What is a Fiber Optic System?

Considerations for Choosing Fiber Optic Technology

Fiber Optic systems are comprised of a fiber amplifier and optical fibers. The amplifier, or sensor, emits, receives, and converts the light energy into an electrical signal. Individual fiber optic assemblies simply guide light from the amplifier to a sensing location, or from the sensing location back to the amplifier.

Think of an optical fiber as being similar to a garden hose: like a hose transports water, the fiber transports light from one end to the other.

The main advantage of fiber optic sensors is the versatility. Fibers are typically used because of space constraints, hostile environments, or lack of power at the sensing location. Since the fiber amplifier is a separate piece, it can be mounted and powered remotely.

Banner Engineering has the largest portfolio of fiber optic assemblies in the Industry. We have over 1,000 different fibers to meet every space, environment and sensing requirement.

Typical Applications for Fiber Optics

- Punch presses
- Vibratory feeders
- Conveyors
- Pill counting
- Small object detection
- Leading edge detection
- Ovens
- Semiconductor processing equipment
- Robotic arms and moving machines
- Edge guiding
- Hazardous locations
- Final inspection stations

Why Fiber Optics?

Compact Size for Tight Sensing Locations

- The small size and flexibility allow positioning and mounting in tight spaces
- Plastic fiber optic assemblies are usually single strands of optical fiber and can be routed into extremely tight areas
- Plastic fibers also survive well under repeated flexing
- Pre-coiled plastic fiber optics are available for sensing applications on reciprocating mechanisms

Reliable Performance in Harsh or Explosive Environments

- Fibers can be constructed to survive in areas with corrosive material or extreme moisture and are immune to electrical noise
- Fiber optics contain no electrical circuitry and have no moving parts, so they can safely “pipe” light into and out of hazardous sensing locations
- Most glass fiber optic assemblies are very rugged and perform reliably in extreme temperatures
- Sheathing materials such as polypropylene, Teflon®, and stainless steel are used to shield both plastic and glass fiber optic assemblies in harsh environments
- Optical fibers are low in mass, enabling fiber optic assemblies to withstand high levels of vibration and mechanical shock

Flexibility to Meet a Wide Variety of Application Requirements

- Some fiber optics have bendable probes that can be optimally shaped to the physical and optical requirements of a specific application
- Specialty fibers are available for water detection, clear object detection, or for vacuum feed-through areas

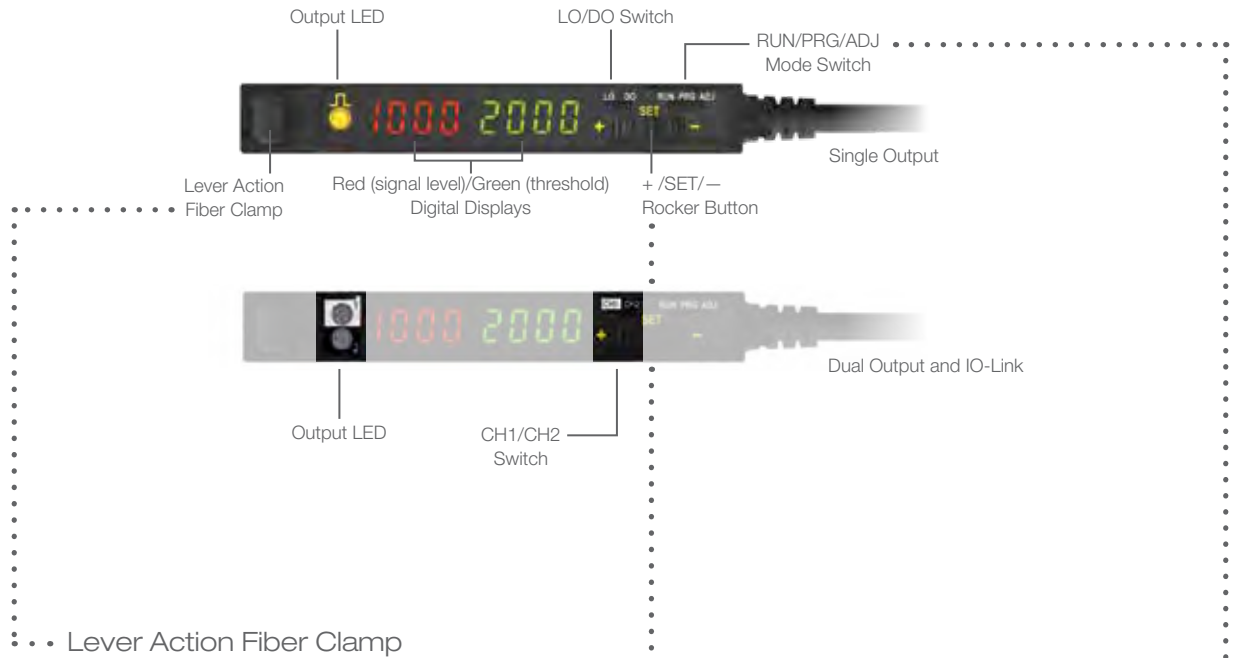

Overview of DF-G Series Amplifiers

- The DF-G Series is an easy-to-use DIN-rail-mountable fiber optic sensor.
- It provides high-performance sensing in low-contrast applications.
- The sensor's compact housing has dual digital displays (Red/Green) and a bright output LED for easy programming and status monitoring during operation.
- Specifications are available on page 15 or on www.bannerengineering.com

	DF-G1	DF-G2	DF-G3
Outputs	 Discrete	 Discrete	 Discrete and Analog
LED Colors			
IO-Link	 IO-Link®	 IO-Link®	 IO-Link®
Light Intensity Receiver			
Small Object Counting			
Extremely Fast Response Speed			
High Power			
Water Detection			

Simple user interface. Highly visible dual display. Easy sensor set up.

- Push lever downward to open
- Upward to close

User Interface

- Light Operate and Dark Operate Slide Switch is easy to see and change the selection
- Run, Program and Adjust Mode Switch
 - RUN locks out changes
 - PROGRAM (PRG) allows for full sensor configuration
 - ADJUST (ADJ) enables threshold adjust and teaching

Rocker Button

- Three position Jog Switch
 - Rocker Switch (+) and (-) precisely adjusts thresholds and easily navigate menus
 - Press to click initiates Teach and SETs, and allow selection of displayed menu

General Purpose Amplifiers

DF-G1: Single Discrete Output

Sensing Beam Color	Connection	Range	NPN Model	PNP Model
Visible red	2 m	Range varies by response speed used, gain setting, target light source intensity, ambient light level and with fiber optics used.	DF-G1-NS-2M	DF-G1-PS-2M
	9 m		DF-G1-NS-9M	DF-G1-PS-9M
	150 mm (6 in) PVC pigtail, M8 Pico connector, 4-pin		DF-G1-NS-Q3	DF-G1-PS-Q3
	150 mm (6 in) PVC pigtail, M12 Euro QD connector, 4-pin		DF-G1-NS-Q5	DF-G1-PS-Q5
	Integral M8 Pico, 4-pin		DF-G1-NS-Q7	DF-G1-PS-Q7

DF-G2: High-Speed Single Discrete Output

Sensing Beam Color	Connection	Range	NPN Model	PNP Model
Visible red	2 m	Range varies by response speed used, gain setting, target light source intensity, ambient light level and with fiber optics used.	DF-G2-NS-2M	DF-G2-PS-2M
	9 m		DF-G2-NS-9M	DF-G2-PS-9M
	150 mm (6 in) PVC pigtail, M8 Pico connector, 4-pin		DF-G2-NS-Q3	DF-G2-PS-Q3
	150 mm (6 in) PVC pigtail, M12 Euro QD connector, 4-pin		DF-G2-NS-Q5	DF-G2-PS-Q5
	Integral M8 Pico, 4-pin		DF-G2-NS-Q7	DF-G2-PS-Q7

DF-G3: High-Power Single Discrete Output

Sensing Beam Color	Connection	Range	NPN Model	PNP Model
Visible red	2 m	Range varies by response speed used, gain setting, target light source intensity, ambient light level and with fiber optics used.	DF-G3-NS-2M	DF-G3-PS-2M
	9 m		DF-G3-NS-9M	DF-G3-PS-9M
	150 mm (6 in) PVC pigtail, M8 Pico connector, 4-pin		DF-G3-NS-Q3	DF-G3-PS-Q3
	150 mm (6 in) PVC pigtail, M12 Euro QD connector, 4-pin		DF-G3-NS-Q5	DF-G3-PS-Q5
	Integral M8 Pico, 4-pin		DF-G3-NS-Q7	DF-G3-PS-Q7

A model with a QD connector requires a mating cordset

DF-G3: High-Power Dual Independent Discrete Outputs

Sensing Beam Color	Connection	Range	NPN Model	PNP Model
Visible red	2 m	Range varies by response speed used, gain setting, target light source intensity, ambient light level and with fiber optics used.	DF-G3-ND-2M	DF-G3-PD-2M
	9 m		DF-G3-ND-9M	DF-G3-PD-9M
	150 mm (6 in) PVC pigtail, M8 Pico connector, 5-pin		DF-G3-ND-Q3	DF-G3-PD-Q3
	150 mm (6 in) PVC pigtail, M12 Euro QD connector, 5-pin		DF-G3-ND-Q5	DF-G3-PD-Q5
	Integral M8 Pico, 5-pin		DF-G3-ND-Q7	DF-G3-PD-Q7

DF-G3: High-Power One Analog and One Discrete Output

Sensing Beam Color	Connection	Analog Output	Range	NPN Model	PNP Model
Visible red	2 m	Voltage: 0-10 V DC	Range varies by response speed used, gain setting, target light source intensity, ambient light level and with fiber optics used.	DF-G3-NU-2M	DF-G3-PU-2M
	9 m	Voltage: 0-10 V DC		DF-G3-NU-9M	DF-G3-PU-9M
	150 mm (6 in) PVC pigtail, M8 Pico, 5-pin	Voltage: 0-10 V DC		DF-G3-NU-Q3	DF-G3-PU-Q3
	150 mm (6 in) PVC pigtail, M12 Euro, 5-pin	Voltage: 0-10 V DC		DF-G3-NU-Q5	DF-G3-PU-Q5
	Integral M8 Pico, 6-pin	Voltage: 0-10 V DC		DF-G3-NU-Q7	DF-G3-PU-Q7
Visible red	2 m	Current: 4-20 mA	Range varies by response speed used, gain setting, target light source intensity, ambient light level and with fiber optics used.	DF-G3-NI-2M	DF-G3-PI-2M
	9 m	Current: 4-20 mA		DF-G3-NI-9M	DF-G3-PI-9M
	150 mm (6 in) PVC pigtail, M8 Pico, 5-pin	Current: 4-20 mA		DF-G3-NI-Q3	DF-G3-PI-Q3
	150 mm (6 in) PVC pigtail, M12 Euro QD, 5-pin	Current: 4-20 mA		DF-G3-NI-Q5	DF-G3-PI-Q5
	Integral M8 Pico, 6-pin	Current: 4-20 mA		DF-G3-NI-Q7	DF-G3-PI-Q7

Application Specific Amplifiers

DF-G1 Light Intensity Receiver

Connection*	Range	NPN Models	PNP Models
2 m	Range varies by response speed used, gain setting, target light source intensity, ambient light level and with fiber optics used.	DF-G1-NR-2M	DF-G1-PR-2M

DF-G2 Small Object Counter

Connection*	Sensing Beam Color	Window Size	NPN Models	PNP Models**
2 m	Visible red	Determined by the fiber optic assembly	DF-G2-NC-2M	DF-G2-PC-2M

See page 20 for a sample of array fibers

DF-G2 Color LED

Connection*	Sensing Beam Color	Range	NPN Models	PNP Models
2 m	Infrared†	190% of Visible Red Range	DF-G2IR-NS-2M	DF-G2IR-PS-2M
2 m	Broad spectrum white	50% of Visible Red Range	DF-G2W-NS-2M	DF-G2W-PS-2M
2 m	Visible green	60% of Visible Red Range	DF-G2G-NS-2M	DF-G2G-PS-2M
2 m	Visible blue	70% of Visible Red Range	DF-G2B-NS-2M	DF-G2B-PS-2M

DF-G3 Water Detection

Connection*	Sensing Beam Color	Range††	Output	NPN Models	PNP Models
2 m	Long infrared (1450 nm)†	900 mm	Voltage: 0-10 V DC, Discrete	DF-G3LIR-NU-2M	DF-G3LIR-PU-2M
2 m	Long infrared (1450 nm)†	900 mm	Current: 4-20 mA, Discrete	DF-G3LIR-NI-2M	DF-G3LIR-PI-2M
2 m	Long infrared (1450 nm)†	900 mm	Single Discrete	DF-G3LIR-NS-2M	DF-G3LIR-PS-2M
2 m	Long infrared (1450 nm)†	900 mm	Dual Discrete	DF-G3LIR-ND-2M	DF-G3LIR-PD-2M

A model with a QD connector requires a mating cordset

* Connector options:

- For 9 m cable, change the suffix **2M** to **9M** in the 2 m model number (example, **DF-G3LIR-NU-9M**)
- For 150 mm (6 in) PVC, M8 Pico QD connector, 4-pin change the suffix **2M** to **Q3** in the 2 m model number (example, **DF-G3LIR-NU-Q3**)
- For 150 mm (6 in) PVC, M12 Euro QD connector, 4-pin change the suffix **2M** to **Q5** in the 2 m model number (example, **DF-G3LIR-NU-Q5**)
- For integral M8 Pico QD connector, 4-pin change the suffix **2M** to **Q7** in the 2 m model number (example, **DF-G3LIR-NU-Q7**)

** Includes Health Mode Output

† Excess gain = 1, Long Range response speed, opposed mode sensing. PIT46U plastic fiber used for visible LED models, IT.83.3ST5M6 glass fiber used for IR model

†† IR models require T5 terminated glass fiber optic cables

DF-G Fiber Amplifiers with IO-Link

The DF-G Series has a simple user interface to ensure easy sensor set-up and programming via displays and switches/buttons, remote input teach wire or IO-Link.

DF-G1

Connection*	Sensing Beam Color	Range	Output	Model*
150 mm (6 in) PVC pigtail, M12 Euro, 5-pin	Visible red	Range varies by Speed Selection used and with fiber optics used	Dual complementary outputs: - 1 push-pull (IO-Link) - 1 PNP	DF-G1-KS-Q5

DF-G2

Connection*	Sensing Beam Color	Range**	Channel 1 Output	Channel 2 Output	Model*
150 mm (6 in) PVC pigtail, M12 Euro, 5-pin	Visible red	1100 mm	IO-Link, push/pull	PNP only, or input	DF-G2-KD-Q5
150 mm (6 in) PVC pigtail, M12 Euro, 5-pin	Infrared†	2100 mm	IO-Link, push/pull	PNP only, or input	DF-G2IR-KD-Q5

DF-G3

Connection*	Sensing Beam Color	Range**	Channel 1 Output	Channel 2 Output	Model*
150 mm (6 in) PVC pigtail, M12 Euro, 5-pin	Visible red	3000 mm	IO-Link, push/pull	PNP only, or input	DF-G3-KD-Q5
150 mm (6 in) PVC pigtail, M12 Euro, 5-pin	Infrared†	6000 mm	IO-Link, push/pull	PNP only, or input	DF-G3IR-KD-Q5

A model with a QD connector requires a mating cordset

* Connector options:

- For 2 m cable, change the suffix **Q5** to **2M** in the **Q5** model number (example, **DF-G3-KD-9M**)
- For 9 m cable, change the suffix **Q5** to **9M** in the **Q5** model number (example, **DF-G3-KD-9M**)
- For 150 mm (6 in) PVC, M8 Pico QD connector, 4-pin change the suffix **Q5** to **Q3** in the **Q5** model number (example, **DF-G3-KD-Q3**)
- For integral M8 Pico QD connector, 4-pin change the suffix **Q5** to **Q7** in the **Q5** model number (example, **DF-G3-KD-Q7**)

** Excess gain = 1, Long Range response speed, opposed mode sensing. **PIT46U** plastic fiber used for visible LED models, **IT.83.3ST5M6** glass fiber used for IR model

† IR models require T5 terminated glass fiber optic cables

Fiber Optic Applications

Web Monitoring/Splice Detection

Challenge

- Material texture, color, or finish vary
- Dusty environment
- Easy setup

Key Features

- Variety of opposed mode fiber arrays for edge guiding
- High excess gain with auto thresholding
- Option for mid-point teach mode

Featured Solution

Amplifier: DF-G2-PS-2M

Fiber: PIT43TSL5-VL

Key Benefits

- Opposed mode fiber arrays minimize effects of changing textures, colors, or transparencies
- Able to burn through dust and compensate for dust that settles on fibers
- Mid-point teach learns the optimal web position with an easy single-point teach

Liquid Level Detection

Challenge

- Detect liquid level in transparent or different color vials and bottles
- Limited space to mount a sensor

Key Features

- Detect water-based liquids inside translucent or opaque plastic and glass containers
- Compatible with standard glass fibers with T5 termination

Featured Solution

Amplifier: DF-G3LIR-PS-2M

(Water Detection Sensor)

Fiber: IT43ST5-VL (pair)

Key Benefits

- Reduce product waste by detecting under-filled vials early in the packaging process
- Quick and simple installation with many small fiber optic bundle styles to choose from

Light Intensity Detection

Challenge

- Verify correct assembly and function of automotive indicator lights

Key Features

- Designed to detect light emission from a wide variety of sources - 410 nm to near infrared

Featured Solution

Amplifier: DF-G1-PR-Q5

Fiber: PIT46U-VL

Key Benefits

- Quality improvement and return reduction
- Quick and simple installation with many small fiber optic bundle styles to choose from

Related Applications

- Appliance lighting
- LED indicators on equipment
- Window tint verification
- Dashboard lighting verification

High-Speed Small Object Detection

Challenge

- Tablets move at high speed
- Small tablets are hard to detect

Featured Solution

Amplifier: DF-G2-PC-2M (small object counter)
Fiber: PFCVA-10X25-E

Key Features

- Automatic Gain Compensation (AGC) algorithm compensates for dust build-up on fiber optics
- Fiber optic array can detect objects as small as 2 mm in diameter

Key Benefits

- Increase the time between scheduled maintenance by extending the counting cycle and maintain count accuracy as dust increases during production
- Improve process flexibility by detecting even the smallest tablet in a large 40 mm area

Blue LEDs for Low Contrast Detection

Challenge

- Detecting presence and correct clips used in a door panel assembly

Featured Solution

Amplifier: DF-G2B-PS-Q5 (Blue LED)
Fiber: PBL46U

Key Features

- Blue LED optimal for detecting silver and gold clips in place
- Can easily differentiate and verify correct color clip used since gold clips reflect less blue light than silver

Key Benefits

- Highly reliable and cost-effective solution to reduce errors and rejects
- Diffuse lensed fibers provide small, bright spot

Green LEDs for Registration Mark Detection

Challenge

- Accurately detect red registration mark on roll of packaging
- Product passes at high speed

Featured Solution

Amplifier: DF-G2G-PS-2M
Fiber: PBT23U-VL

Key Features

- 10 μ s response time

Key Benefits

- Green LED creates optimal contrast with red registration mark

High Temperature – Leading Edge Detection

Challenge

- Temperature is above the limit for most plastic fibers

Featured Solution

Amplifier: DF-G1-PS-Q3

Fiber: One pair of IT46ST5-VL

Key Features

- Glass fiber assemblies are suitable for high temp applications up to 249° C
- Stainless steel sheathing protects cable jacket from abrasion and high temperature

Key Benefits

- Thermal process applications
- For sensing near manufacturing ovens
- Manufacturing of solar panels, colored glass and ceramics
- Widest selection of plastic and glass fibers for high temp applications

Long-Range Detection in a Hazardous/Dirty Area

Challenge

- Detecting correct product placement in harsh environment, fibers get coated in oil and dirt
- Cables can be abraded or cut

Featured Solution

Amplifier: DF-G3-PS-Q5

Fiber: PIT46TMB5

Key Features

- With extended range of DF-G3 amplifier, fibers can be placed much farther away and still reliably detect correct positioning

Key Benefits

- No build-up of dirt and oil on fiber amplifier because it is out of the area
- STEEL SKIN fibers offer protection to the cabling

Fill Level Detection – Water Bottles

Challenge

- Difficult to consistently detect the top edge of clear water in a variety of bottles

Featured Solution

Amplifier: Two DF-G3LIR-PS-2M

Fiber: Two pairs of IT43ST5-VL with L2 Lens

Key Features

- Banner's DF-G3LIR water sensor employs a unique LED that can clearly detect water-based liquids

Key Benefits

- Regardless of the bottle color or texture, the DF-G3LIR water sensors will see the clear water-based liquids inside

Precise Positioning

Challenge

- Detect leading edge of board to trigger adhesive application
- Then verify that adhesive was applied properly to trays of IC chips

Key Features

- Fast response speed
- Small spot size

Featured Solution

Amplifier: Two DF-G3-PD-2M

Fiber: Two PBT23UM4-VL Diffuse Reflective

Key Benefits

- Accurate leading edge detection
- Prevents product waste by assuring glue was applied

Edge Guiding

Challenge

- Incorrect winding causes major issues with assembly and increased downtime to fix the film

Key Features

- Compact fibers can sense very slight changes in position

Featured Solution

Amplifier: DF-G3-PU-Q5

Fiber: PGIRS66U-100

Key Benefits

- The DF-G3 fiber optic amplifier used with plastic array fibers detects the edges of the film and guides it into proper position

Detecting Presence of Clear Photomask – Semiconductor Manufacturing

Challenge

- Clear object in a confined space

Key Features

- Convergent Beam Fiber can detect glass regardless of color or transparency
- Form factor (right angle) of fiber fits in a confined space
- 6 mm focus point with tight depth of field

Featured Solution

Amplifier: DF-G1-PS-Q7

Fiber: P32-C6

Key Benefits

- Solution is extremely robust based on optical contrast

Fiber Amplifier Accessories

SA-DIN-BRACKET
to mount DF-G without DIN rail

SA-DIN-CLAMP
end clamps for DIN rail

DIN-35-70: 70 mm

Fiber Optics

What Are Fiber Optics?

Fiber optics are used to transmit light energy over long distances. Optical fibers are thin, transparent strands of optical quality glass or plastic that can be as thin as a strand of hair. In photoelectric sensing, these fibers are used to transmit and/or receive light from the LED of a sensor.

Plastic Fiber Optic Assemblies

Plastic fiber optics usually have a large, monofilament core which comes in a single strand of fiber optic.

Advances in LED technology have improved the performance and range of plastic fiber optic sensing systems to the point that they are nearly equivalent to glass fibers. Plastic fibers are a versatile, cost-effective choice for many fiber optic sensing applications.

Advantages:

- Less expensive
- Allow less signal attenuation
- More flexible
- Survive well under repeated flexing
- Can be cut to length in the field
- Can be routed into extremely tight areas

Glass Fiber Optic Assemblies

Most glass fiber optic assemblies are very rugged and perform reliably in extreme temperatures, corrosive or vacuum chamber environments. Glass fiber optic assemblies can transmit both visible and infrared light, where plastic fiber optics can only transmit visible light. A common problem experienced with glass fibers is breakage of the individual strands resulting from sharp bending or continued flexing, as occurs on reciprocating mechanisms. Banner glass fibers with a T5 connection are compatible with DF-G plastic amplifiers.

Advantages

- Powerful and very rugged
- Can carry infrared light to provide longer range
- Reliable in extreme temperatures and harsh environments

A full line of glass fibers and compatible amplifiers are available on www.bannerengineering.com

Vantage Line

See page 18

Problem solving fibers that solve a majority of common applications. Most models feature a PVC overmolded flex relief.

Array & Slot

See page 20

Array fibers are ideal for small part counting and detecting objects at any point in the sensing area. Slot fibers are ideal for web guiding and edge detection.

Heavy Duty

See page 22

Heavy duty fiber models resist kinking, cutting and abrasion and are ideal for places where the fibers are exposed to repeated stress.

Tight Bend

See page 24

Able to be bent to a tight radius for limited space set-ups and difficult-to-access locations.

Retractable

See page 25

Designed for linear motion applications where the fiber is repeatedly moved back and forth. The cable is coiled and can offer a full range of movement without a tangle of loose cable.

Liquid Level

See page 26

Easily detect liquids with tube mounted fiber assemblies, special wavelength infrared light, or liquid probes.

High Temperature

See page 27

Glass fibers specially terminated for use in the DF-G Fiber Amplifiers. Can withstand temperatures up to 315 °C – much higher than plastic fibers. For thermal process applications, areas near ovens or high heat.

Accessories

See page 28

Screw on lenses to focus the light beam are available for a variety of fibers. Also available are special brackets for mounting and fiber cutters to custom fit fiber cables to the application.

Vantage Line Fibers

- OEM friendly packaging
- Opposed models come as a pair
- No fiber cutter included

Opposed Fibers

Fiber Head	Description	Minimum Bend Radius	Typical Range* (mm)	Fiber Length	Model
