are acceptable. From -40° to +300°C operating temperature.

Optional:

self-opening clamp system to open the bore during installation and removal by backing out the clamping screw.

MODEL BKS

ULTRA COMPACT AND STIFF WITH CLAMPING HUB 20 - 1,000 Nm

ABOUT

FEATURES

- extremely compact
- high torque density
- low mass and moment of inertia

MATERIAL

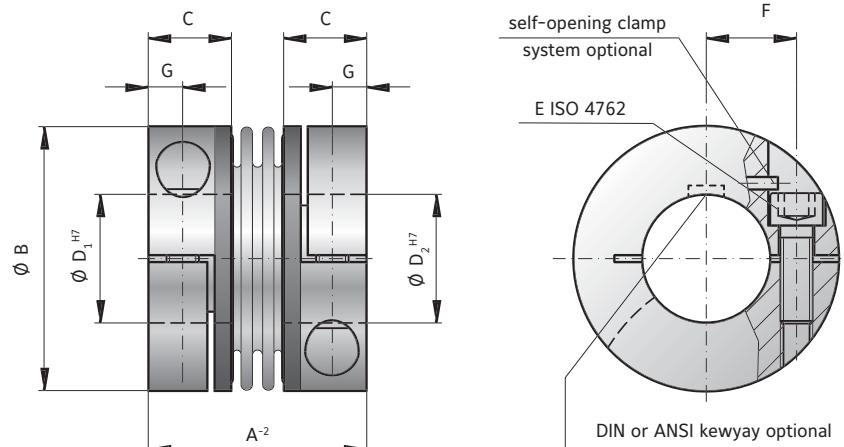

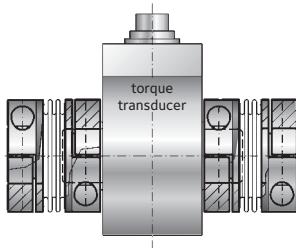

- **Bellows:** high grade stainless steel
- **Hubs:** see table

DESIGN

Two clamping hubs concentrically mounted to flexible bellows. Brief overloads of up to 1.5x the rated torque are acceptable.

Key application:

For mounting on a torque transducer.

BK4

FOR TAPERED SHAFTS

15 - 150 Nm

ABOUT

FEATURES

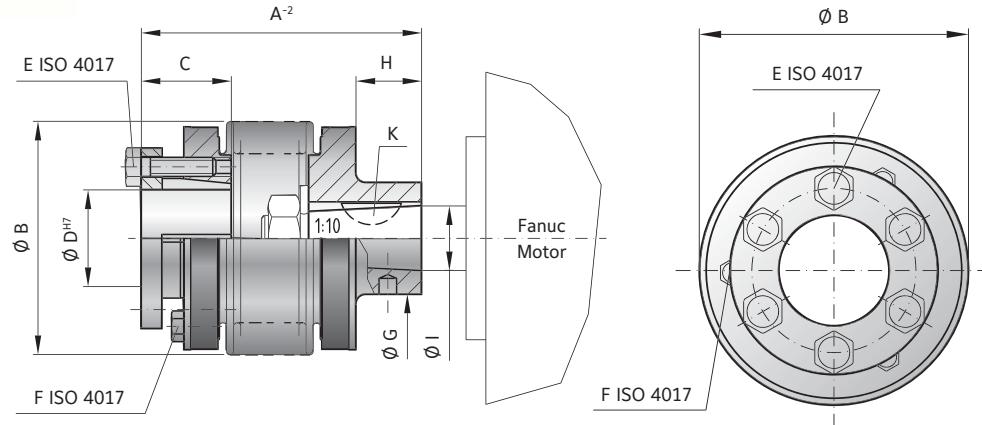

- for tapered shafts
- easy to mount and dismount
- high installed concentricity

MATERIAL

- **Bellows:** high grade stainless steel
- **Hubs:** steel

DESIGN

Conical clamping system opposite 1:10 tapered bore with feather keyway.
Brief overloads of up to 1.5x the rated torque acceptable.

BK5

BLIND MATE WITH CLAMPING HUB

15 - 1,500 Nm

ABOUT

FEATURES

- easy installation and removal
- electrically and thermally isolating
- absolutely backlash free assembly

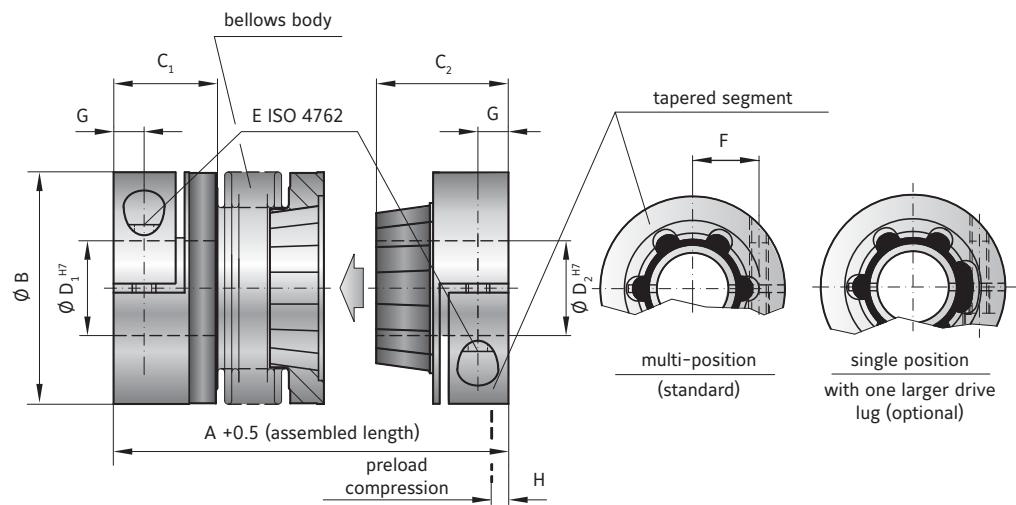

MATERIAL

- **Bellows:** high grade stainless steel
- **Hubs:** up through size 80 Aluminum, size 150 and up steel

- **Tapered male segment:** high strength plastic

DESIGN

Two clamping hubs, one of which has a tapered male projection for bind mate connection. Brief overloads of up to 1.5x the rated torque are acceptable.

BK6

BLIND MATE WITH CONICAL CLAMPING RING

15 - 1,500 Nm

ABOUT

FEATURES

- axial mounting possible
- easy installation and removal
- naturally very well balanced due to self centering clamping ring system
- absolutely backlash free assembly

MATERIAL

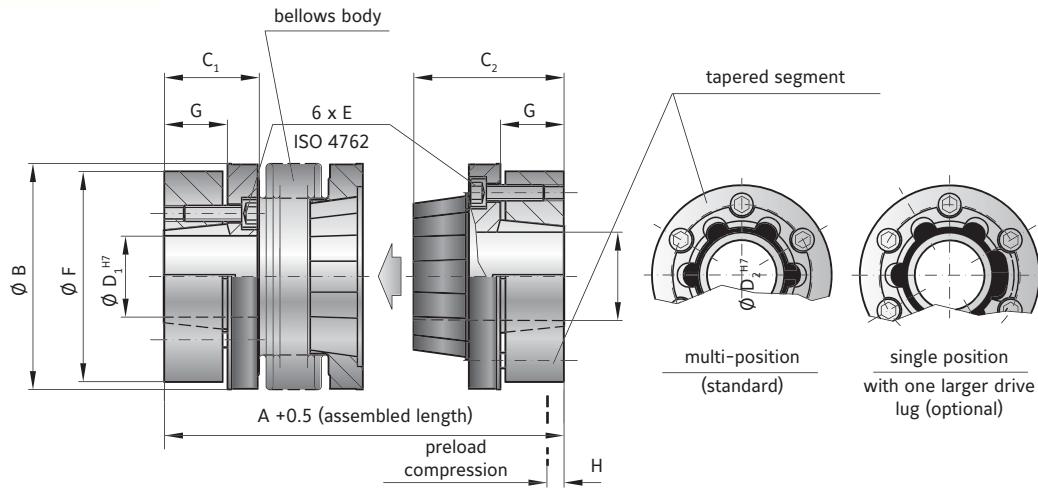

- **Bellows:** high grade stainless steel
- **Hubs:** steel

- **Tapered male segment:** high strength plastic

DESIGN

Two conical clamping ring hubs, one of which has a tapered male projection for bind mate connection.

Brief overloads of up to 1.5x the rated torque are acceptable.

BK7

WITH EXPANDING SHAFT

15 – 300 Nm

ABOUT

FEATURES

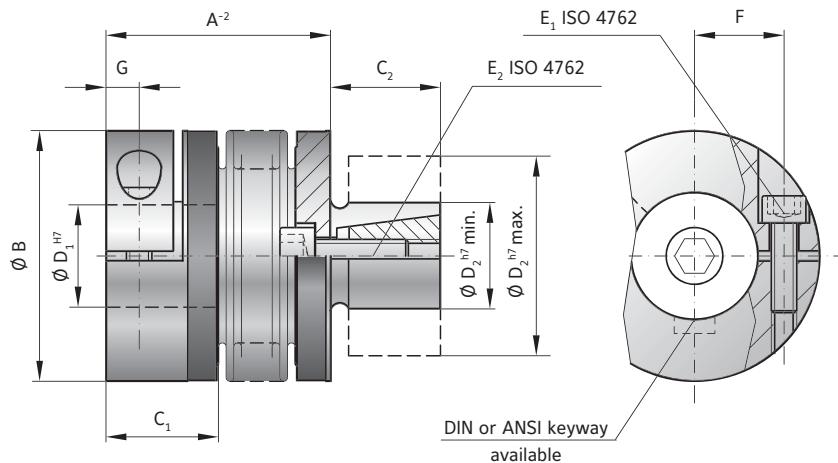

- for hollow shaft mounting
- short design saves installation space
- solution for mismatched shaft / bore

MATERIAL

- **Bellows:** high grade stainless steel
- **Hubs:** see table
- **Expanding mandrel system:** steel

DESIGN

One clamping hub on one end with an expanding shaft on the other end. Brief overloads of up to 1.5x the rated torque are acceptable.

BK8

WITH ISO FLANGE CONNECTION

50 - 2,600 Nm

ABOUT

FEATURES

- for ISO flange output gearboxes
- allows for continuous hollow through axis with some right angle gearbox designs
- compact design

MATERIAL

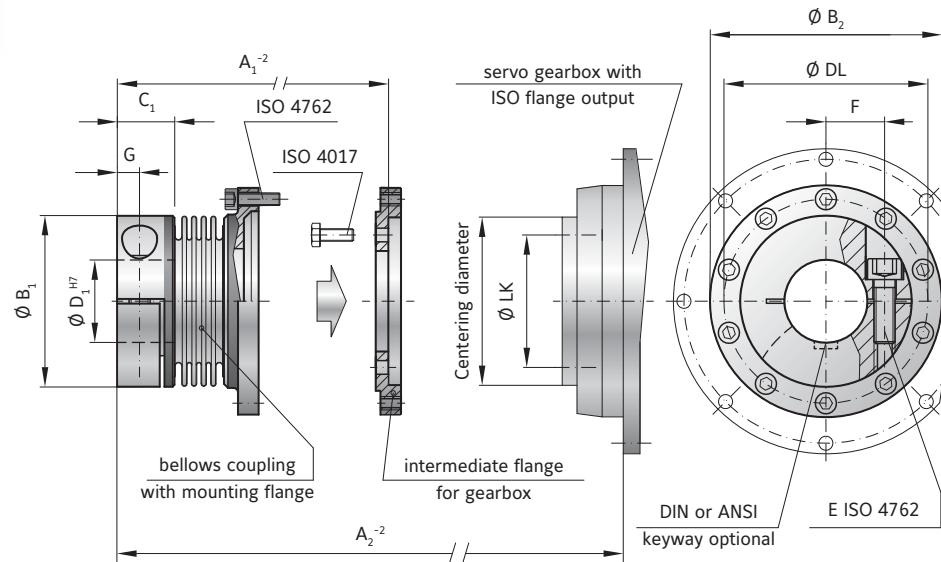

- **Bellows:** high grade stainless steel

- **Hubs:** up through size 300 aluminum, size 1500 and up steel

- **Adapter flange:** steel

DESIGN

One clamping hub on one end with an integral flange and adapter flange on the other end. Maximum transmittable torque depends on the bore diameter.

MODEL BK8

BK1

WITH FLANGE MOUNTING

15 - 10,000 Nm

ABOUT

FEATURES

- For simple flange mounting to special drive components
- custom flange patterns available

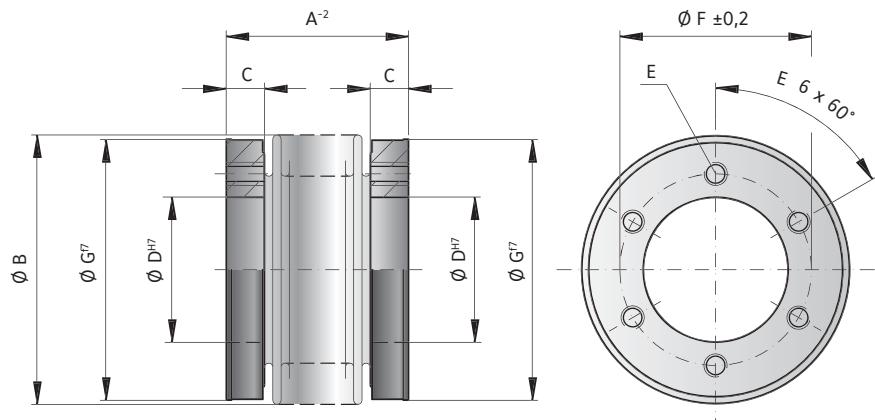

MATERIAL

- **Bellows:** high grade stainless steel

► Hubs: steel

DESIGN

Two mounting flanges concentrically assembled to the flexible bellows. Brief overloads of up to 1.5x the rated torque are acceptable.

BELLOWS
COUPLINGS BK

SIZES FROM 0.05- 10 Nm

BACKLASH FREE MINIATURE METAL BELLOWS COUPLINGS

GENERAL INFORMATION ABOUT R+W MINIATURE BELLOWS COUPLINGS:

SERVICE LIFE

R+W bellows couplings are fatigue resistant and wear free for an infinite service life, as long as the technical limits are not exceeded.

FIT CLEARANCE

Overall shaft / hub clearance of 0.01 - 0.05 mm

ROTATIONAL SPEED

Standard up to 10,000 rpm.
Over 10,000 rpm in finely balanced version; up to grade ISO G=2.5 is available.

TEMPERATURE RANGE

-30 to +110° C

SPECIAL SOLUTIONS

Various materials, tolerances, dimensions and performance ratings available for custom applications on request.

ATEX (Optional)

For use in hazardous zones 1/21 and 2/22, the metal bellows has been authorized under directive 94/9/EG and is available with certification.

BACKLASH FREE, TORSIONALLY STIFF MINIATURE COUPLINGS

MK1

WITH RADIAL SET SCREWS

0.05 - 10 Nm

ABOUT

FEATURES

- integral dismounting groove eliminates the need for flats on shafts
- economical design
- larger bore diameters in a small size possible

MATERIAL

- **Bellows:** size 0.5 tombac; sizes 1 and up high grade stainless steel

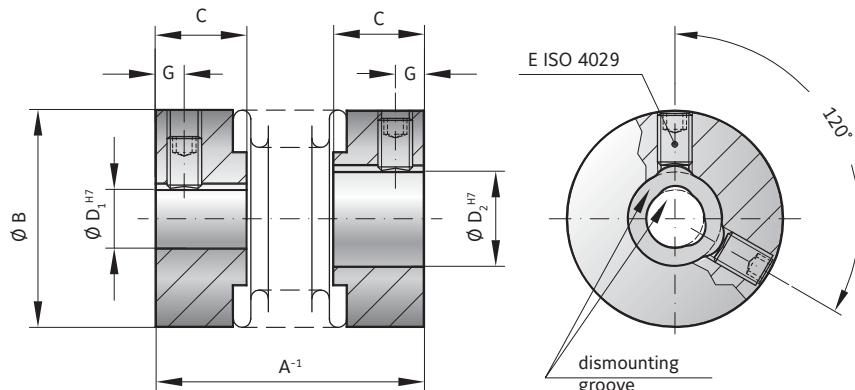

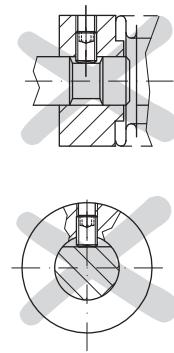

- **Hubs:** aluminium

DESIGN

Two hubs with radial set screws concentrically mounted to flexible bellows. Speeds up to 20,000 rpm; over 20,000 with finely balanced version.

Advantage:

Bore diameters above 4mm have an integral dismounting groove, which provides clearance over any burr which may be kicked up by the set screw, eliminating the need for flats on shafts.

Special designation only
(e.g. high speed balancing).

MK2

WITH CLAMPING HUB

0.5 - 10 Nm

ABOUT

FEATURES

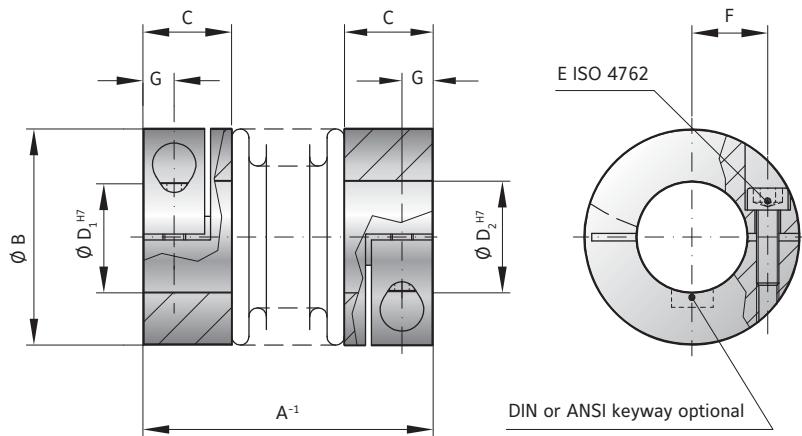

- for highly dynamic applications
- easy installation
- light weight and low moment of inertia

DESIGN

Two clamping hubs concentrically mounted to flexible bellows.

MATERIAL

- **Bellows:** high grade stainless steel
- **Hubs:** aluminium

MODEL MK2

MKH

WITH FULLY SPLIT CLAMPING HUB

0.5 - 10 Nm

ABOUT

FEATURES

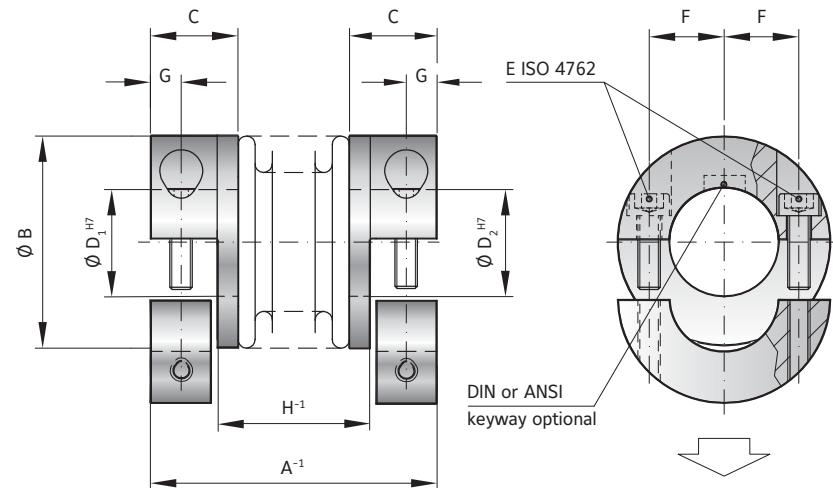

- mounts laterally
- allows for pre-alignment of shafts
- light weight and low moment of inertia

MATERIAL

- **Bellows:** high grade stainless steel
- **Hubs:** aluminium

DESIGN

Two fully split clamping hubs, with two screws in each, concentrically mounted to flexible bellows.

MODEL MKH

MK3

WITH EXPANDING SHAFT

0.5 - 10 Nm

ABOUT

FEATURES

- for hollow shaft mounting
- easy to install
- light weight and low moment of inertia

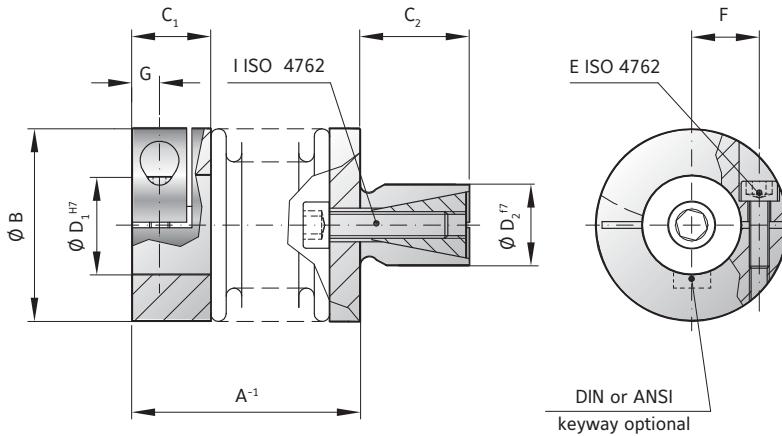

MATERIAL

- **Bellows:** high grade stainless steel
- **Clamping hub:** aluminium

► Expanding shaft: steel

DESIGN

One clamping hub with one clamping screw, one expanding shaft system, both concentrically mounted to flexible bellows.

MODEL MK3

MK4

BLIND MATE CONNECTION WITH RADIAL SET SCREWS 0.5 - 10 Nm

ABOUT

FEATURES

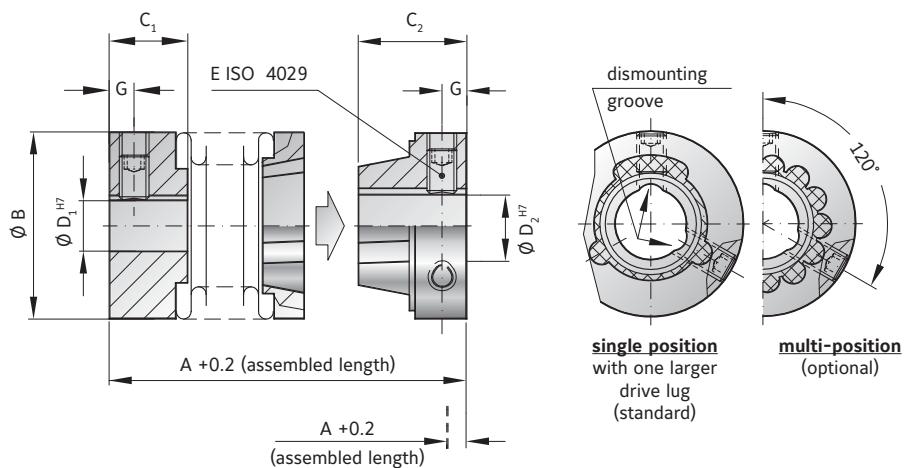

- easy installation and removal
- electrically and thermally isolating
- absolutely backlash free assembly

MATERIAL

- **Bellows:** high grade stainless steel
- **Hubs:** aluminium
- **Tapered male segment:** high strength plastic

DESIGN

Two hubs with radial set screws, one of which has a tapered male projection for bind mate connection. Speeds up to 20,000 rpm; over 20,000 with finely balanced version.

MODEL MK4

MKS

WITH CONICAL CLAMPING RING ASSEMBLY

4.5 - 10 Nm

**High speed**

ABOUT

FEATURES

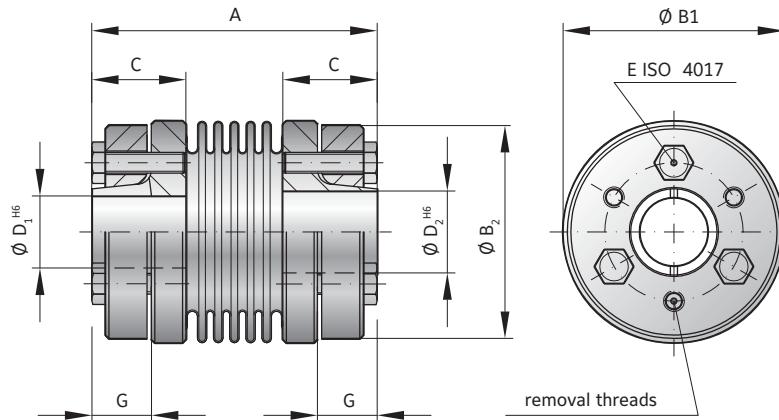

- made for high speed
- self centering conical clamping ring assembly
- naturally very well balanced

DESIGN

Two conical clamping ring assemblies with three or four screws. Maximum speed up to 120,000 with standard balance grade ISO G=2.5.

MATERIAL

- **Bellows:** high grade stainless steel
- **Hubs and clamping rings:** aluminium

MODEL MKS

BKL/003

ECOFLEX® WITH CLAMPING HUB

3 Nm

ABOUT

FEATURES

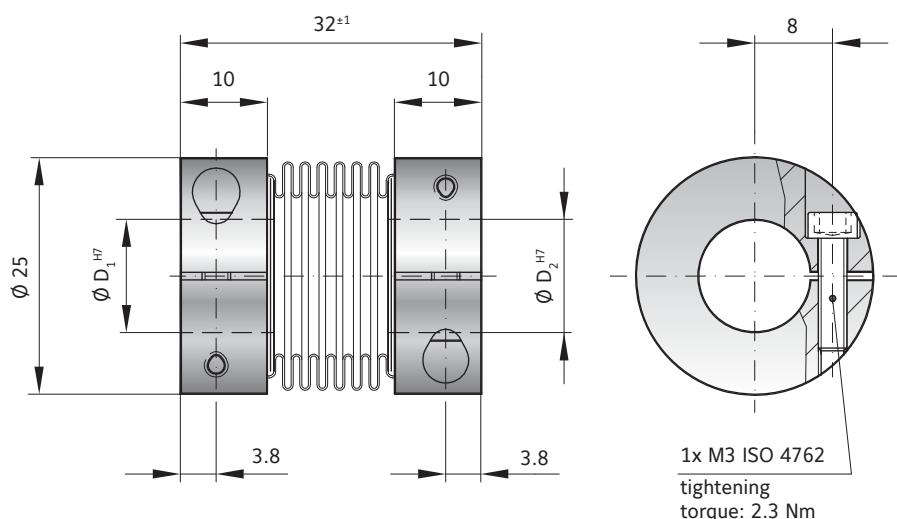

- economically priced
- backlash free and torsionally stiff
- wear free and robust

DESIGN

Two clamping hubs, each with a clamping screw.
Operational from -40 to +200° C

MATERIAL

- **Bellows:** high grade stainless steel
- **Hubs:** aluminium

MODEL BKL/003

SIZE	3
Rated torque (Nm)	T _{KN}
Standard bore diameters H7 (mm)	D ₁ /D ₂
Moment of inertia (gcm ²)	J _{ges.}
Approximate weight (g)	
Tightening torque of the fastening screws (Nm)	2.3
Torsional stiffness (Nm/rad)	C _T
Axial (mm)	1
Lateral (mm)	0.2
Angular (degree)	2

ECOFLEX®:

The low cost alternative for encoders, potentiometers, stepper motors, and small servo drives.

ORDERING EXAMPLE	BKL	003	3	6.35	XX
Model	●				
Size		●

FK1

MICROFLEX WITH RADIAL SET SCREWS

1 Ncm

ABOUT

FEATURES

- very small dimensions
- backlash free
- vibration damping

MATERIAL

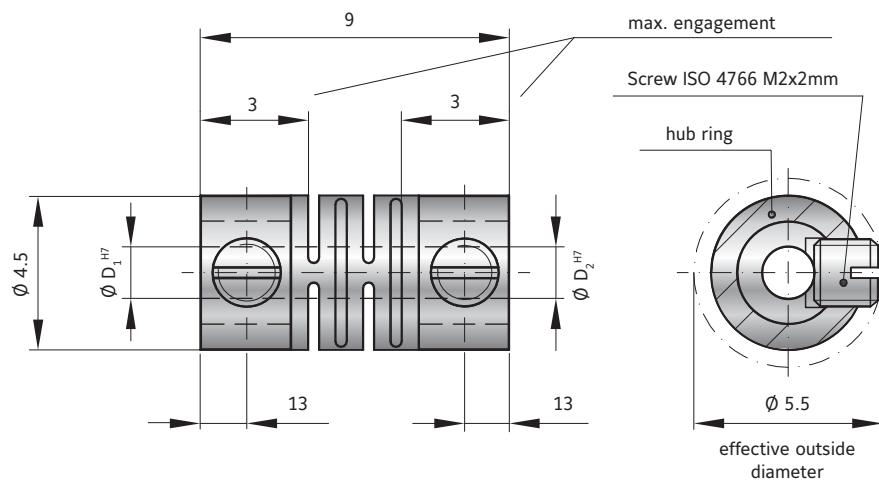

- **Flex element:** high strength Polyamide
- **Hubs:** stainless steel

DESIGN

Two hubs with set screws mounted to a flex beam segment. Operational from -35° to +80° C. Speeds up to 20,000 rpm *

SPECIAL SOLUTION

Effective outside diameter can be reduced to 4.5mm through the use of M2x1.5mm screws.

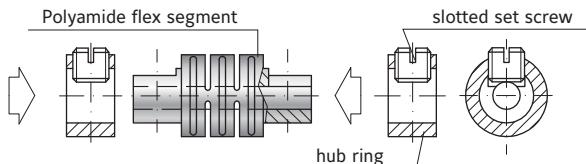

MODEL FK1/001/9

SIZE

Rated torque	(Ncm)	T_{KN}	1
Standard bore H7	(mm)	D_1/D_2	1.5 / 1.5 or 2 / 1.5 additional bore diameters available upon request
Moment of inertia	(gcm ²)	$J_{ges.}$	5.39
Approximate weight	(g)		0.47
Torsional stiffness	(Ncm/rad)	C_T	23 (measured at +20° C)
Axial	(mm)		0.2
Lateral	(mm)	Max. values	0.1
Angular	(degree)		1.5

COUPLING ASSEMBLY AND MOUNTING

The screw threads through the clamping ring, through a slot in the flexible segment, and down onto the shaft, securing the entire assembly. Including a flat on the shaft can improve torque transmission.

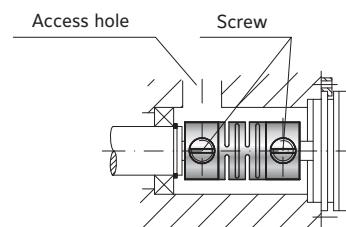

Caution: Always use a precisely calibrated torque wrench during installation.

ORDERING EXAMPLE	FK1	001	9	1.5	1.5	XX	Special designation only (e.g. special screw size).
Model	●						
Size		●					
Overall length mm			●				
Bore D1 H7				●			
Bore D2 H7					●		

For custom features place an XX at the end of the part number and describe the special requirements (e.g. FK1/001/9/1.5/1.5/XX; XX=M2x1.5mm screws)

DISMOUNTING

For dismounting, simply loosen the set screws and remove the coupling from the shafts.

GENERAL INFORMATION

R+W ELASTOMER COUPLINGS

AXES OF MISALIGNMENT

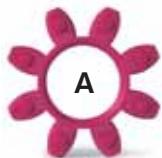

FUNCTION

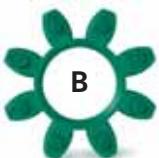

The equalizing element of the EK coupling is the elastomer insert. It transmits torque without backlash or vibration. The elastomer insert defines the characteristics of the entire drive system.

Backlash is eliminated by the press fit of the elastomer into the hubs. Through variation of the Shore hardness of the elastomer insert, the coupling system can be optimized for the ideal torsional characteristics.

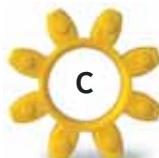

SIZES 2 - 800

Shore hardness 98 A

Shore hardness 64 Sh D

Shore hardness 80 Sh A

Shore hardness 65 Sh D

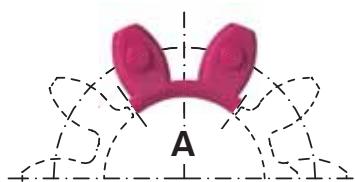

E

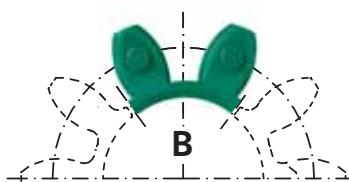

Shore hardness 64 Sh D

SIZES 2500 - 9500

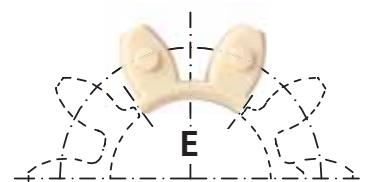

THE COUPLING INCLUDES 5X ELASTOMER SEGMENTS

Shore hardness 98 A

Shore hardness 64 Sh D

Shore hardness 64 Sh D

DESCRIPTION OF THE ELASTOMER TYPES

Type	Shore hardness	Color	Material	Relative damping (μ)	Temperature range	Features
A	98 Sh A	red	TPU	0.4 - 0.5	-30°C to +100°C	high damping
B	64 Sh D	green	TPU	0.3 - 0.45	-30°C to +120°C	high torsional stiffness
C	80 Sh A	yellow	TPU	0.3 - 0.4	-30°C to +100°C	very high damping
D*	65 Sh D	black	TPU	0.3 - 0.45	-10°C to +70°C	electrically conductive
E	64 Sh D	beige	Hytrel	0.3 - 0.45	-50°C to +150°C	temperature resistant

* The electrical conductivity of the elastomer material is to prevent the electrostatic charging of the elastomer coupling system, to reduce the risk of sparking in operation. ATEX technical data is available upon request.

The values of the relative damping were determined at 10 Hz and +20° C.

EKH

WITH FULLY SPLIT CLAMPING HUB

1,950 - 25,000 Nm

ABOUT

FEATURES

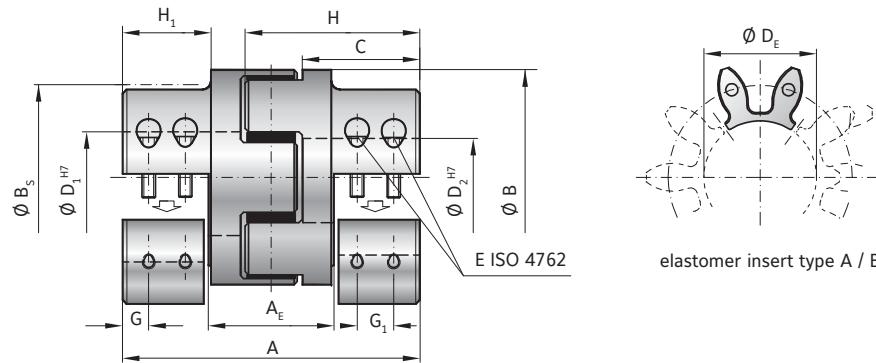

- lateral mounting
- easy installation and removal
- allows for pre-alignment of shafts

MATERIAL

- **Hubs:** GGG 40
- **Elastomer:** wear resistant thermally stable TPU

DESIGN

Two concentrically machined, fully split hubs with curved jaws and clamping screws. 5x elastomer segments press fit for zero backlash; standard versions are electrically isolating.

EK6

WITH CONICAL CLAMPING RING

4 - 2,150 Nm

ABOUT

FEATURES

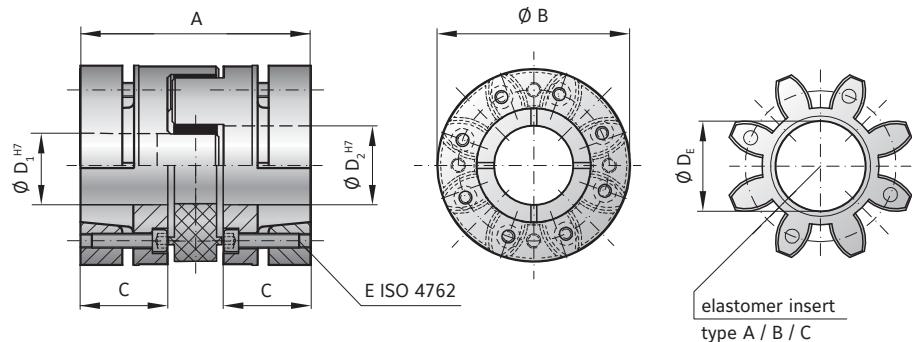

- high clamping pressure
- self centering on shaft
- very high concentricity

MATERIAL

- **Hubs:** up to size 450 high strength aluminum; size 800 steel
- **Elastomer:** wear resistant thermally stable TPU

DESIGN

Two concentrically machined hubs with curved jaws and conical clamping rings. Elastomer segments press fit for zero backlash; standard versions are electrically isolating.

TX1

WITH KEYWAY MOUNTING

0.5 - 810 Nm

ABOUT

FEATURES

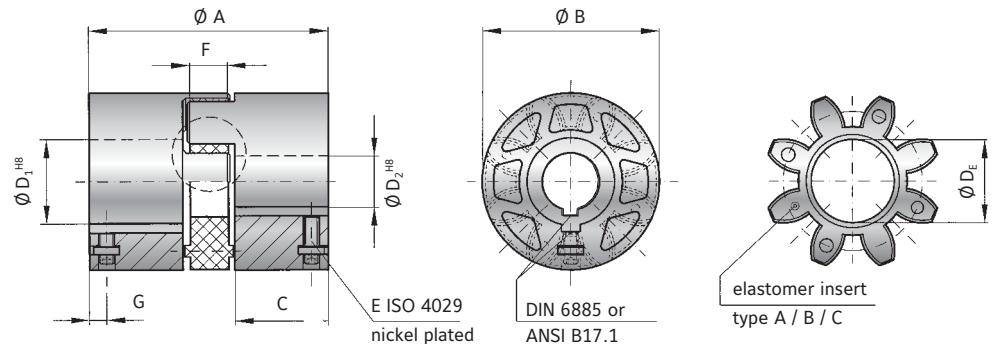

- very low mass and moment of inertia
- corrosion proof
- economically priced

MATERIAL

- **Hubs:** extremely rigid, glass fiber reinforced thermoplastic
- **Elastomer:** wear resistant thermally stable TPU

DESIGN

Two highly concentric, precision molded hubs with curved jaws, keyways, and set screws, suitable for use in temperatures ranging from -20 to +100°C. Elastomer is press fit for zero backlash. Coupling system is electrically isolating.

DESCRIPTION OF THE ELASTOMER TYPES IN THE TX SERIES

Type	Shore hardness	Color	Material	Relative damping (ψ)	Temperature range	Features
A	98 Sh A	red	TPU	0.4 - 0.5	-30°C to +100°C	high damping
B	64 Sh D	green	TPU	0.3 - 0.45	-30°C to +100°C	high torsional stiffness
C	80 Sh A	yellow	TPU	0.3 - 0.4	-30°C to +100°C	very high damping

FUNCTION

The equalizing element of the TX coupling is the elastomer insert. It transmits torque without backlash or vibration. The elastomer defines the characteristics of the entire drive system.

Through a special convex tooth geometry in the elastomer ring, greater shaft misalignment can be compensated for. Changing the Shore hardness of the elastomer allows the ECOLIGHT coupling to be optimized for ideal torsional characteristics.

BORE DIAMETER DEPENDS ON HUB STRUCTURE

EK7

WITH EXPANDING SHAFT

2 – 2,150 Nm

ABOUT

FEATURES

- for hollow shaft mounting
- short overall length
- solution for mismatched bore / shaft diameters

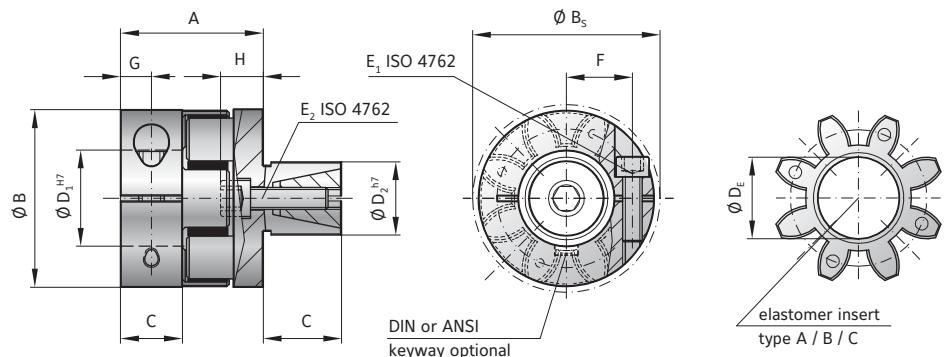

MATERIAL

- **Hubs:** up to size 450 high strength aluminum; size 800 steel
- **Expanding shaft hub:** steel

- **Elastomer:** wear resistant thermally stable TPU

DESIGN

One concentrically machined hub with clamping screw and curved jaws. One concentrically machined hub with expanding shaft system and curved jaws. Elastomer segment press fit for zero backlash; standard versions are electrically isolating.

EKZ

INTERMEDIATE SPACER

0.5 - 2,150 Nm

ABOUT

FEATURES

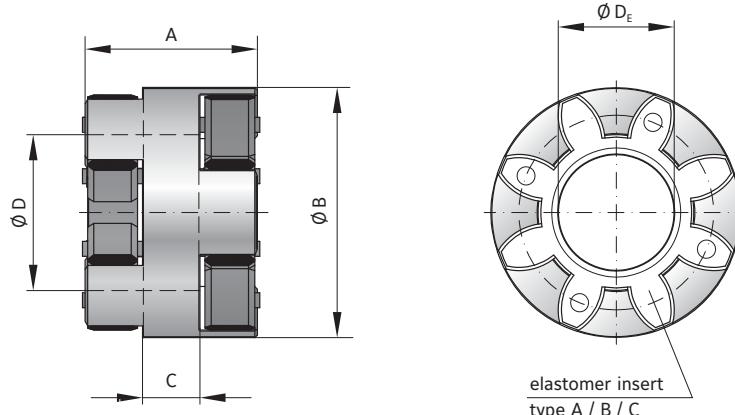

- high lateral misalignment
- easy to mount
- combine with any two hub designs

MATERIAL

- **Hubs:** high strength aluminum
- **Elastomer:** wear resistant thermally stable TPU

DESIGN

A concentrically machined spacer with curved jaws. 2x elastomer segment press fit for zero backlash; standard versions are electrically isolating.

BACKLASH FREE SAFETY COUPLINGS

SAFETY COUPLINGS
SK | ES | SL

GENERAL INFORMATION ABOUT R+W SAFETY COUPLINGS:

SERVICE LIFE

As long as the technical limits are not exceeded these couplings are wear and maintenance free.

FIT CLEARANCE

Overall shaft / hub clearance of 0.01 - 0.05 mm

SPECIAL SOLUTIONS

Various materials, tolerances, dimensions and performance ratings available for custom applications on request.

ATEX (Optional)

For use in hazardous zones 1/21 and 2/22, these safety couplings have been authorized under directive 94/9/EG and are available with certification.

GENERAL INFORMATION

SAFETY COUPLINGS

AVAILABLE FUNCTION SYSTEMS

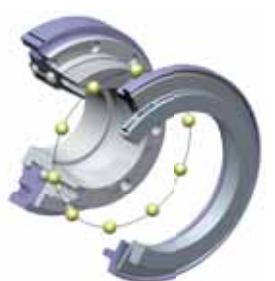

SAFETY COUPLINGS

SINGLE POSITION

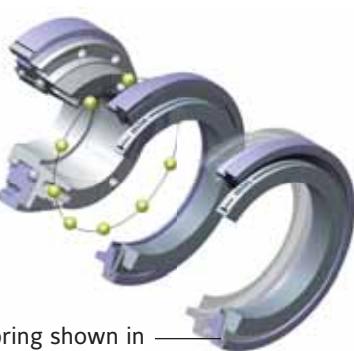

Standard Version

- after the overload condition has been removed the clutch will automatically re-engage precisely at its original orientation
- maintains synchronous shaft positioning
- switch plate moves at disengagement to signal overload
- patented preload for zero backlash; suitable for high precision drives

MULTI-POSITION

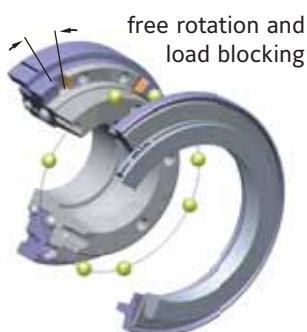

- after the overload condition has been removed the clutch will automatically re-engage at one of multiple angular intervals
- immediate availability of the machine after overload disengagement
- switch plate moves at disengagement to signal overload
- standard re-engagement interval is 60 degrees
- optional re-engagement intervals of 30, 45, 90, 120 degrees
- patented preload for zero backlash; suitable for high precision drives

FULL DISENGAGEMENT

- spring snaps over center, eliminating residual force on the ball-detent system
- complete separation at overload, allowing shafts to spin freely until they are stopped
- switch plate moves at disengagement to signal overload
- coupling requires manual re-engagement at multiple available intervals (60 degrees standard; alternate engagement intervals on request)
- well suited to higher speed applications

Note: Coupling can be disengaged manually. Contact R+W for details.

LOAD HOLDING / LOAD BLOCKING

- overload detection device
- only limited free rotation after overload disengagement, beyond which the clutch is fully blocked
- re-engages automatically when reversed back into original disengagement position
- switch plate moves at disengagement to signal overload
- useful in lift systems and other applications where the load must be supported after a brief torque release

GENERAL INFORMATION

SAFETY COUPLINGS

SINGLE POSITION
MULTI-POSITION
LOAD HOLDING

Note: Automatic
re-engagement only
occurs at low speed.

GENERAL INFORMATION

R+W safety couplings operate as spring loaded ball-detent clutches. They protect drive components (e.g. motors, transmissions, and spindles) from damage caused by machine crashes and other forms of overload.

- The torque is transmitted by hardened balls (4) loaded into conical detents (5).
- The balls are loaded into the detents by the spring disc system (2) across the switch plate (3).

- The disengagement torque is continuously adjustable via the torque adjustment nut (1).
- At overload the balls exit their detents, moving the switch plate (3) and disc spring system (2) back away from the detents, separating the input from the output of the safety coupling.
- The movement of the switch plate (3) can be detected by a proximity switch (6) to signal the drive to shut down.

FUNCTION OF THE BALL-DETENT SYSTEM

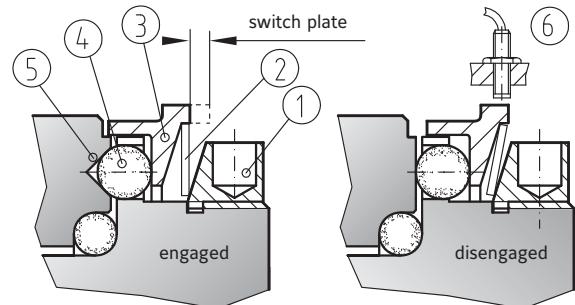

SINGLE POSITION / MULTI-POSITION

In these designs the disc spring system continues to apply a light residual pressure when in its disengaged state. This pressure is sufficient to cause automatic re-engagement after the torque has been reduced to a level below the torque setting of the safety coupling.

LOAD HOLDING / LOAD BLOCKING

The input and output of the safety coupling are only allowed limited free rotation after disengagement. This free rotation is sufficient to allow the switch plate to move and the overload condition to be signaled (see page 85).

① Torque adjustment nut ③ Switch plate ⑤ Conical detent
② Disc spring system ④ Drive ball ⑥ Proximity switch

GENERAL INFORMATION

SAFETY COUPLINGS

FULL DISENGAGEMENT

Only attempt
re-engagement when
the machine is stopped.

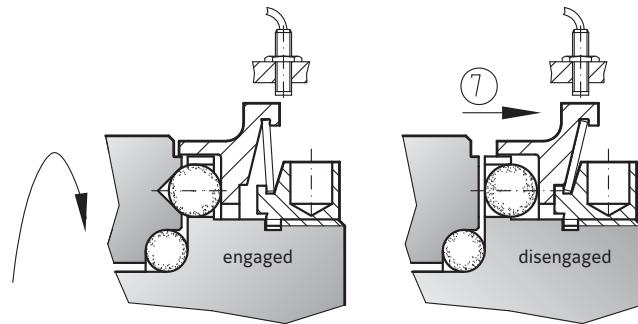

FUNCTION OF THE BALL-DETENT SYSTEM

SK ES2

FULL DISENGAGEMENT

In the full disengagement version the spring system (7) snaps over center, eliminating residual force on the ball-detent system. This causes a complete separation at overload, allowing shafts to spin freely until they are stopped.

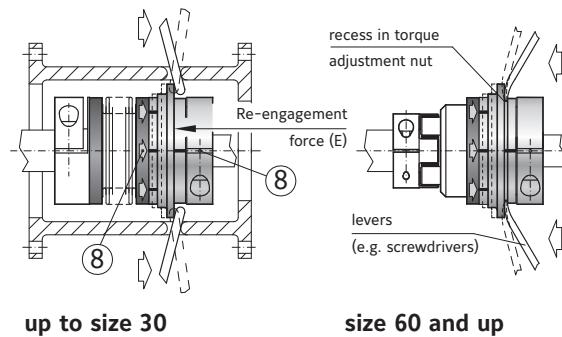

- Re-engagement must be performed manually (see figure at right).

BALL-DETENT CLUTCHES ARE THE SAME DESIGN IN THE SK AND ES2 SIZES

The R+W full disengagement safety coupling can be re-engaged at any of 6 intervals by pressing the spring system back into its locked position. The re-engagement intervals are indicated by reference markings (8) on the coupling.

From size 60 and up a recess is included in the torque adjustment nut, allowing for 2 levers to be used in a self contained fashion, as shown in the figure on the right.

GENERAL INFORMATION SAFETY COUPLINGS

BEHAVIOR AND CHARACTERISTICS

SPRING SYSTEM

R+W safety couplings work exclusively with a disc spring system with a special characteristic. Prior to the torque adjustment nut coming into contact with the disc springs and applying pressure (1) no torque transmission is possible. Once the spring is loaded, the active range of the spring system had been reached, with the spring rate declining as further compression takes place, both prior to, and during disengagement (2). Once completely depressed, the spring system is rigid (3).

As the safety coupling is in the process of disengaging, the spring force continues to decline. This advantage guarantees the shortest possible disengagement times (1-2 msec), very low wear while running disengaged, and very low residual friction in general (2-5%).

IMPORTANT!

The minimum and maximum torque values of the R+W safety couplings are at the limits of the active range of the disc spring system. Therefore it is critical not to exit the manufacturer specified torque adjustment range.

ROTATIONAL SPEED

The rotational speed at disengagement significantly influences the service life of the coupling. At lower speeds the coupling can handle many thousands of disengagements with no degradation to performance. Please contact R+W for details if applying the safety coupling to a high speed shaft.

WEAR

In its engaged state the safety coupling is completely wear free. Service life can be extended significantly by taking measures to stop shaft rotation quickly after disengagement.

MAINTENANCE

The R+W safety couplings are maintenance free and lubricated for life.

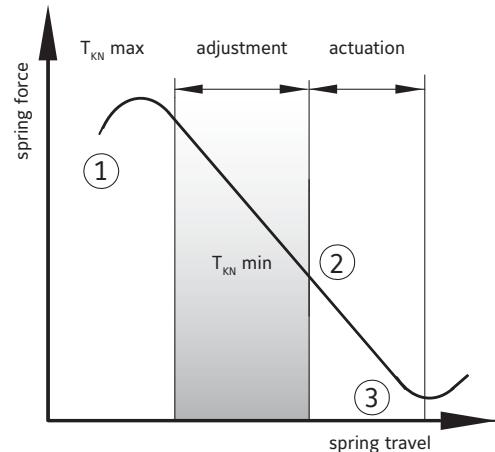

SAFETY COUPLING WITH SEAL (OPTIONAL)

Benefits of sealing:

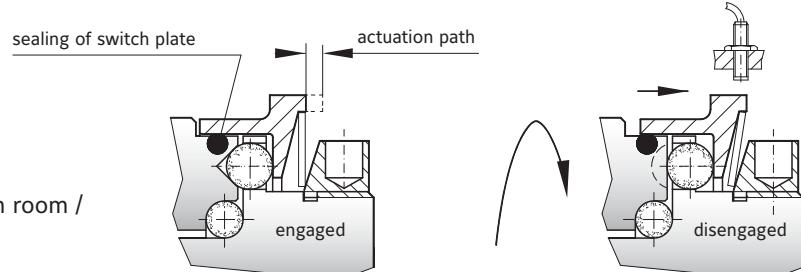

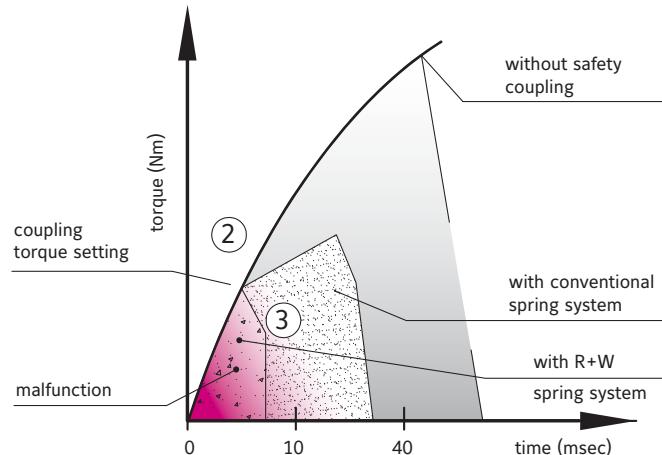

- ▶ Protection from harmful contaminants
- ▶ No leakage of grease
- ▶ Recommended for harsh environments or clean room / sanitary application requirements

SPRING CHARACTERISTIC

special design

DISENGAGEMENT

GENERAL INFORMATION

SAFETY COUPLINGS

RADIAL LOADS

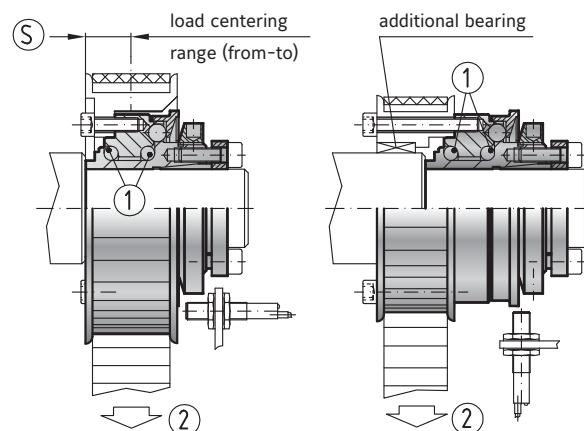

SAFETY COUPLINGS

The models shown above have an integral bearing (1) to support the drive attachment (e.g. timing belt or chain sprocket, gear, or hand wheel). The maximum radial load (2) is listed in the table below.

If the center of the overhung load is located within dimension range (S) no additional bearing support is necessary. For offset mounting additional bearings can be used to support the load. This is useful in cases where the attached component is too small to fit over the coupling output flange or has a large width.

Depending on the installation space, ball, roller or needle bearings can all be used.

WITH CONICAL CLAMPING BUSHING

0.1 - 2,800 Nm

Timing belt or chain sprocket only included upon request.

ABOUT

MATERIAL

- **Clutch system:** hardened steel
- **Clamping ring size 1.5 - 10:** aluminum
- **Conical clamping bushing size 15 - 2500:** steel

DESIGN

- Size 1.5 - 10 with clamping ring and a single clamping screw.
Size 15 - 2500 with conical clamping bushing and six screws.

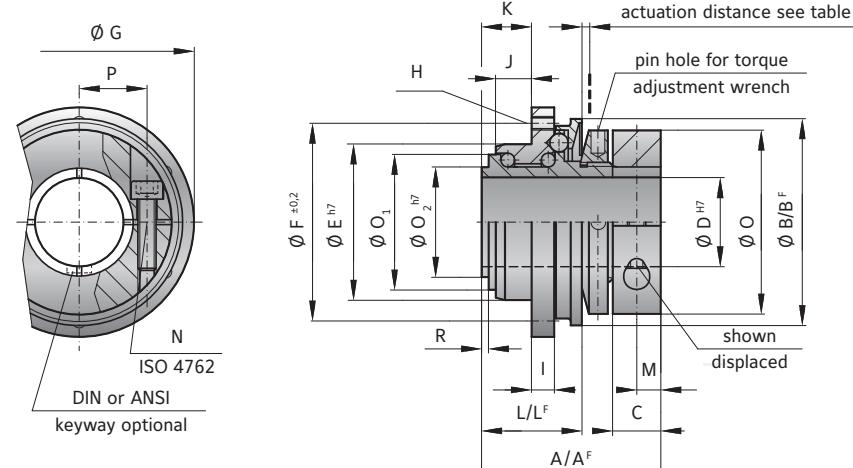

Clutch system: spring loaded ball-detent principle. Operable temperature range from -30 to +120° C.

AVAILABLE FUNCTION SYSTEMS

- W = Single position / automatic re-engagement (standard)
- D = Multi-position / automatic re-engagement
- G = Load holding / load blocking
- F = Full disengagement / manual re-engagement

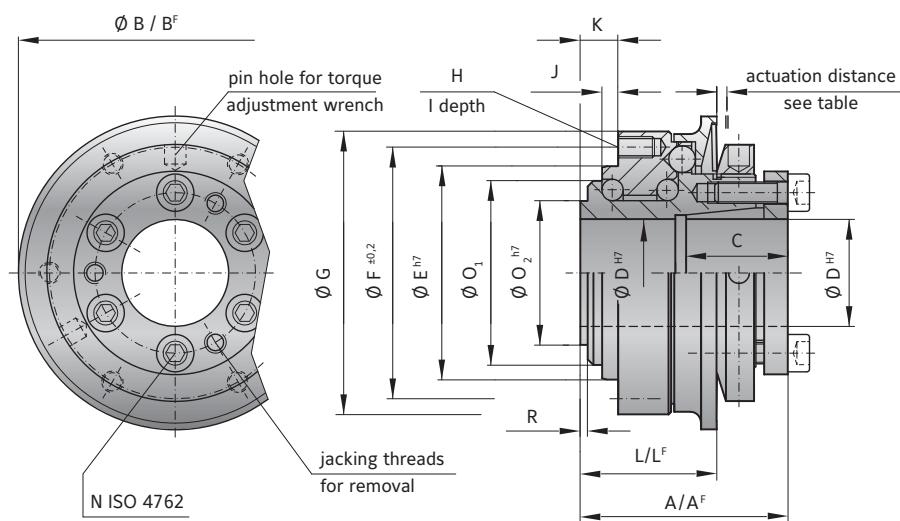

MINIATURE DESIGN | SIZE 1.5 - 10

SKP

WITH KEYWAY MOUNTING

0.1 - 2,800 Nm

ABOUT

Timing belt or chain sprocket only included upon request.

MATERIAL

- **Clutch system:** hardened steel

DESIGN

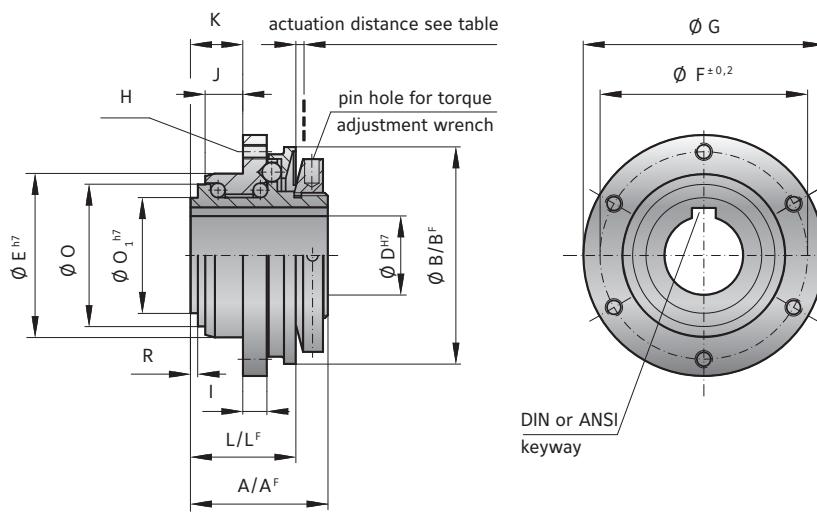

With DIN 6885 or ANSI B17.1 keyway.
Clutch system: spring loaded ball-detent principle. Operable temperature range from -30 to +120° C.

AVAILABLE FUNCTION SYSTEMS

- W = Single postion / automatic re-engagement (standard)
- D = Multi-position / automatic re-engagement
- G = Load holding / load blocking
- F = Full disengagement / manual re-engagement

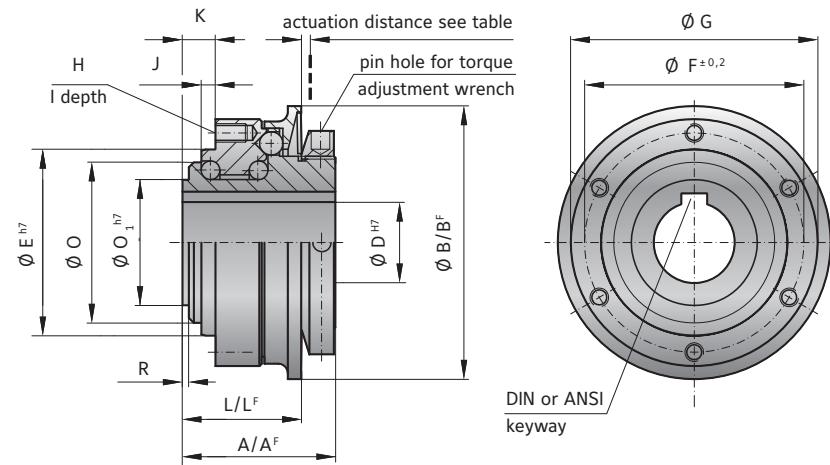

MINIATURE DESIGN | SIZE 1.5 - 10

Standard with keyway mounting

STANDARD DESIGN | SIZE 15 - 2,500

Standard with keyway mounting

SLN

WITH CLAMPING COLLAR

10 - 700 Nm

ABOUT

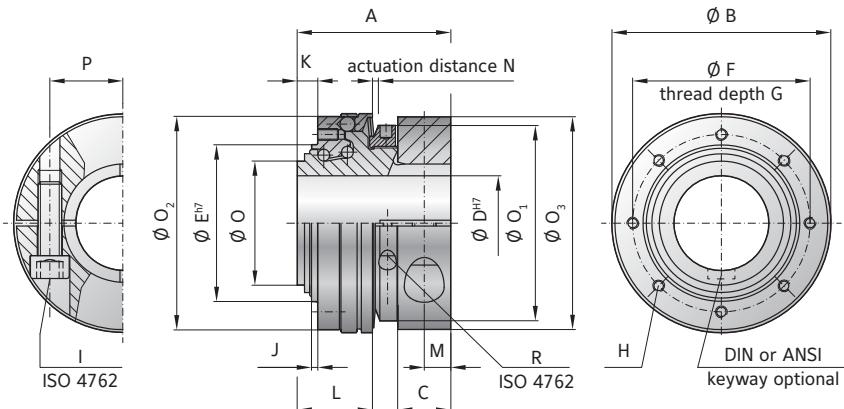

DESIGN

With clamping collar and a single clamping screw.
Clutch system: spring loaded ball-detent principle. Operable temperature range from -30 to +120° C.

AVAILABLE FUNCTION SYSTEMS

- W = Single position / automatic re-engagement (standard)
- D = Multi-position / automatic re-engagement

Special designation only (e.g. special bore / keyway dimensions).									

ES2

PRESS FIT ELASTOMER WITH CLAMPING HUB

1 - 1,800 Nm

ABOUT

MATERIAL

- **Clutch system:** hardened steel
- **Hub D1:** up to size 450 high strength aluminum, size 800 and up steel
- **Hub D2:** up to size 60 high strength aluminum, size 150 and up steel
- **Elastomer insert:** wear resistant thermally stable TPU

ORDERING EXAMPLE

see page 105

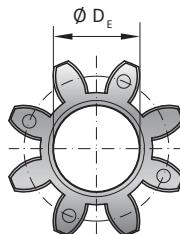

DESIGN

Two clamping hubs with one clamping

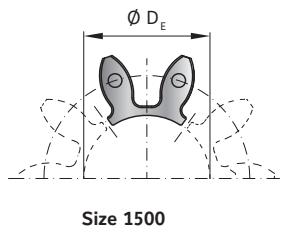

screw in each and concave driving jaws. Backlash free, vibration damping, electrically isolating elastomer insert press fit into the jaw sets. Clutch system: spring loaded ball-detent principle.

AVAILABLE FUNCTION SYSTEMS

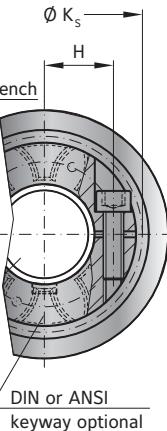

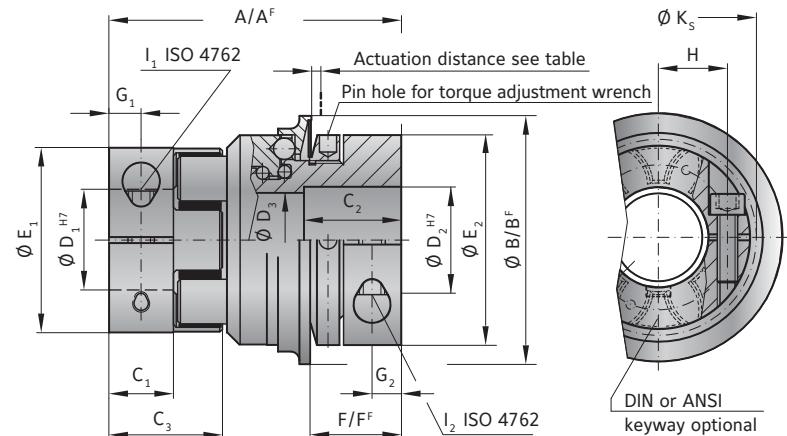

- W = Single position / automatic re-engagement (standard)
- D = Multi-position / automatic re-engagement
- G = Load holding / load blocking
- F = Full disengagement / manual re-engagement

ESL

WITH KEYWAY MOUNTING

1 - 150 Nm

ABOUT

MATERIAL

- **Clutch system:** high strength steel, drive balls made from hardened steel
- **Hubs:** high strength aluminum
- **Elastomer insert:** wear resistant, thermally stable TPU

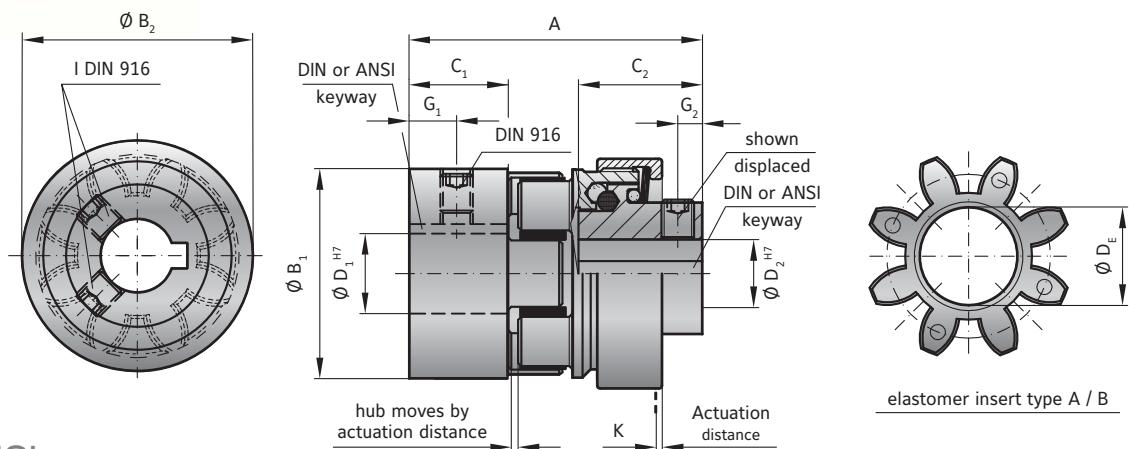

DESIGN

Two hubs, each with keyway, set screw, and concave driving jaws. Backlash free, vibration damping, electrically isolating

elastomer insert press fit into the jaw sets. The clutch system is integrated into one of the hubs. All couplings have a multi-position function system due to the spring loaded, interlocking ball system.

DISENGAGEMENT SPEED

Negligible wear at up to 200 rpm. Contact R+W for higher speed applications.

SAFETY COUPLING ACCESSORIES

SAFETY COUPLINGS
SK | ES | SL

ACCESSORIES FOR SK / ES2 / SL SAFETY COUPLINGS

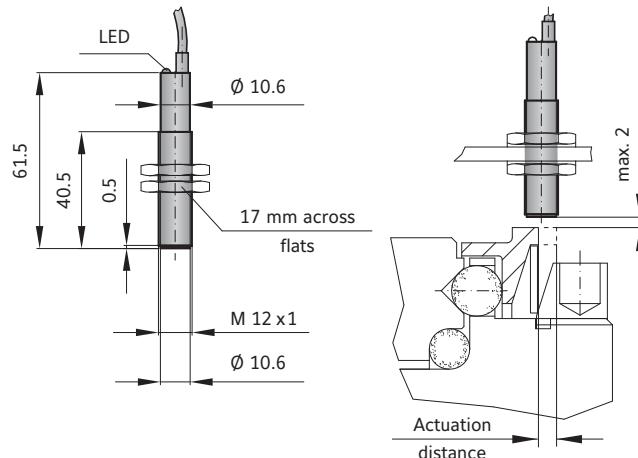

It is important that switches be 100% tested for proper functioning after mounting with safety coupling.

PROXIMITY SWITCH (E-STOP FUNCTION)

SK ES2

ORDER NUMBER 650.2703.001

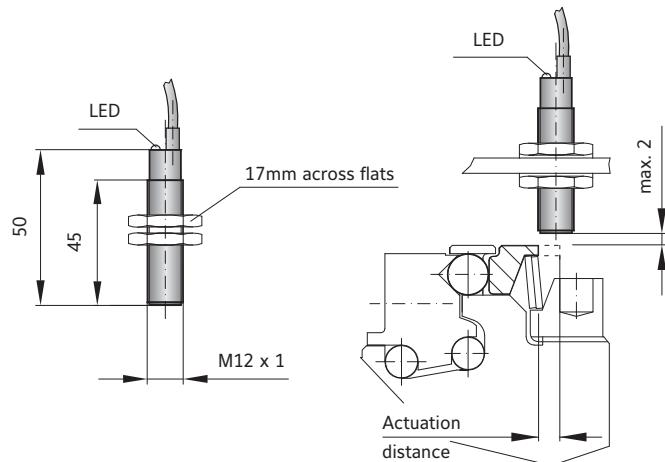

TECHNICAL DATA	SK, ES2
Voltage	10 to 30 V DC
Max. output current	200 mA
Max. switch frequency	800 KHz
Temperature range	-25° to +70° C
Protective system	IP 67
Switch type	normally open
Max. detection gap	max. 2 mm
SWITCH DIAGRAM SK, ES2	

SL

ORDER NUMBER 619.4711.650

TECHNICAL DATA	SL
Voltage	10 to 30 V DC
Max. output current	200 mA
Max. switch frequency	≤ 3 KHz
Temperature range	-25° to +70° C
Protective system	IP 67
Switch type	PNP, NO
Max. detection gap	max. 2 mm
SWITCH DIAGRAM SL	

It is important that switches be 100% tested for proper functioning after mounting with safety coupling.

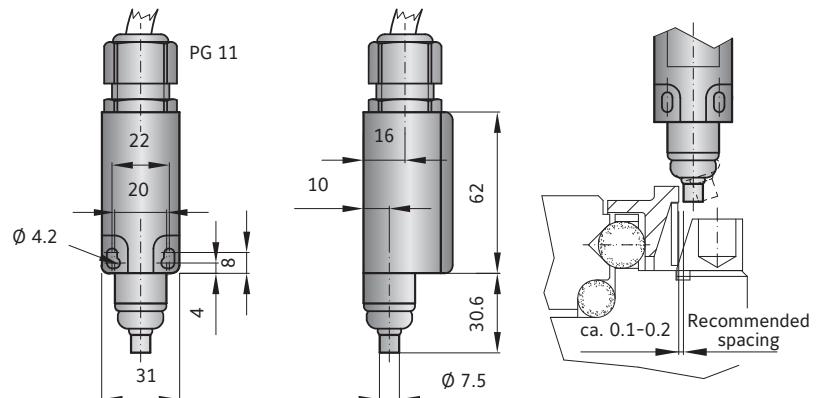

MECHANICAL LIMIT SWITCH (E-STOP FUNCTION)

ORDER NUMBER 618.6740.644

TECHNICAL DATA	SK, ES2, SL
Max. voltage	250 V AC
MAX. CONSTANT CURRENT:	2.5h A
Protective system	IP 65
Contact system	Opener (forced separating)
Temperature range	-30° to +80° C
Actuation	Plunger (metal)
SWITCH DIAGRAM SK, ES2, SL	

The mechanical limit switch is suitable for size 30 and up. For smaller safety couplings the proximity sensor is recommended.

The switch plunger (pictured above and right) should be located as close to the actuation ring / limit switch plate as possible (approximately 0.1-0.2mm).

ACCESSORIES FOR ATEX SAFETY COUPLINGS

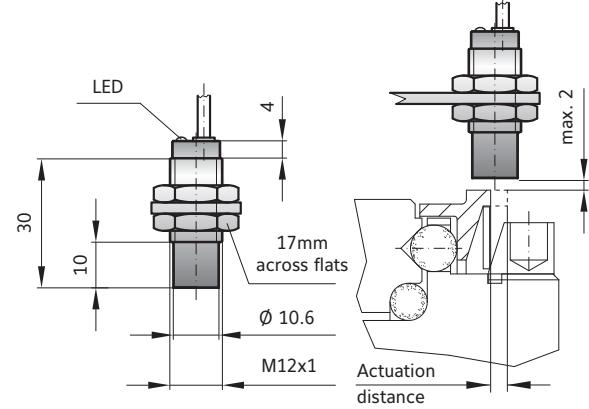

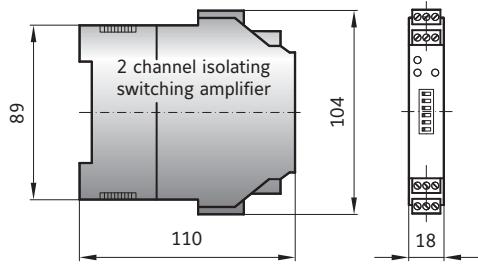

It is important that switches be 100% tested for proper functioning after mounting with safety coupling.

LINE SHAFT COUPLINGS

GENERAL INFORMATION R+W LINE SHAFT COUPLINGS:

SERVICE LIFE

R+W line shaft couplings are wear and maintenance free for an infinite service life, as long as the technical limits are not exceeded.

FIT CLEARANCE

Overall shaft / hub clearance of 0.01 - 0.05 mm

ROTATIONAL SPEED

After selecting overall length A, contact R+W for maximum speed.

SPECIAL SOLUTIONS

Various materials, tolerances, dimensions and performance ratings available for custom applications on request.

ATEX (Optional)

For use in hazardous zones 1/21 and 2/22, R+W line shaft couplings have been authorized under directive 94/9/EG and is available with certification.

BACKLASH FREE, TORSIONALLY STIFF LINE SHAFT COUPLINGS

ZAL

WITH FULLY SPLIT CLAMPING HUB AND CFK INTERMEDIATE TUBE, 10 - 800 Nm

ABOUT

FEATURES

- ▶ low moment of inertia
- ▶ for spanning larger distances between shaft ends
- ▶ standard lengths up to 6 meters
- ▶ no intermediate support bearings required
- ▶ good for higher speeds

MATERIAL

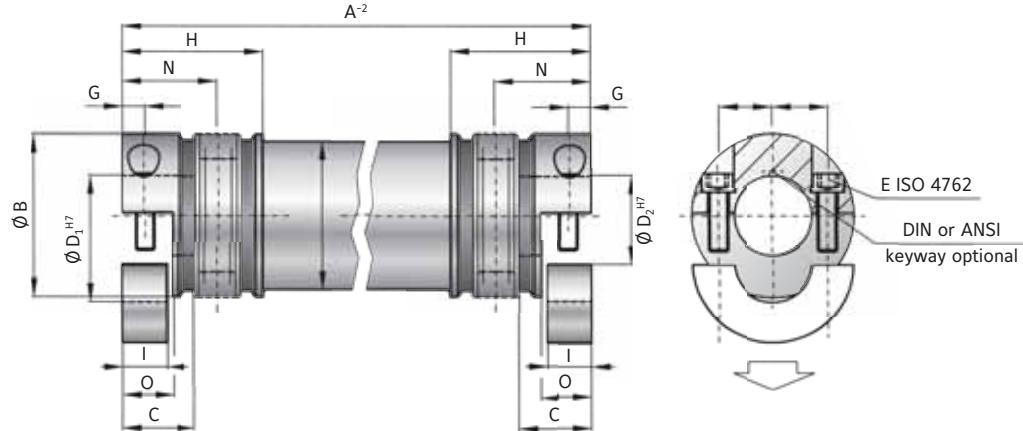

- ▶ **Bellows:** high grade stainless steel

► Intermediate tube: CFK

- ▶ **Hubs:** up to size 60 aluminum, size 150 and up steel

DESIGN

Two clamping hubs with two clamping screws in each. A special support system carries the weight of the tube on the hubs. Operable temperature range from -30 to +100 °C.

ZAL EZ

EZ2

WITH FULLY SPLIT CLAMPING HUB

12.5 - 25,000 Nm

ABOUT

FEATURES

- ▶ easy installation and removal
- ▶ standard lengths up to 4 meters
- ▶ no intermediate support bearings required

MATERIAL

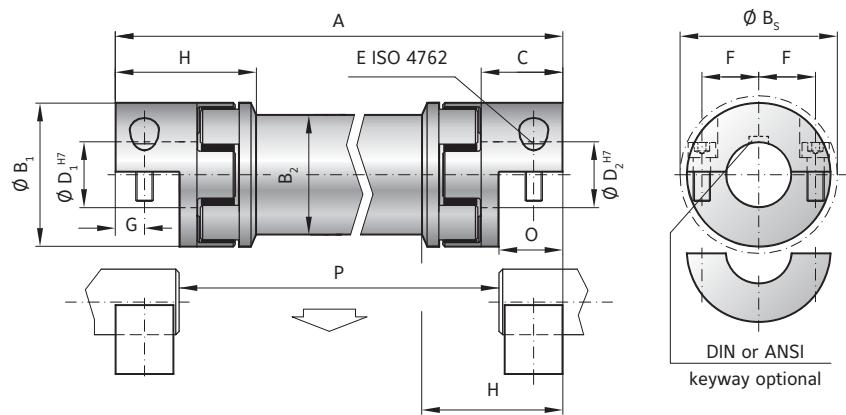

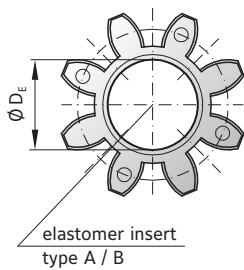

- ▶ **Hubs:** up to size 450 high strength aluminum, size 800 steel, size 2500 and up GGG40
- ▶ **Intermediate tube:** up to size 450 high strength aluminum, size 800 and up steel, optional CFK tube on request

- ▶ **Elastomer insert:** wear resistant, thermally stable TPU

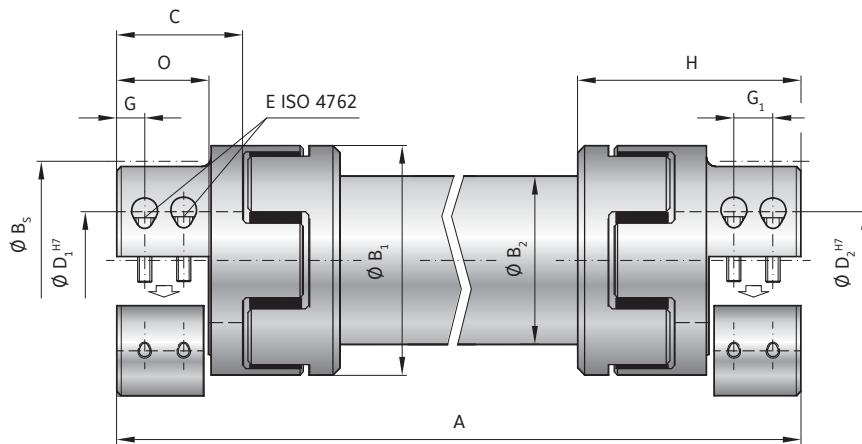

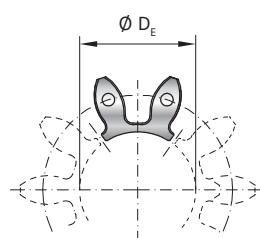

DESIGN

Two fully split clamping hubs, with two clamping screws in each, and concave driving jaws. Backlash free, vibration damping, electrically isolating elastomer inserts press fit into the hubs. Precision intermediate tube with a high level of straightness and lateral stiffness.

DESIGN | SIZE 10 - 800

DESIGN | SIZE 2,500 - 9,500

For details on the elastomer inserts see pages 66-67.

ADJUSTABLE LENGTH WITH FULLY SPLIT CLAMPING HUB 12.5 - 1,200 Nm

ABOUT

FEATURES

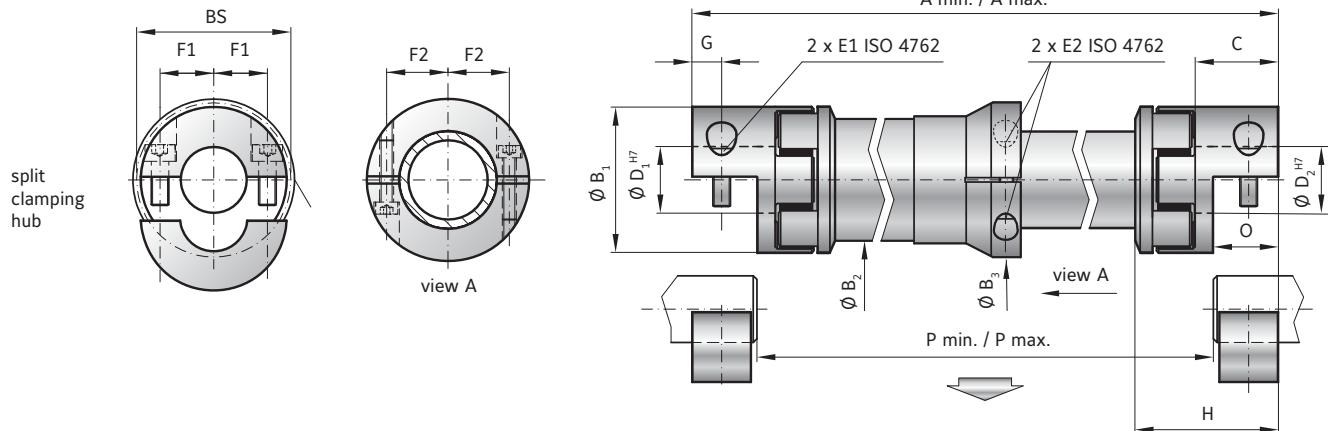

- ▶ telescoping for adjustable length and rotational orientation
- ▶ very easy to install and remove
- ▶ no intermediate support bearings required
- ▶ length ranges up to 4 meters

MATERIAL

- ▶ **Hubs:** high strength aluminum
- ▶ **Intermediate tube:** highly straight and concentric aluminum tubing
- ▶ **Elastomer insert:** wear resistant, thermally stable TPU

DESIGN

Two fully split clamping hubs, with two clamping screws in each, and concave driving jaws. Backlash free, vibration damping, electrically isolating elastomer inserts press fit into the hubs. Precision intermediate tube with a high level of straightness and lateral stiffness. Outer tube clamps over inner tube to fix the overall length.

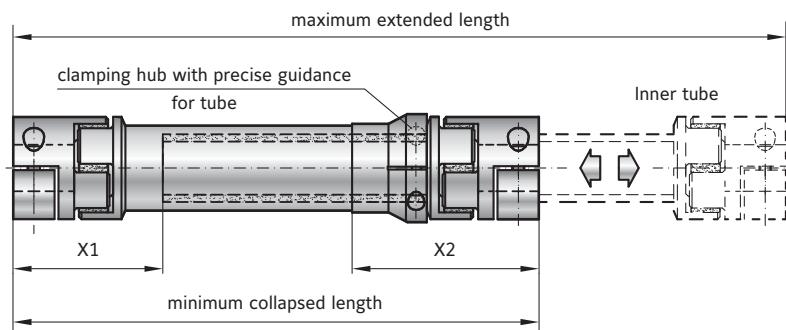

For details on the elastomer inserts see pages 66-67.

FUNCTIONAL DESCRIPTION

The maximum extended length relates to the minimum collapsed length. The formulas to the right can be used to determine the corresponding values.

Information on sizing, torsional stiffness, misalignment ratings, etc. can be found on pages 16-18.

$$\text{Maximum extended length} = (\text{collapsed length} \times 2) - \text{measurement } (X_1 + X_2)$$

$$\text{Minimum collapsed length} = \frac{\text{maximum extended length} + \text{dimension } (X_1 + X_2)}{2}$$

TORSIONALLY STIFF DISC PACK COUPLINGS

GENERAL INFORMATION ABOUT R+W DISC PACK COUPLINGS:

SERVICE LIFE

R+W disc pack couplings are fatigue resistant and wear free for an infinite service life, as long as the technical limits are not exceeded.

FIT CLEARANCE

Overall shaft / hub clearance of 0.01 – 0.05 mm

TEMPERATURE RANGE

-30 to +280° C

ROTATIONAL SPEED

see table

DELIVERY

LP couplings are delivered with the disc packs pre-assembled. They need only to be mounted to the hubs.

ATEX (Optional)

For use in hazardous zones 1/21 and 2/22, the disc pack coupling has been authorized under directive 94/9/EG and is available with certification.

TORSIONALLY STIFF DISC PACK COUPLINGS SIZES FROM 350 – 20,000 Nm

MODEL	FEATURES	
LP1	 with keyway mounting from 350 – 20,000 Nm <ul style="list-style-type: none">▶ very high torsional stiffness▶ single flex design▶ compact layout▶ compensates for axial and angular misalignment	Page 128
LP2	 with keyway mounting from 350 – 20,000 Nm <ul style="list-style-type: none">▶ high torsional stiffness▶ double flex design▶ customer specified length available▶ compensates for axial, angular, and lateral misalignment	Page 129
LP3	 with conical clamping ring from 350 – 20,000 Nm <ul style="list-style-type: none">▶ high torsional stiffness▶ high clamping pressure▶ backlash free torque transmission▶ good for high speed, reversing and intermittent loading	Page 130
LPA	 with keyway mounting for API 610 pump systems from 350 – 20,000 Nm <ul style="list-style-type: none">▶ customizable for individual project requirements▶ intermediate tube removable without disturbing adjacent equipment▶ integral safety catch in case of disc pack rupture▶ customer specified DBSE available	Page 131

DESIGN

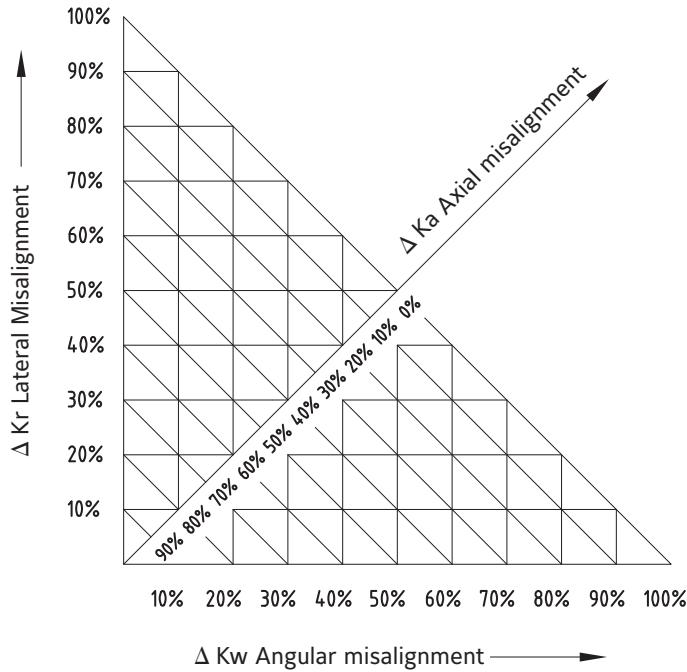

DISC PACK COUPLINGS

R+W disc pack couplings transmit torque across the disc pack assemblies purely by friction, thus avoiding stress concentration, backlash, and micro-movements resulting from transmitting torque across the shoulder bolts. This aids in approaching infinite life in addition to making the complete coupling assembly more torsionally stiff.

R+W disc pack couplings are shipped as individual components. Assembly is required.

MISALIGNMENT COMPENSATION

These couplings compensate for varying combinations of shaft misalignment types as percentages of the total allowable misalignment values listed in the data tables. The total sum of the three misalignment percentages must not exceed 100%.

Example: pump skid

axial misalignment: 20%
lateral misalignment: 40%
angular misalignment: 40%

$$\Delta K_{total} = \Delta K_r + \Delta K_w + \Delta K_a \leq 100\%$$

$$\Delta K_{total} = 20\% + 40\% + 40\% \leq 100\%$$

► coupling is fatigue resistant

LP1

WITH KEYWAY MOUNTING

350 - 20,000 Nm

ABOUT

FEATURES

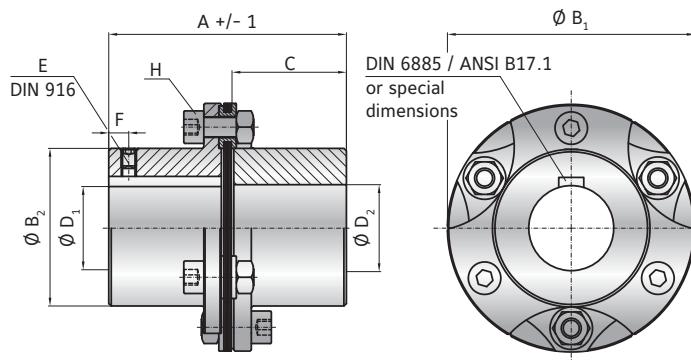

- very high torsional stiffness
- single flex design
- wear and maintenance free

MATERIAL

- **Disc pack:** highly elastic spring steel
- **Hubs:** high strength steel

DESIGN

Two precision machined coupling hubs mounted to the disc pack by means of high strength screws and bushings for alignment and frictional clamping of the assembly. Axial retention with DIN 916 set screws.

Bore D1 H7				●		
Bore D2 H7					●	
For custom features place an XX at the end of the part number and describe the special requirements (e.g. LP2/700/206/38.1/42/XX; XX=stainless steel hubs and spacer)						

Special designation only
(e.g. special bore tolerance).

LP3

WITH CONICAL CLAMPING RING

350 - 20,000 Nm

ABOUT

FEATURES

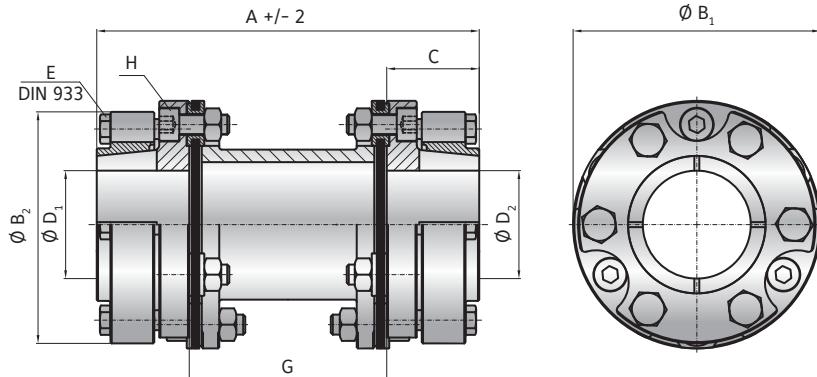

- high torsional stiffness
- high clamping pressure
- backlash free torque transmission
- good for high speed, reversing and intermittent loading

MATERIAL

- **Disc packs:** highly elastic spring steel
- **Hubs and spacer:** high strength steel

DESIGN

Two precision machined conical clamping ring hubs and precision spacer tube mounted to the disc packs by means of high strength screws and bushings for alignment and frictional clamping of the assembly.

MODELL LP3

SERIE	300	700	2000	4000	7000	10000
Rated torque (Nm)	T _{KN}	350	700	2000	4500	7600

FOR API 610 REQUIREMENTS

350 - 20,000 Nm

ABOUT

FEATURES

- meets all requirements of API 610
- intermediate tube removable without disturbing adjacent equipment
- integral safety catch in case of disc pack rupture
- ISO G6.3 / AGMA class 9 minimum balance quality
- highly customizable

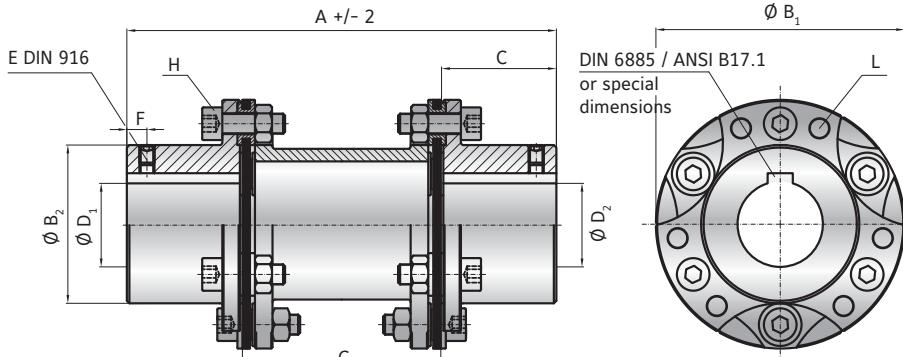

MATERIAL

- **Disc packs:** highly elastic, corrosion resistant spring steel

- **Hubs and spacer:** high strength steel

DESIGN

Two precision machined coupling hubs and precision spacer tube mounted to the disc packs by means of high strength screws and bushings for alignment and frictional clamping of the assembly. Axial retention with DIN 916 set screws.

ATEX

FOR USE IN HAZARDOUS AREAS

ATEX CERTIFIED
COUPLINGS

ATEX

FOR USE IN HAZARDOUS AREAS

PRECISION COUPLINGS

MARKING EXAMPLE

Based on the ATEX markings the product can be certified for suitability under certain conditions.

	II	2G	c	IIA T6	X
	II	2D	c	85°C	X
	Equipment group	Category	Protection type	Explosion group / temperature class / maximum surface temperature	Additional features

Equipment group	Approval type
I	approved for underground operation
II	approved for all other applications

Category	Approved for zone	Zone description
1G	0	Area in which an explosive atmosphere consisting of a mixture of air and flammable gases, vapors, or mists, is present continuously, frequently, or for long periods of time.
2G	1	Area in which the potential exists for an explosive mixture of air and flammable gases, vapors, or mists to occur.
3G	2	Area in which the potential for an explosive mixture of air and flammable gases, vapors, or mists to occur is unlikely and only for a brief duration.
1D	20	Area with the same conditions as zone 0, with powder or dust.
2D	21	Area with the same conditions as zone 1, with powder or dust.
3D	22	Area with the same conditions as zone 2, with powder or dust.

Protection type	Definition
c	Design safety level: ignition hazard is avoided by the product design.

Example classification by occurring gases, mists and vapors according to temperature class and explosion group

Explosion group / temperature class / maximum surface temperature	IIA	IIB (includes IIA)	IIC (includes IIA + IIB)
T1 / 450°C	acetone, ammonia, methane...	natural gas	hydrogen
T2 / 300°C	ethyl alcohol, butane, cyclohexane...	ethylene, ethylene oxide	ethyne (acetylene)
T3 / 200°C	gasoline, diesel fuel, fuel oil...	ethylene glycol, hydrogen sulfide	
T4 / 135°C	acetaldehyde	ethyl ether	
T5 / 100°C			
T6 / 85°C			carbon disulphide

Additional labeling	Definition
X	Special operating conditions
U	Product is only a component in a machine. Conformity therefore shall only be declared after installation.

ATEX BELLOWS COUPLINGS

CONSTRUCTION

Dimensions and materials of the standard models remain largely intact.

PERFORMANCE RATINGS

All permitted misalignment, speed, and torque ratings of the standard models must be reduced by 30%.

OPERATION

ATEX metal bellows couplings must only be operated inside a sealed housing. Both the input and output shafts must be monitored to guarantee shut down in the case of coupling failure.

With blind mate style bellows couplings it is also necessary to guarantee electrical continuity between both shafts. This is necessary due to the electrically isolating properties of the coupling, and the need to prevent sparking from any electrostatic charges.

SAMPLE IDENTIFICATION

Type: BK2/60/EEx - 2013
II 2G c T4
II 2D c 135°C

Type: BK5/60/EEx - 2013
II 2G c T4
II 2D c 135°C
Ser.No.: 123456.7
Tech.Ref.No.:2003/006RW

ATEX ELASTOMER COUPLINGS

CONSTRUCTION

Dimensions and materials of the standard models remain largely intact.

For ATEX elastomer couplings the inserts come in version "D" (Sh65D) which is electrically conductive to provide continuity for any potential electrostatic charges.

PERFORMANCE RATINGS

All permitted misalignment, speed, and torque ratings of the standard models must be reduced by 30%.

OPERATION

In the case of model TX thermoplastic hub elastomer couplings it is also necessary to guarantee electrical continuity between both shafts. This is necessary due to the electrically isolating properties of the coupling, and the need to prevent sparking from any electrostatic charges.

SAMPLE IDENTIFICATION

Type: EK2/60/EEx - 2013

ATEX

FOR USE IN HAZARDOUS AREAS PRECISION COUPLINGS

ATEX SAFETY COUPLINGS

CONSTRUCTION

Dimensions and materials of the standard models remain largely intact.

Generally full disengagement style safety couplings are used in ATEX environments in order to avoid high temperatures from excess friction after disengagement.

For ES2 safety couplings the inserts come in version "D" (Sh65D) which is electrically conductive to provide continuity for any potential electrostatic charges.

PERFORMANCE RATINGS

All permitted misalignment and speed ratings of the standard models must be reduced by 30%.

OPERATION

ATEX safety couplings must be used with an ATEX proximity switch. The emergency stop function in conjunction with activation of the switch must be fully tested for proper function prior to commissioning of the machine.

When bellows couplings are incorporated they must only be operated inside a sealed housing. Both the input and output shafts must be monitored to guarantee shut down in the case of bellows failure.

With blind mate style bellows couplings it is also necessary to guarantee electrical continuity between both shafts. This is necessary due to the electrically isolating properties of the coupling, and the need to prevent sparking from any electrostatic charges.

SAMPLE IDENTIFICATION

Type: SK2/60/EEx - 2013
II 2G c T3
II 2D c 200°C

Tech.Ref.No.:2003/002RW

ATEX LINE SHAFTS

CONSTRUCTION

Dimensions and materials of the standard models remain largely intact.

For EZ type line shafts the inserts come in version "D" (Sh65D) which is electrically conductive to provide continuity for any potential electrostatic charges.

PERFORMANCE RATINGS

All permitted misalignment, speed, and torque ratings of the standard models must be reduced by 30%.

The allowable operating speed depends on the overall length of the line shaft and is available upon request.

OPERATION

When bellows couplings are incorporated they must only be operated inside a sealed housing. Both the input and output shafts must be monitored to guarantee shut down in the case of bellows failure.

SAMPLE IDENTIFICATION

Type: EZ2/60/D/EEx - 2013

Tech.Ref.No.:2005/007RW

ATEX DISC PACK COUPLINGS

CONSTRUCTION

Dimensions and materials of the standard models remain largely intact.

PERFORMANCE RATINGS

All permitted misalignment, speed, and torque ratings of the standard models must be reduced by 30%.

OPERATION

Both the input and output shafts must be monitored to guarantee shut down in the case of disc pack failure.

SAMPLE IDENTIFICATION

Prior to deviating from any of the previous safety instructions please contact R+W.

The use of devices and components in explosive areas is governed by the European directives 94/9/EC (for manufacturers) and 1992/92/EC (for operators). The presented products are non-electrical equipment of category 2. All necessary documents and certifications are stored in a known location. The conformity of these products with these guidelines is established and may be declared by the manufacturer.

According to Directive 94/9/EC, delivery of an ATEX coupling requires the inclusion of special installation and operating instructions along with the EC declaration of conformity issued by the manufacturer. All necessary values for installation, operation and removal are included.

All statements made about ATEX conforming products are based on our present knowledge and experience. R+W reserves the right to change technical specifications.
