PLC Automation

PLCs, Control Panels, Engineering Suite

3ADR020077C0204 REV B - Edition December 2018

PLC Automation product family
Overview

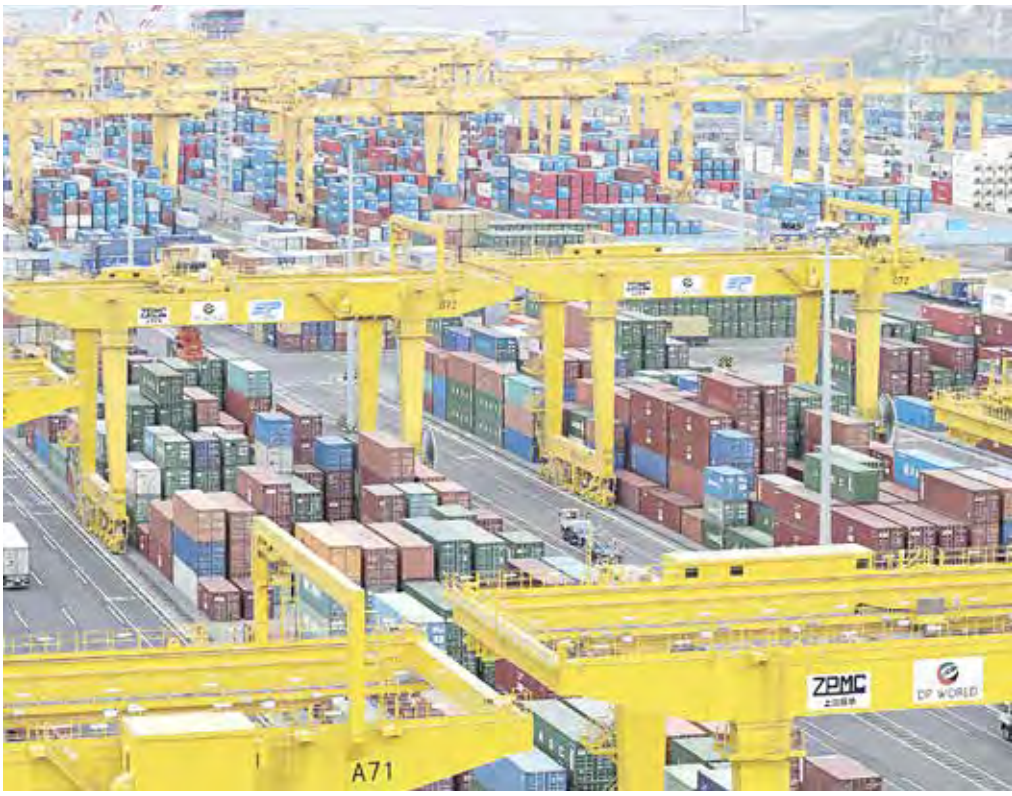
ABB offers a comprehensive range of scalable PLCs and robust HMI control panels. Since its launch, the AC500 PLC platform has achieved significant industry recognition for delivering high performance, quality and reliability.

Comprehensive range
- ABB delivers scalable, flexible and efficient ranges of automation components to fulfill all conceivable requirements of the most diverse automation applications.
- ABB's automation devices deliver solutions with high performance and flexibility to be effectively deployed within various industries and applications including water, building infrastructure, data centers, renewable energy, machinery automation, material handling, marine and many more.

Engineering suite
- ABB Automation Builder is the integrated software suite for machine builders and system integrators requiring state-of-the-art productive machine and system automation.
- Combining the tools required for configuring, programming, debugging and maintaining automation projects from one common intuitive interface, Automation Builder addresses the largest single cost element of most of today's industrial automation projects - software.

Programmable Logic Controllers PLCs
- The AC500-eCo, AC500, AC500-XC and AC500-S scalable PLC ranges provide solutions for small, medium and high-end applications.
- Our AC500 PLC platform offers different performance levels and is the ideal choice for high availability, extreme environments, condition monitoring, motion control or safety solutions.
- Our AC500 PLC platform offers interoperability and compatibility in hardware and software from compact PLCs up to high end and safety PLCs.

Control panels
- CP600-eCo, CP600 and CP600-Pro control panels offer a wide range of features and functionalities for maximum operability.
- ABB control panels are distinguished by their robustness and easy usability, providing all the relevant information from production plants and machines at one single touch.



PLC Automation product family
Overview

Engineering suite

Automation Builder

- Automation Builder connects the engineering tools for PLC, safety, control panels, SCADA, drives and motion.
- Automation Builder combines the tools required for configuring, programming, debugging and maintaining automation projects from one common intuitive interface.

Library packages

- For efficient engineering of demanding applications.
- Easy-to-use application examples.

Visualization

CP600-eCo

- The economical CP600-eCo control panel is aimed for standard functions and high usability for clear interaction with the operation process.

Programmable Logic Controllers PLCs

AC500-eCo

- Compact PLC offering optimally suited flexible and economical configurations for automation solutions in smaller applications.
- ABB's AC500-eCo has been designed to integrate seamlessly into the broader AC500 PLC platform.

I/O modules

S500-eCo

- Range of modular I/Os for economical configurations in smaller applications.
- The I/O modules can be connected directly to the AC500 or AC500-eCo CPU modules.
- S500-eCo I/O modules can be mixed with standard S500 modules and also used as remote I/O with fieldbus communication interface modules.

CP600

- The robust CP600 HMI provides high visualization performance, versatile communication and representative design for machines and systems.

CP600-Pro

- The CP600-Pro HMI portfolio comes with high end visualization performance, multi-touch operation, versatile trendsetting communication and representative design.

AC500

- Powerful PLC featuring a wide range of performance, communications and I/O capabilities for industrial applications.
- The ideal choice for complex, high-speed machinery and networking solutions.

AC500-XC

- Extreme condition PLC variant of the AC500 platform.
- With extended operating temperature, immunity to vibration and hazardous gases, use at high altitudes and in humid environments.

AC500-S

- Integrated safety PLC (SIL3, PL e) designed for safety applications involved in factory, machinery or process automation area.
- For simple and complex safety solutions.

S500

- Modular I/O assortment with protected outputs and comprehensive diagnosis, covering a wide range of signal types.
- The I/O modules can be installed as remote I/O with a communication interface module or be directly connected to the AC500 CPU.
- Support of different fieldbuses makes it possible to use the S500 I/O modules with PLCs from different manufacturers.

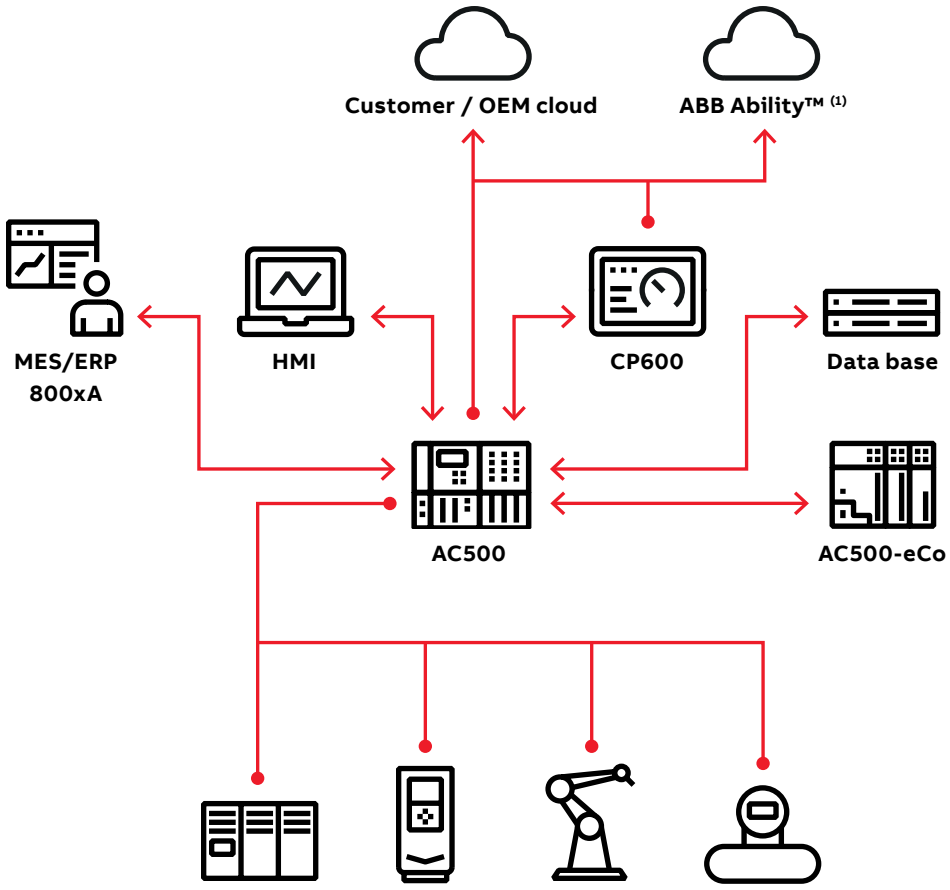
S500-XC

- Extreme condition variant of the S500 I/O system.
- With extended operating temperature, immunity to vibration and hazardous gases, use at high altitudes and in humid environments.

S500-S

- Safety variant of the S500 I/O system.
- Extreme condition variants available.

PLC Automation product family
Connectivity



(1) In preparation

IT network / internet
- MQTT
- OPC UA
- HTTP(S)
- FTP(S)
- SNTP

Factory/site network
- OPC DA/AE
- OPC UA
- UDP
- TCP/IP
- KNX
- BACnet
- MySQL / MSSQL
- HTTP(S)
- FTP(S)
- SNTP
- SNMP

Control network
- PROFINET
- EtherCAT
- Modbus TCP
- Modbus RTU
- Profibus DP
- IEC 60870-5-104
- IEC 61850
- CANopen

Protocol	Application example
OPC UA	SCADA and cloud connectivity: Give access to selected AC500 variables and objects
MQTT	Certificated based publishing of data to private clouds for dashboards or data analytics
HTTP(S)	Publish HTML5 websites for monitoring and control
HTTP Request	Request information like temperature, humidity etc. from devices with web server functionality
Connector to SQL Database	Save to or get data from MSSQL or MySQL databases
SNMP Agent	Send traps (up to 4096 process alarms per PLC) to a SNMP management tool
SNMP Manager	Act as a SNMP Manager with Set and Get commands
BACnet	Give access to selected AC500 variables and objects
UDP and TCP/IP	Implement specific and efficient own communications
FTP(S)	Server and client for secure and efficient exchange of big data

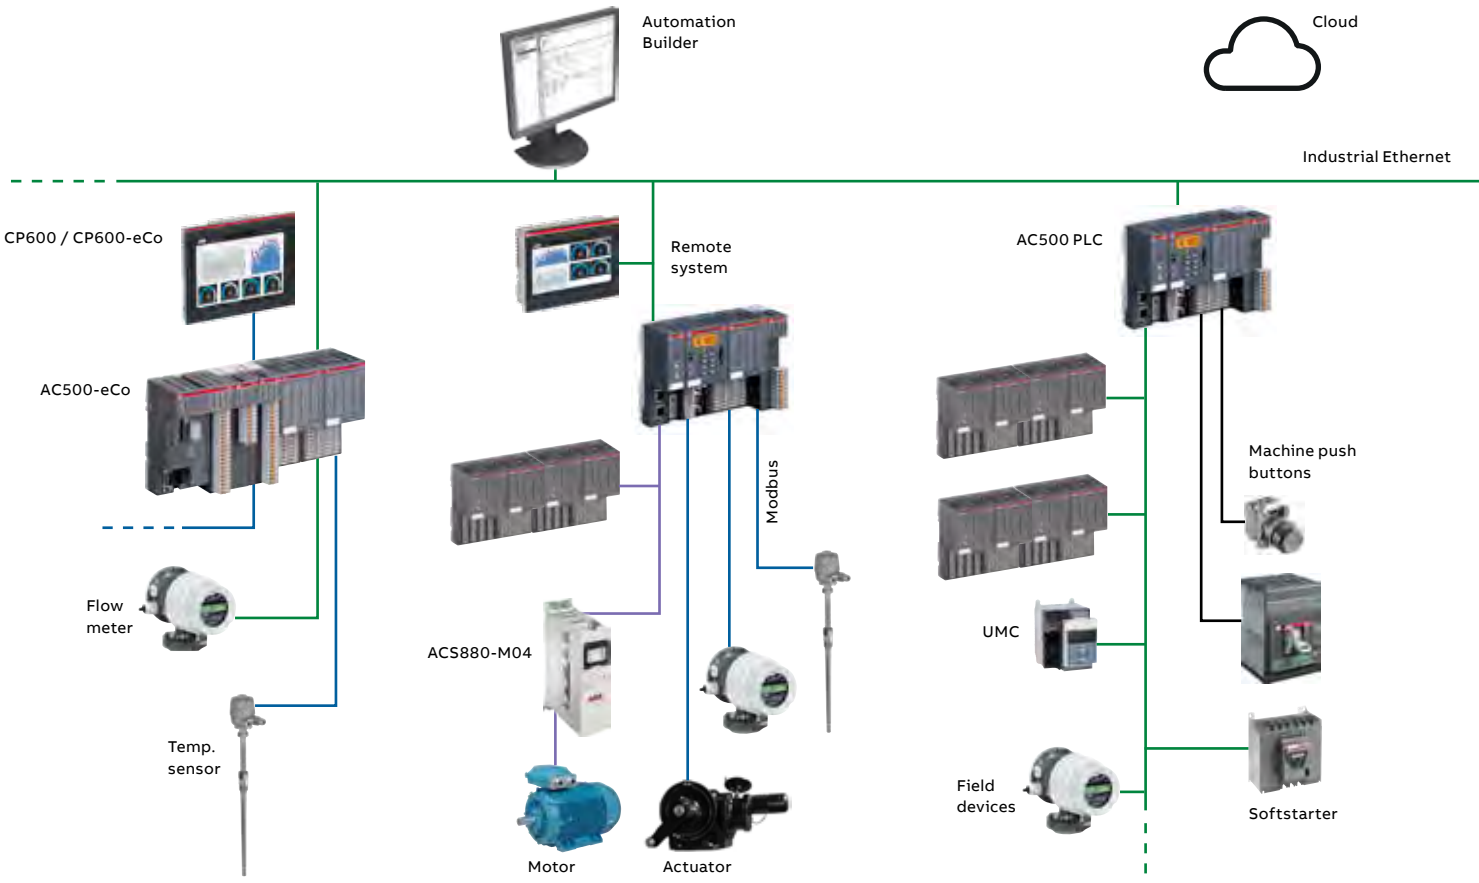
PLC Automation product family
Network architecture

Communication with AC500 – the perfect solution
Flexibility, real-time capability and maximum data transfer speed are just some of the communication demands automation systems must meet. With AC500, ABB has developed a communication platform offering customer-oriented solutions for the most diverse communication tasks. Simple network configuration and diagnostics options using Automation Builder enable ease of planning, implementation and commissioning thus saving engineering time and project costs. Among others, ABB's AC500 supports the following communication protocols:

PROFIBUS DP
PROFIBUS DP provides flexible configuration by means of a mono- and multi-master system structure and data transfer rates of up to 12 Mbit/s with twisted pair cables and/or optical fibers. PROFIBUS DP allows for the connection of up to 126 devices (master/slave) to one bus segment thus enabling simple and reliable communication solutions.

PROFINET
PROFINET I/O meets the stringent requirements for real time Ethernet protocols in the world of automation. Very fast data transfer, integrated and standardized network structures from controller to field and flexible network management support users in the implementation of their automation solutions.

CANopen
With up to 127 connected devices and transmission speeds of 10 kbit/s up to 1 Mbit/s depending on bus length, CANopen offers high-speed data transfer and high immunity in master/slave network topologies.



CS31-Bus and RCOM
CS31-Bus is a high-performance, proprietary ABB communication standard featuring data transfer speeds of up to 187.5 kbit/s and enabling up to 31 network nodes to communicate via RS485, simple telephone cable or optical fiber. RCOM is a proprietary ABB bus protocol for master/slave communication via RS232/485. Expandable to 254 RCOM slaves.

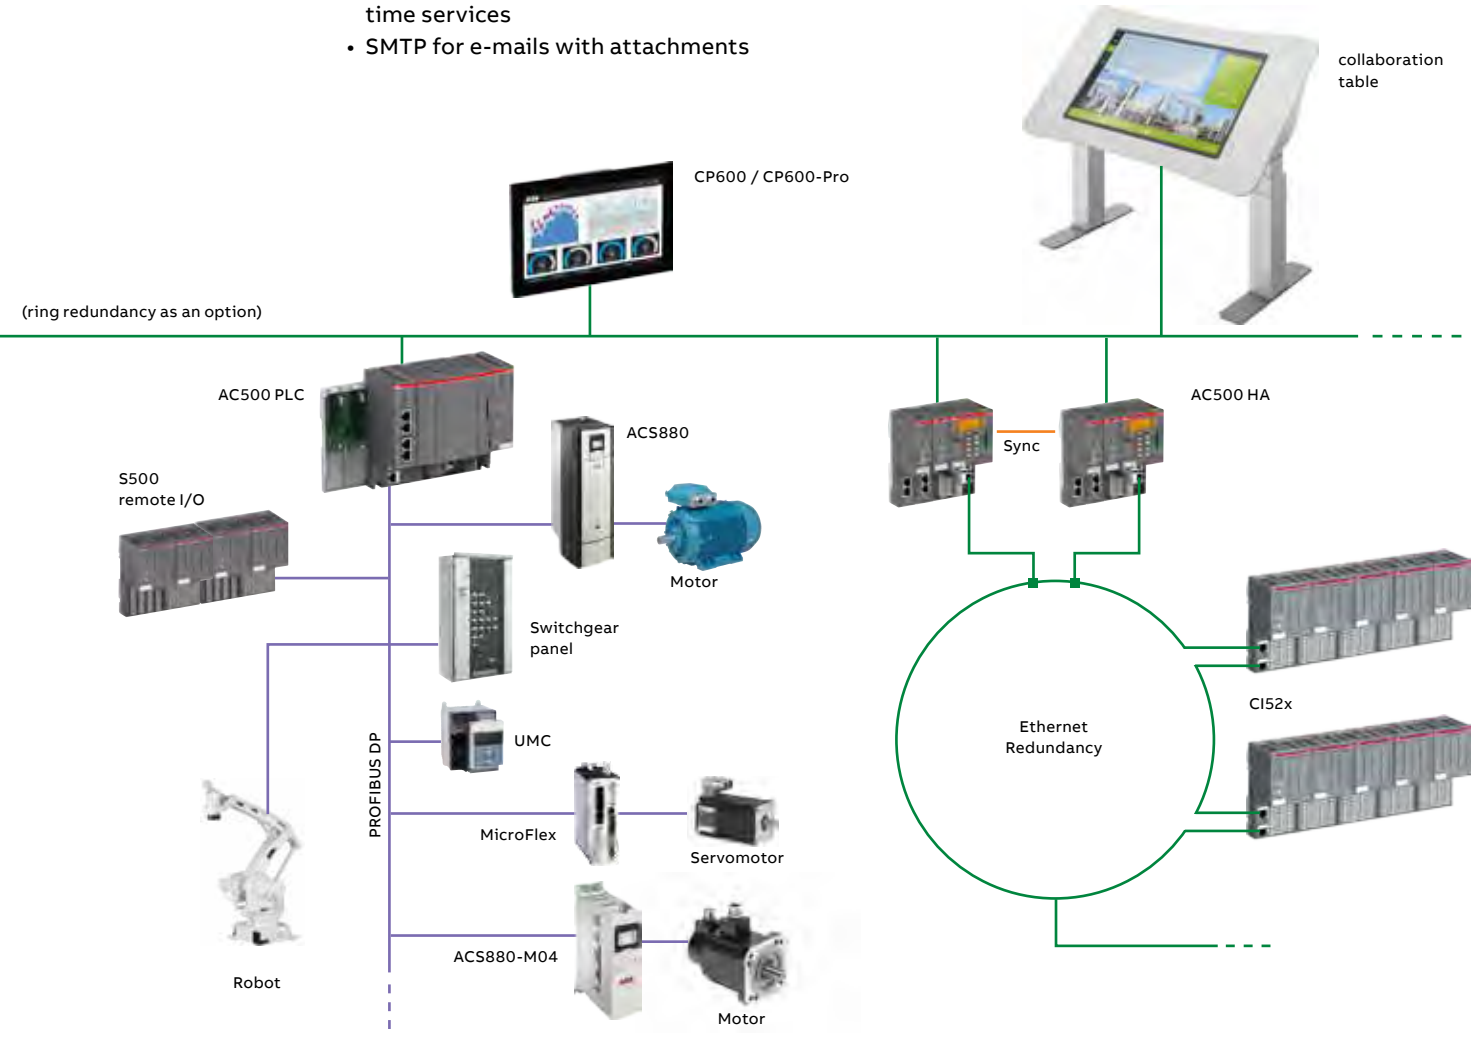
Modbus TCP & RTU
Modbus RTU is an open serial data protocol for master/slave networks of up to 31 network nodes. Different bus lengths depending on the type of serial communication interface enable data transfer speeds of up to 115.2 Kbit/s. Modbus TCP is a common Ethernet-based network protocol.

Ethernet and Internet
Integrated communication, high data transfer rates and the use of existing data networks enable simple, customer-specific solutions. Supported protocols are:

- HTTP / HTTPs for web server. Visualization for remote operation and maintenance
- FTP / FTPs for data file transfer
- Simple Network Time Protocol (SNTP) offering PLC time synchronization using Internet-hosted time services
- SMTP for e-mails with attachments
- TCP and UDP ports programmable for project-specific protocols. Library functions available.
- IEC60870-5-104 telecontrol, mainly used for pipelines, water and waste-water. Suitable for protocol configuration with the Automation Builder software suite.
- DHCP for automatic IP address allocation
- PING for checking the connection with other automation devices

EtherCAT
EtherCAT is an open Industrial Ethernet standard certified according to international standards IEC 61158, IEC 61784 and ISO 15745-4. Thanks to extremely high data transfer speeds, EtherCAT can serve as real time Ethernet protocol for time critical motion control applications. Whether for "cam switch" functionalities or diverse master/slave network configurations, AC500 delivers the perfect solution for your application.

BACnet
An object oriented open Infrastructure and Building Automation protocol supported by a Server Library (B-ASC) for OEM and project use cases.



PLC Automation product family
Automation Builder

Engineering productivity for machine builders and system integrators.

(6) C/C++, ECAD data exchange, CSV interface extensions, project compare
(7) Virtual Commissioning Platform for virtual system testing, Professional Developer Tools for multi-user engineering

Discover engineering productivity when designing your automation solutions
Automation Builder is ABB's integrated programming, simulation, commissioning and maintenance environment for PLCs, safety, drives, motion, control panels and SCADA. Automation Builder combines the proven ABB tools Drive Manager, Drive composer pro, Mint WorkBench, Panel Builder and ABB zenon.

Always get the right scope of Automation Builder for your automation solutions
One single software installer helps you to create and maintain your personal Automation Builder configuration - either on your PC or on a server. Any changes or updates are just a matter of a few mouse clicks. The Automation Builder licensing system is designed for supporting most operation scenarios. Licenses can be installed on PCs, USB dongles or license servers. In case of changes in the organization or in the engineering workflows the licenses can easily be transferred to where you need them.

Next level engineering efficiency
Improve your engineering efficiency by maximizing data re-use. Data that is available from third party tools can be imported or synchronized, either via dedicated interfaces or generic Excel sheets. Configurations that have been created for the PLC can automatically be re-used e.g. for the configuration of drives or operator panels.

Engineering efforts can be reduced further by using easy-to-use libraries e.g. for wind, water, solar, drives, motion, robotics, safety and building automation applications. And in case building blocks are missing for your automation solution simply create them yourself. Project scripting allows you to automate the creation of any party of your configuration or application.

PLC Automation product family
Automation Builder

Minimized efforts for project code and data administration
Configure and program all devices of your automation solution in one single project. This makes it easy to share your solutions with others. For more advanced usage the integrated version control system supports further scenarios like multi-user engineering or product line management.

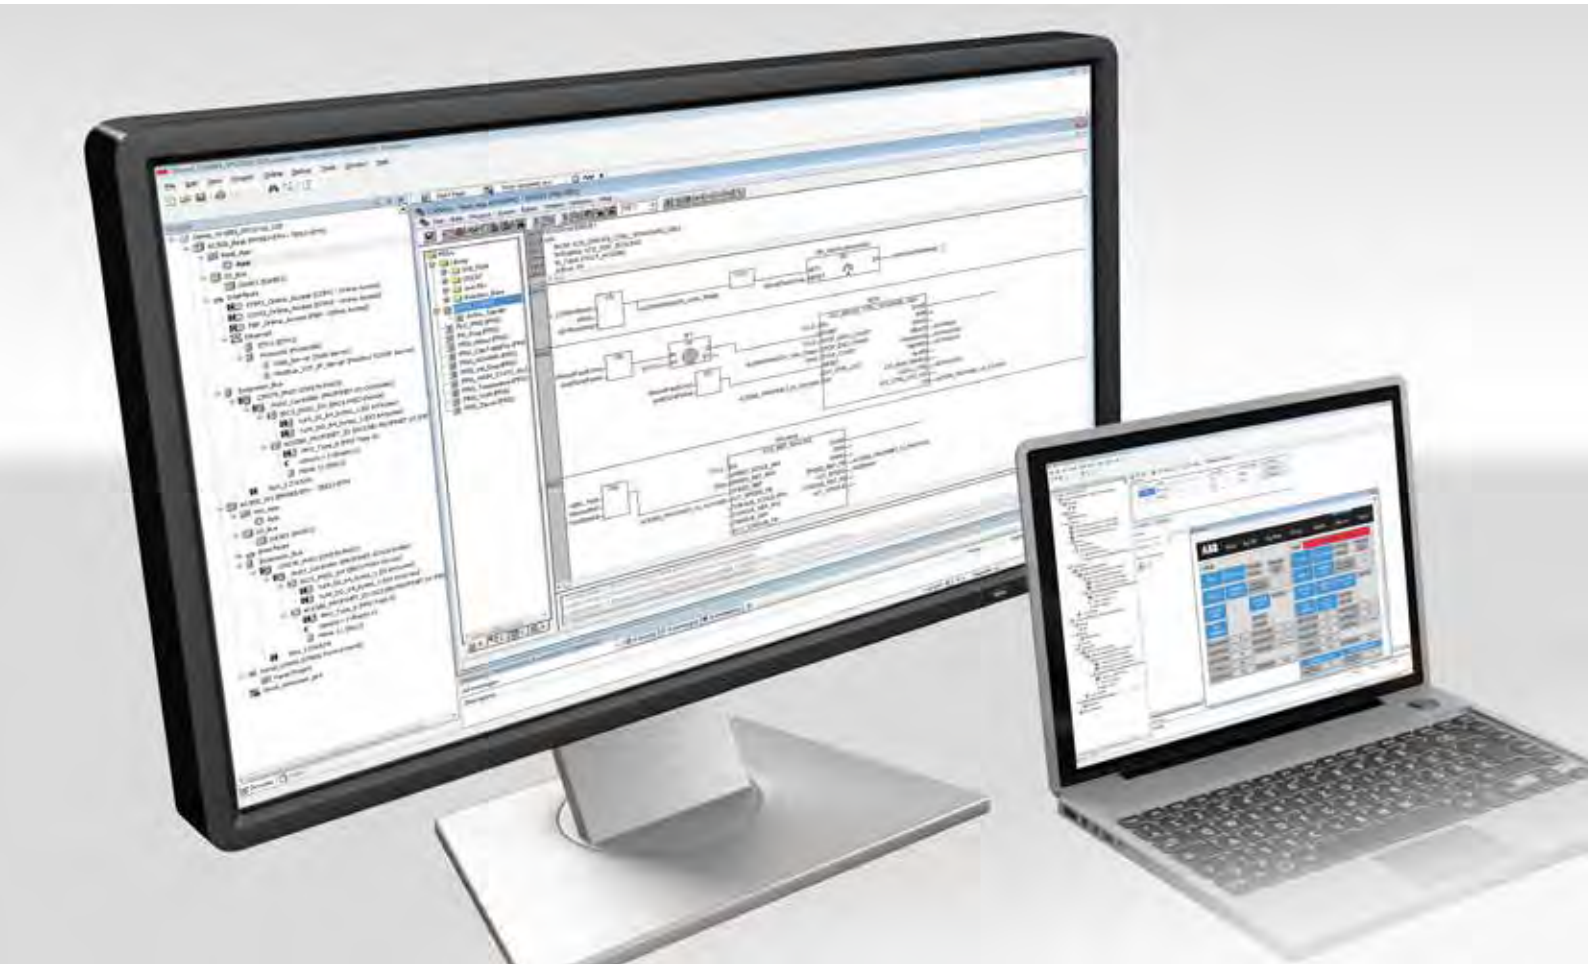
Managing the life-cycle of your automation solutions is also easy. The annual Automation Builder release also supplies you with the latest versions of device firmware. The decision, whether to use the latest firmware with the latest feature set or to keep the current firmware with the current feature set can be made for each project and independent of the installed Automation Builder version.

Speeding up during commissioning and maintenance
Whenever there is an issue in the automation system, it is required to quickly and efficiently fix it. Automation Builder supports this by a generic three-step approach:
- General diagnosis provides a traffic light view on devices and (sub)systems.
- Detailed diagnosis provides detailed information e.g. about the source and the type of the issue.
- Extended diagnosis is available for some subsystems such as fieldbuses and offers advanced commissioning functions such as comparing connected vs. configured devices or manual control of bus states.

The diagnosis information is accessible not only via Automation Builder, but also via the AC500 display, the PLC application or operator panels.

Easily create a connected world
To achieve advanced connectivity, the ABB zenon software has been added to Automation Builder. The advantage of the ABB zenon software is that it provides high quality documentation for easy traceability and high transparency of automation system states as required in machine building or in infrastructure projects. It incorporates an energy data management system and comprehensive security features to unlock the potential of the Internet of Things.

Virtual commissioning – a game changer in engineering
Simulate and automate all kinds of applications with minimum effort. Test the complete system seamlessly before involving real hardware. Even complex systems can be built up efficiently, ensuring smooth interaction of all components and operator training at an early stage.



Download Automation Builder from
www.abb.com/automationbuilder
Familiarize yourself with Automation Builder using the 30-day test license.

PLC Automation product family
AC500 libraries and software

A good investment for system integrators and end-users, AC500 libraries and software improve stability while reducing warranty costs and service. Library and software packages contain functions or protocols and easy-to-use examples for minimal programming effort and quick implementation of complex and demanding applications.

AC500 libraries and software deliver the seamless integration of PLCs, drives and HMI required to build and commission automation solutions quickly and easily. AC500 libraries and software by ABB are maintained to ensure that your programs can also be used with less risk.

Solar library
Library package for solar trackers increasing energy efficiency, providing quick commissioning and excellent positioning accuracy.

Water library
Library package with energy efficiency functionalities offering quick commissioning of water applications, such as pump stations with remote communication.

Temperature control library
Library package for the advanced PID temperature control of demanding applications, for example extrusion.

HA-CS31 library
Library package adds high availability system functionality for redundant hot standby over serial CS-31 bus.

Drive integration library
Library package for the quick integration of ABB ACS drives using different fieldbusses.

Motion control library
Library package for decentral, central and coordinated motion according to the PLCopen standard.

BACnet library
Library package adds BACnet-ASC Device Profile for communication to BMS Building Management Systems in larger infrastructure projects.

HA-Modbus TCP library
Library package adds High Availability System functionality for redundant hot standby over Ethernet field network via Modbus TCP.

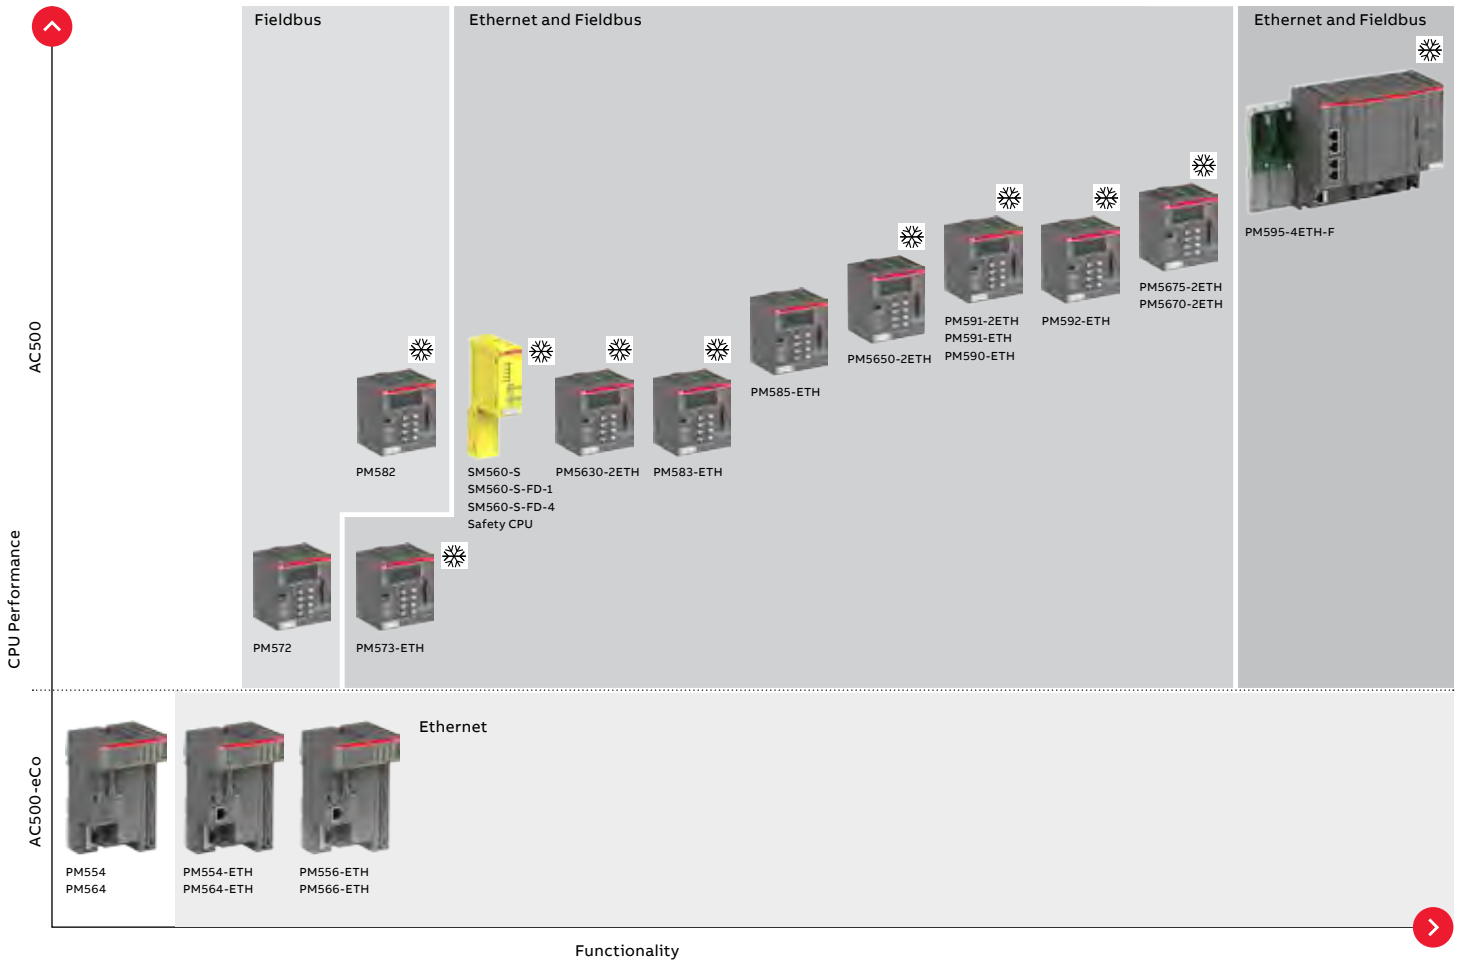
KNX protocol
Engineering and protocol package which seamlessly integrates ETS and Automation Builder.

61850 protocol
Adds engineering tool and library for 61850 Ed.1 MMS Server and GOOSE publish and subscribe functionalities.

PLC Automation product family
PLCs at a glance…

AC500 Programmable Logic Controllers with scalable, state-of-the-art technology for better performance.

Standard industrial communication fieldbus, network and protocols supported by the 'One Platform' solution make the AC500 the perfect automation solution in even the most demanding environments. Flexible and scalable superior CPUs deliver performance whenever and wherever you need it.



Ethernet enabled
Fieldbus enabled
Ethernet, Fieldbus and High Availability enabled
Ethernet, Fieldbus, High Availability and enlarged memory
eXtreme Conditions version available

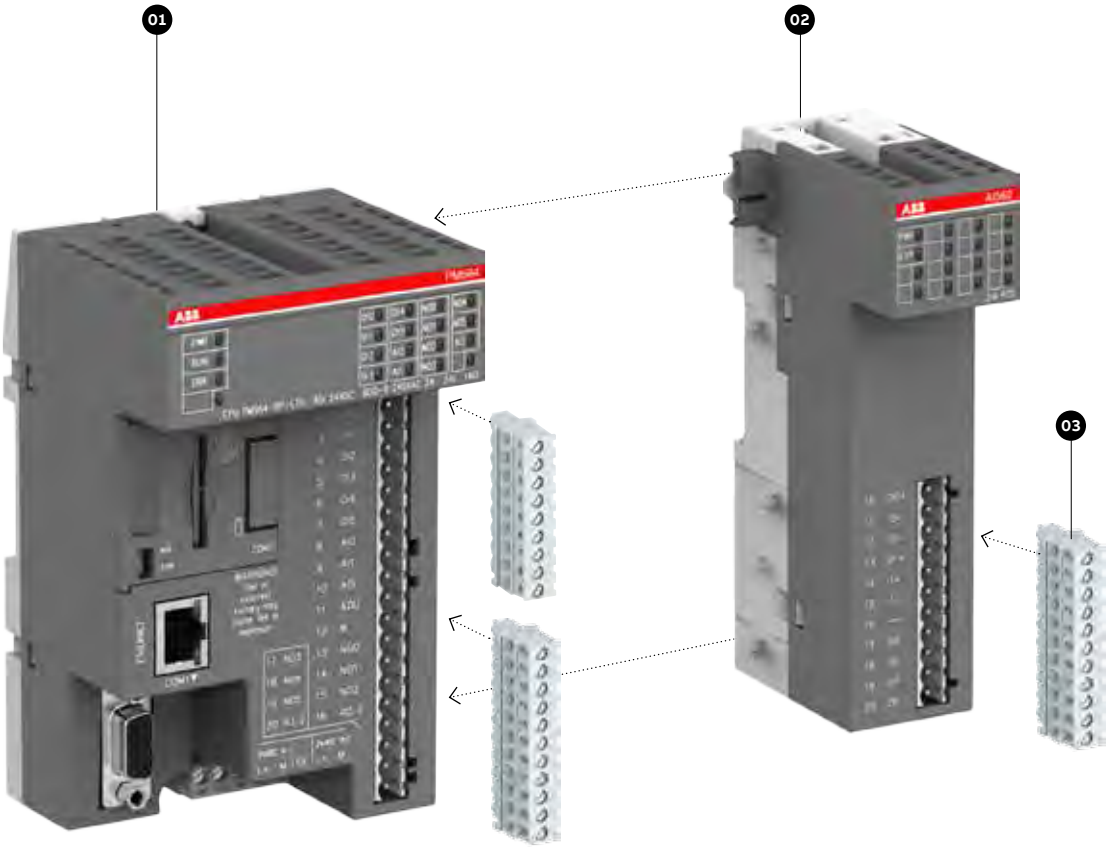
AC500-eCo – modular concept

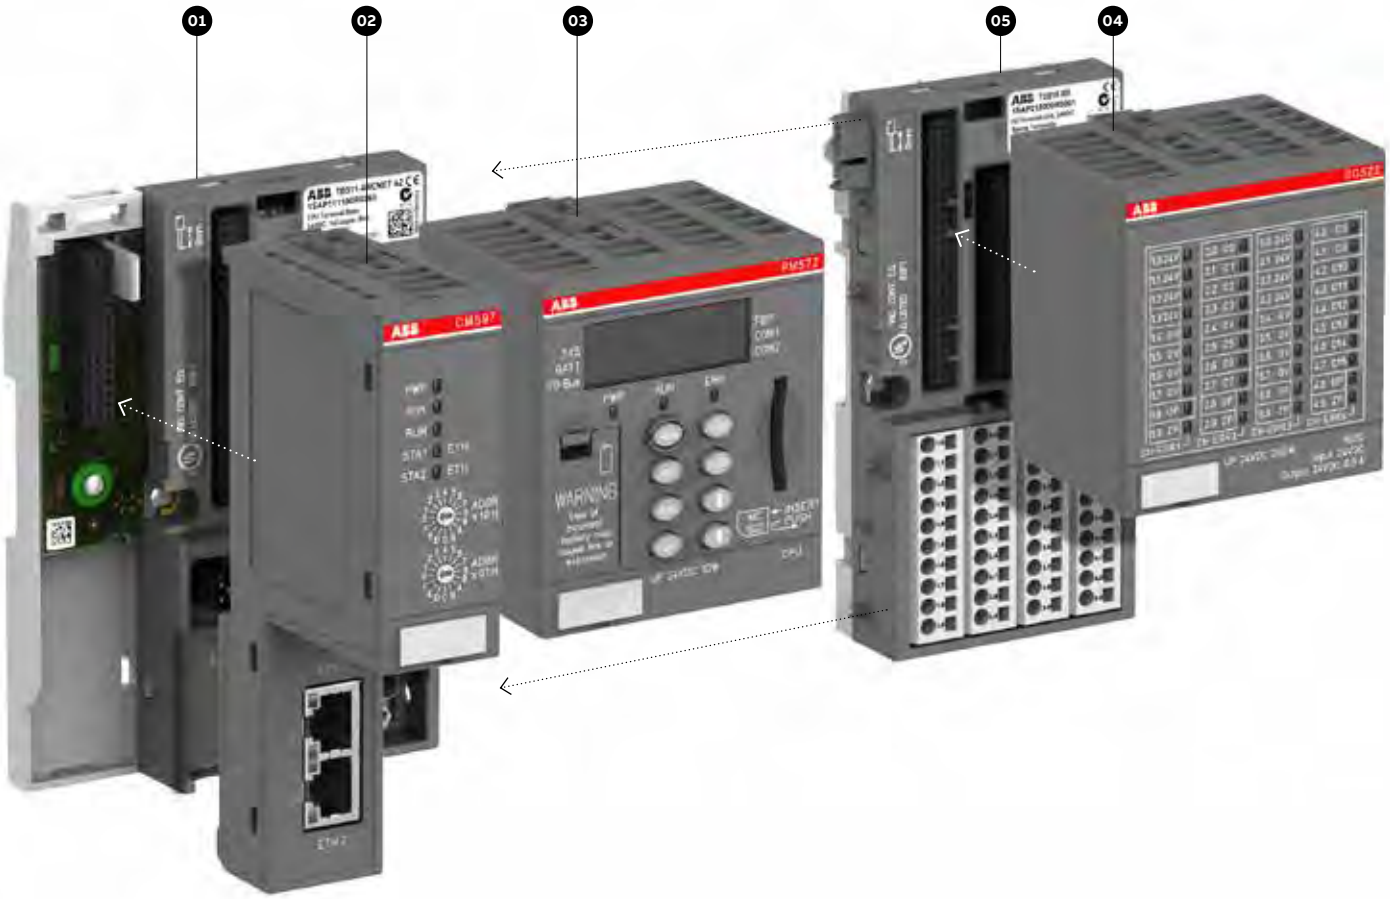


01 – AC500-eCo central processing unit (CPU)
- Different memory options
- Integrated communication option.

02 – S500-eCo I/O modules
- Up to 10 expansions
- Decentralized extension available.

03 – Terminal blocks
- Three types of pluggable terminal blocks available.

PLC Automation product family
AC500 and AC500-XC – modular concept



01 – Terminal base
- Common for all AC500 CPU types
- For 1, 2 or 4 communication modules
- With serial interfaces
- With 1 or 2 Ethernet interfaces
- New specific terminal base only for AC500 V3 CPU with 2 Ethernet interfaces and CAN interface.

02 – Communication modules
- For PROFIBUS DP, Ethernet, Modbus TCP, EtherCAT, CANopen, PROFINET IO or serial programmable
- Up to 4 pluggable
- Up to 6 pluggable for AC500 V3 CPU in development.

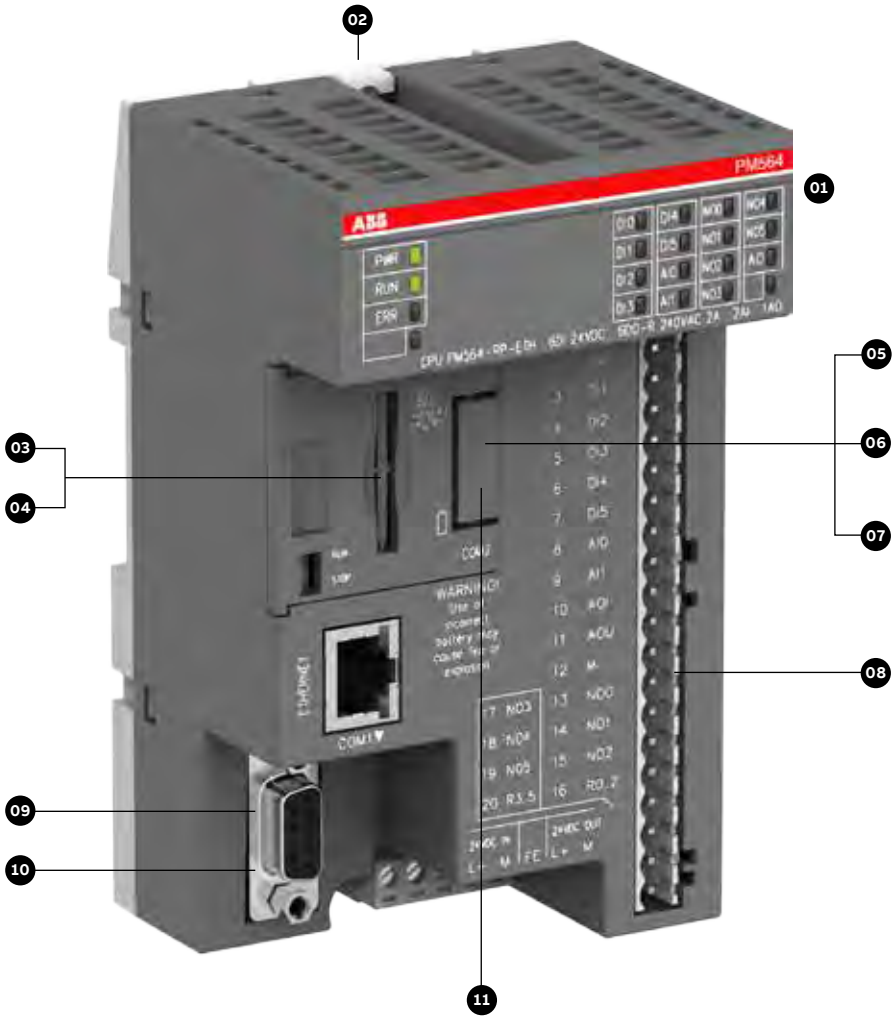
03 – AC500 central processing unit (CPU)
- Different performance, memory, network, operating conditions options
- Integrated communication
- New AC500 V3 CPU with large memory and high performance (requires new specific terminal base).

04 – S500 I/O modules
- Up to 10 expansions
- Decentralized extension available.

05 – Terminal units
- Up to 10 terminal units
- Decentralized extension available.

PLC Automation product family
AC500-eCo system characteristics

Locally, AC500-eCo CPUs are expandable with up to 10 I/O modules. AC500-eCo CPUs with different performance levels are available.



—
01 AC500-eCo CPUs are locally expandable with up to 10 I/O modules (standard S500 and S500-eCo I/O modules can be mixed).

AC500 PM595 Controller system characteristics

The flagship of the AC500 platform, the AC500 PM595 Controller, was designed to be as scalable, flexible and efficient as the entire AC500 range.

With the AC500 CPU PM595, ABB launched a new core for machine control applications. Its high-performance processor with generous memory offers performance, security and reliability for the upcoming challenges of automation applications.

A variety of connectivity capabilities, integrated safety and utilizability even under rough environment provide machine builders with valuable benefits when performing their automation tasks.

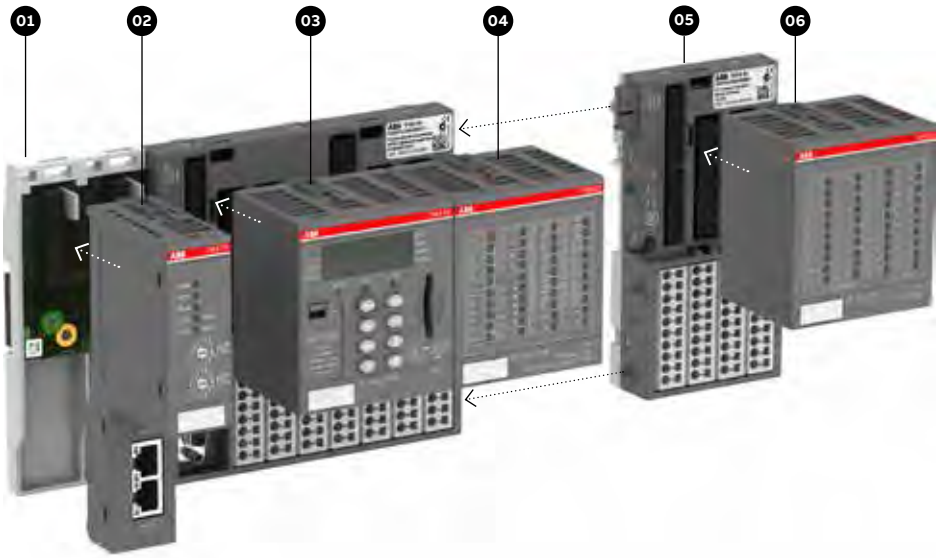
Condition monitoring system CMS based on AC500

Predictable performance for your operations

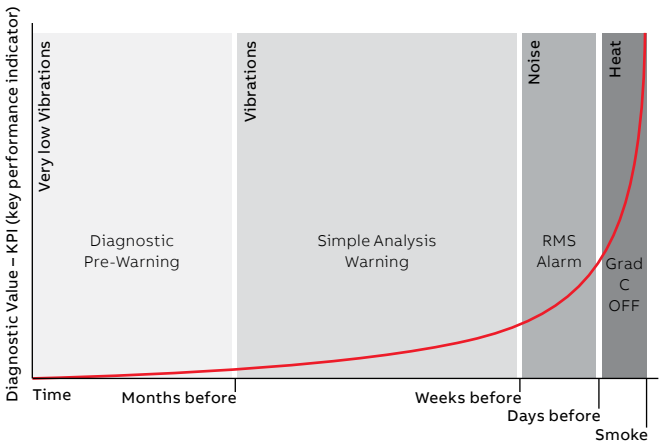
Optimize your assets with a condition monitoring system (CMS) based on the proven AC500 platform. The new FM502 module can help you to improve your operations resulting in greater efficiency and higher reliability while minimizing service and operating costs.



—
01 Terminal base: TF501 or TF521
—
02 Accomodating: 0 - 2 communication modules
—
03 PM592 CPU
—
04 FM502 CMS module
—
05 Expandable by I/O terminal units
—
06 Expandable by further I/O modules

Add predictable performance and productivity
The new CMS module brings further reliability and easy integration with all kinds of machinery systems, enabling precise management of the real-time condition of your operation. This transparency takes your business and productivity to a new level with more efficient machines, predictable performance and significant reduction in maintenance costs.

No matter whether as stand-alone condition monitoring or integrated into machine or process control, the module is perfectly suited to build optimized, self-analyzing automation solutions that simultaneously perform condition monitoring, control, protection, safety and data logger functions with one controller. The fast data logger function also contributes to consistent high quality production, due to the possibility to combine control and production information directly.



CMS also protects against machine failures, unforeseen sudden damage, incorrect installation, and reduces maintenance and wear. Virtually no unscheduled downtimes boost plant availability and reliability.

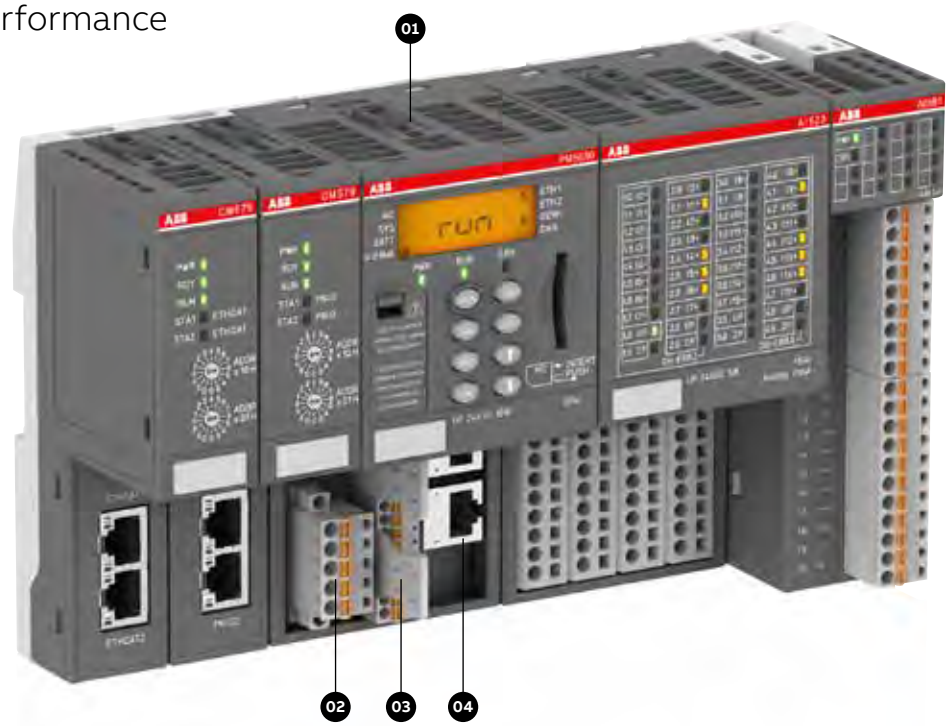
Advantages
- Planned maintenance rather than spontaneous repair ensures predictable performance
- Approaching damage is identified very early
- Protection against spontaneous failures and operation in critical conditions
- Reduction of costs in maintenance and lost production time
- Plant availability is increased
- Optimum utilization of the aggregates until real end of life
- Simple to use, maintain, adapt or expand

AC500 + CMS = increased machine efficiency
All based on the AC500 platform modularity provides ultimate flexibility: Communication and I/O modules can be added and combined with Safety.

Expandable, robust and proven
- Stand-alone CMS or control integrated
- Expandable by AC500 communication modules and S500 I/O modules
- Proven and future proof, as based on AC500 platform
- Extreme conditions XC version available
- Fast data logger, e. g. for production quality
- Condition monitoring and fast protection (vibration, current, voltage, speed/encoder)

PLC Automation product family
AC500 V3

AC500 V3 delivers new features and higher performance



—
01 PM5650-2ETH CPU module
—
02 One CAN serial interface
—
03 One COM1 serial interface
—
04 Two Ethernet interfaces on RJ45

New CPU range PM56xx with higher hardware performance and state-of-the-art features, such as OPC UA, WebVisu, Object oriented programming, selectable fieldbus protocols, and much more.

Improved features and performance
The AC500 platform features a new more powerful CPU with larger memory for various automation solutions ranging from simple to complex motion control applications.

Configurable Ethernet fieldbus protocols, such as PROFINET IO (*), EtherCAT (*) or EthernetIP (*) running on standard Ethernet interfaces, enable the CPU to be used for applications with embedded protocols. The integrated Ethernet switch simplifies the network architecture, making additional external switches obsolete, and thereby also saving cabinet space. Fewer hardware types facilitate spare-parts stocking thus increasing flexibility.

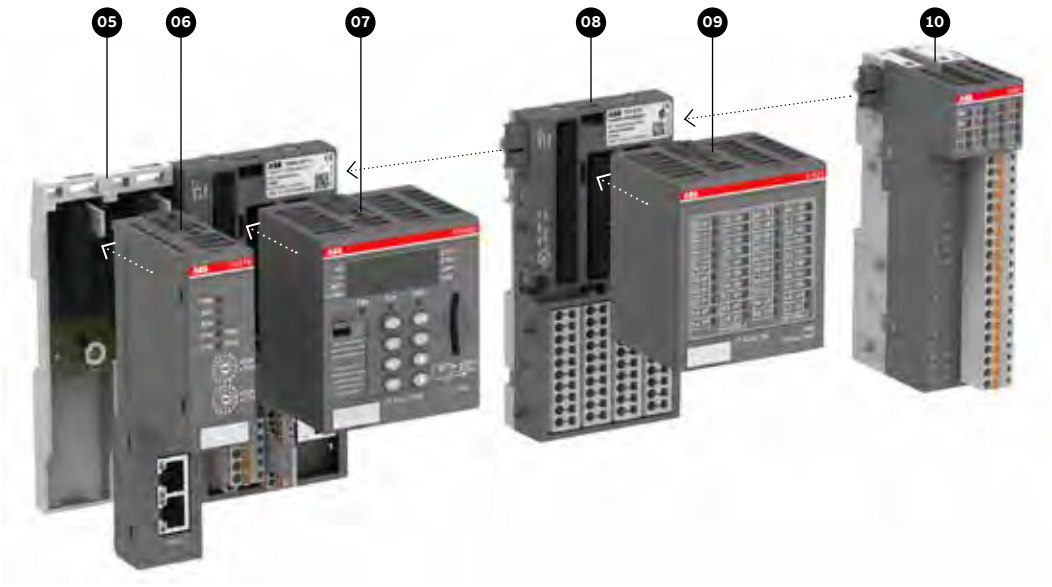
The CPU also provides an integrated CAN / CANopen interface offering an easy-to-use and fast connection to remote I/Os or drives. Various CAN protocols, e.g. CANopen Master and Slave (*), J1939 or CAN 2A/2B are available, and modular CAN is also supported.

Improved application flexibility and facilitated customer engineering
Fewer hardware products but more configurable and licensed features allow for customizing the product according to your specific application.

From 8 MB to up to 160 MB of memory and dynamic allocation to User Data, Program or Web Server, the new CPU meets almost every application requirement by adapting its configuration according to your needs.

State-of-the-art features tailored to your needs
Improved communication features integrated in the CPUs lower hardware costs and reduce the number of versions. Compatibility (*) with existing S500 / S500-eCo I/O modules, communication modules, communication interface modules and AC500-S safety modules of the existing AC500 PLC platform.

(*) in preparation



—
05 Terminal base: TB5xxx-2ETH
—
06 Accomodating: 0, 1, 2, 4 or up to 6 communication modules
—
07 PM56xx-2ETH CPU module
—
08 Expandable by I/O terminal units
—
09 Expandable by further I/O modules from the S500 product range
—
10 or S500-eCo product range

Connection to third-party systems in open architecture
The integrated EthernetIP protocol (*) enables to connect existing applications or third-party systems. Standardized protocols or features such as OPC UA save time and costs and simplify the connection to SCADA.

New Web Server based on HTML 5

Two embedded Ethernet Interfaces:
- Independent (2xMAC) or Switched
- A lot of onboard ETH features:
  - OPC UA Server (easier connection to SCADA, panels, third-party, IoTSP)
- Ethernet IP adapter (*)
- Modbus TCP client/server
- IEC 60870 (with new features)
- Network variables (UDP)
- IEC 61850 protocol licensed

Reduced cabinet space with more integrated features
Integrated interfaces and configurable protocols reduce the CPU size thus saving cabinet space.

Reliability and security
Signed boot project, Firmware and secure download protect your application from unauthorized changes and HTTPs and FTPs strengthen your protection.

Functional safety
Reusing AC500-S safety solutions (*) provides state-of-the-art safety features and reduces engineering time.

Protection of customer investment
Reusing AC500/S500 products protects your investments and allows easy upgrades / migration from current applications to the latest technology for the coming years.

The PM56xx CPU can be used only with the new terminal base range TB56xx but can reuse many existing AC500 platform products like I/O modules, communication modules, etc.

Improved engineering, programming and debugging
Running on the new AC500 V3 CPU, several new features of the Automation Builder software make the AC500 platform more powerful and easier to use:
- Professional Version Control with subversion - application project management
- Object-oriented programming
- New optimized editors for IEC programming languages
- Virtual commissioning

For details, please refer to Automation Builder 2.0, section Highlights - productivity features page 59.

—
06 Extreme conditions S500 I/O module

Operation in extremely humid environments
- Increased resistance against 100 % humidity and condensation.

Reliable in high altitudes
- Operation in altitudes up to 4000 m above sea level or air pressures up to 620 hPa.

Extended immunity to vibration
- 4 g rms random vibration up to 500 Hz
- 2 g sinusoidal vibration up to 500 Hz.

Extended operating temperature
- -40 °C up to +70 °C operating temperature.

Extended immunity to corrosive gases and salt mist
- G3, 3C2 / 3C3 immunity
- Salt mist EN 60068-2-52 / EN 60068-2-11.

Extended EMC requirements
- EN 61000-4-5 surge immunity test
- EN 61000-4-4 transient / burst immunity test.

PLC Automation product family
Functional Safety

AC500-S safety PLC is the solution for both simple and complex machine safety applications requiring maximum reliability, efficiency and flexibility.

This safety PLC protects people, machines and processes, the environment and investments - the ideal choice for wind turbine, crane, material handling, hoist, robot and other factory and process applications.

Better integration and ease of programming
Featuring a consistent look and feel across the entire range, the AC500 is the PLC of choice for applications where uncompromised flexibility, comprehensive integration and seamless communication are a must. Automation Builder seamlessly integrates your safety application in ABB PLC, Safety, Drives, Motion and HMI. Through integrated standard languages, such as IEC 61131-3, Automation Builder is easy to use, thus, allowing you to get started in virtually no time at all. And what is more: intuitive system configuration using one single tool ensures optimal transparency.

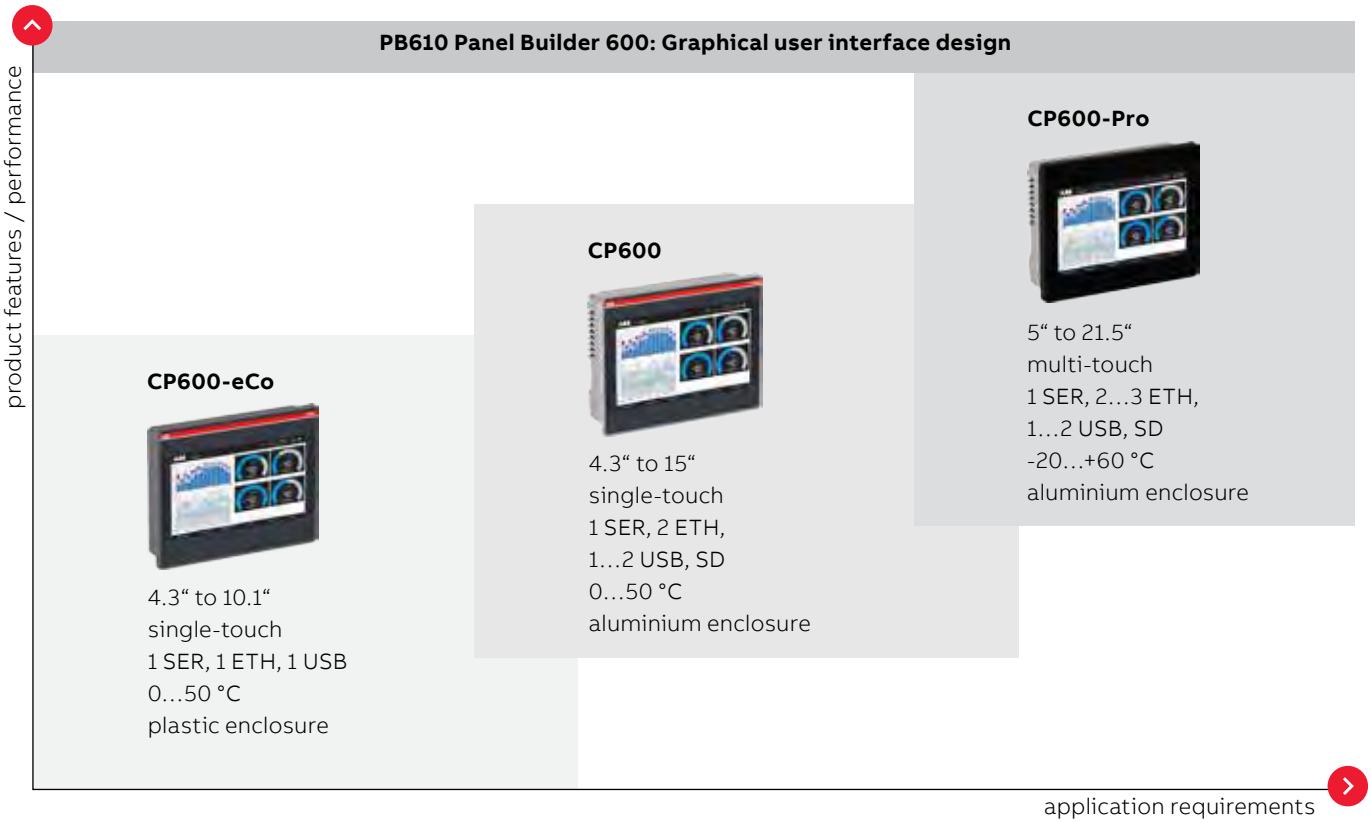
The AC500-S safety PLC, ABB's latest addition to the AC500 family, facilitates the implementation of even most complex safety applications. Support of safety-relevant calculations, such as COS, SIN, TAN, ASIN, ACOS and LOG makes the AC500-S the ideal solution for crane engineering, wind power generation, robotics and hoisting applications. Safety programming with Structured Text (ST) and full support for Function Block Diagram (FBD) and Ladder Diagram (LD) programming and advanced features in PROFIsafe over PROFINET communication, like Shared Device functions, gives you greater flexibility and simplifies safety application development. The AC500-S safety PLC is also available in a version for extreme conditions.

PLC Automation product family
CP600-eCo, CP600 and CP600-Pro control panels at a glance …

ABB offers a wide range of scalable PLCs and robust HMI control panels.

With comprehensive but easy-to-use functionalities, ABB control panels stand out from competitor products. At one single touch, they intuitively provide operators with tailor-made operational information for production plants and machines. CP600-eCo, CP600 and CP600-Pro control panels make machine operation efficient, predictable and user-friendly.

Comprehensive CP600 control panels platform for different applications



CP600-eCo, CP600, CP600-Pro
Wide range of control panel offerings in three assortments. Ideal choice for visualization of AC500 PLC platform automation solution.

The economical CP600-eCo control panel is aimed for standard functions and high usability for clear interaction with the operation process.

The robust CP600 HMI provides high visualization performance, versatile communication and representative design for machines and systems.

The CP600-Pro HMI comes with high end visualization performance, multi-touch operation, versatile trendsetting communication and representative design.

Due to the good scalability between CP600-eCo, CP600 and CP600-Pro, CP600-eCo HMI applications can be re-used easily for CP600 or CP600-Pro control panels and vice versa.

PB610 Panel Builder 600
PB610 Panel Builder 600 is the engineering tool for the entire CP600 control panels platform. PB610 Panel Builder 600 software is integrated in the Automation Builder engineering suite. For integration into a couple of third party automation systems, drivers are available. OPC UA client and server support future-orientated communication solutions.

What does your application need ?

PLC Automation product family
CP600-eCo control panels

Economic HMI range for basic applications
Control panels in three different screen sizes from 4.3“ to 10.1“ in ABB design or just black provide HMI functions typically required for basic applications. The engineering tool PB610 Panel Builder 600, part of Automation Builder, ensures easy scalability on the CP600 platform.

Designed for basic applications
- The widescreens available in 4.3“, 7“ and 10.1“ are suitable for many applications.
- Protocols for ABB PLCs, machinery and motion drives for Ethernet and serial connection make these control panels first choice for ABB automation solutions.
- OPC UA client and server functions make them well prepared for future communication solutions.
- Engineering by means of PB610 Panel Builder 600, part of ABB’s Automation Builder, facilitates integration into automation packages and enables good scalability on the CP600 platform for different applications.

Slim industrial design
The slim plastic enclosure in attractive industrial design with a mounting depth of 29 mm enables installation even in narrow spaces. All connectors are located on one side. Landscape and portrait mounting options provide installation flexibility and various HMI presentations. These devices are available either in ABB design or in black.

State-of-the-art connectivity
- Ethernet interface 10/100 Mbit for easy connectivity to ABB automation components.
- Flexible serial connectivity to automation components without Ethernet interface.
- USB host for flexible data storage and easy updating.

PLC Automation product family
CP600 control panels

Comprehensive HMI range for versatile applications
Various control panels in screen sizes from 4.3“ to 15“ provide comprehensive HMI functions for a wide range of applications. The range is completed by panels in sanitary design (page 42) as well as black variants. The engineering tool PB610 Panel Builder 600, part of Automation Builder, ensures easy scalability on the CP600 platform.

Various designs for diverse applications
- Seven different screen sizes with standard aspect ratio or widescreen from 4.3” to 15” are suitable for the most diverse applications.
- Protocols for ABB PLCs, machinery and motion drives for Ethernet and serial connection make these control panels first choice for ABB automation solutions. The IRC5 protocol enables easy direct communication with ABB robot controllers.
- OPC UA client and server functions make them well prepared for future communication solutions.
- Engineering by means of PB610 Panel Builder 600, part of ABB’s Automation Builder, facilitates integration into automation packages and enables good scalability on the CP600 platform for versatile applications.

Solid aluminum design
The robust aluminum enclosure in attractive industrial design, providing all connectors on one side, enables installation in various environments. Landscape and portrait mounting options provide installation flexibility and various HMI presentations.

Various options for flexible connectivity and data storage
- 2 Ethernet interfaces 10/100 Mbit with integrated switch for easy connectivity to ABB automation components.
- Flexible serial connectivity to automation components without Ethernet interface.
- USB hosts for the flexible connection of accessories or data storage and easy updating.
- SD card slot for easy data storage and updating.

PLC Automation product family
CP600 sanitary design control panels

The CP635-FB and CP635-FW control panels are especially designed for reliable operation in harsh environments such as mixers in meat processing. These panels withstand the demanding cleaning procedures in meat processing better than most of the similar products in the market: stainless steel frame, rounded edges and front protection class IP69K make them withstand harsh cleaning procedures with high-pressure hot water jets directed at the equipment in different angles according to the relevant hygienic standards.

The displays of the control panels CP635-FB and CP635-FW are brighter than standard units, because of real glass screens. This ensures clear information for operators/users even in bright environments. Capacitive touch screens enable quick and easy operation even with gloves.

Control panels in sanitary design for demanding applications
Hygienic standards and cleaning procedures in food & beverage applications typically require a special design of the relevant automation components. Human machine interfaces (HMIs) for meat processing have to comply with really challenging requirements. As a consequence e.g. mixers and cutters for meat processing are usually still equipped with conventional lamps and switches instead of state-of-the-art HMIs.

PLC Automation product family
CP600-Pro control panels

Outstanding HMI range designed for challenging applications
New control panels in screen sizes from 5“ to 21.5“ provide comprehensive HMI functions with multi-touch operation for a wide range of applications. Real glass fronts and an increased operating temperature range of -20…+60 °C make them first choice even for harsh environments. The engineering tool PB610 Panel Builder 600, part of Automation Builder, ensures easy scalability on the CP600 platform.

New multi-touch control panels for high-end applications
- The portfolio includes five screen sizes from 5” to 21.5”, all widescreen, with multi-touch real glass screens for demanding high-end applications.
- The wide range of operating temperatures of -20…+60 °C makes them suitable for versatile applications and first choice for demanding ones.
- Protocols for ABB PLCs, machinery and motion drives for Ethernet and serial connection make these control panels preferred option for ABB automation solutions.
- OPC UA client and server functions make them well prepared for future communication solutions.
- Engineering by means of PB610 Panel Builder 600, part of ABB’s Automation Builder, facilitates integration into automation packages and enables good scalability on the CP600 platform for versatile applications.

Real glass front and solid aluminum enclosure
CP600-Pro control panels have real glass fronts and robust aluminum enclosures in attractive industrial design, with all connectors located on one side, for installation in various even demanding environments. Landscape and portrait mounting options support installation flexibility for various HMI presentations.

Flexible connectivity and data storage with a view to the future
- Up to 3 Ethernet networks with different physical layers for easy connectivity to ABB automation components for upcoming networking concepts.
- Flexible serial connectivity to automation components without Ethernet interface.
- USB hosts for connecting printers and accessories, data storage and updating.
- SD card slot for easy data storage and updating.

PLC Automation product family
Mobile / remote access to HMI

Mobile / remote access to HMI
All control panels of the CP600 platform provide a web server for flexible access to HMI applications via mobile devices: PB610 Panel Builder 600 enables easy creation of HTML5 pages for mobile devices like smartphones, tablets etc. within standard HMI applications. Remote devices can log in to the HMI application without installation of an app.

PLC Automation product family
PB610 Panel Builder 600

Engineering tool for easy design of tailor-made graphical user interfaces for the entire CP600 platform
PB610 Panel Builder 600 software is integrated in the Automation Builder engineering suite and can be downloaded via Automation Builder installer.

Tailor-made human machine interface (HMI)
- For the efficient design of flexible HMI applications in versatile automation solutions.
- Vector graphics (*.SVG) for precise, easily scalable and dynamic HMI design.
- Alpha blending for realistic transparency effects.
- Libraries including rich sets of widgets – ready-to-use graphical objects.
- Easy creation of customized widgets through the combination/modification of standard widgets.
- Customized widgets clearly arranged in user galleries.
- Page templates for professional design.
- Numerous configuration options for all HMI elements.
- Realization of customized functions and individual dynamic manipulation via Java Script with debugger.
- Easy data acquisition and trend presentation.
- Reliable user management and secure access control.
- Rich set of configurable features: dynamic objects, data acquisition, alarm handling, multi-language applications, recipes, …
- HMI simulation for efficient commissioning.
- Numerous drivers for easy connection to e.g. PLCs, drives, robots.
- OPC UA client and server for future-orientated cloud connectivity and IoT.
- Gateway function for easy data exchange between different protocols and systems.

Automation Builder
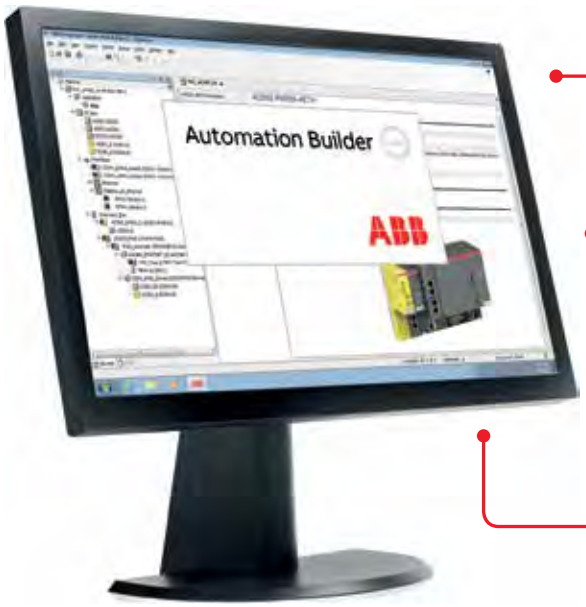
Key features

—

Stay in control of your project: Automation Builder integrates engineering tools for PLCs, safety, drives, motion, control panels and SCADA



—

Reduce risk: Manage complexity and realize connectivity easily

—

Increase efficiency:
Build comprehensive solutions with integrated engineering that add value to your business

—

Combine tools: One common intuitive interface for configuring, programming, debugging and maintaining automation projects

—

Save time: Test systems effortlessly in virtual time without real hardware using Virtual Commissioning technology

Automation Builder

Ordering data

Automation Builder

- Automation Builder connects the engineering tools for PLC, safety, drives, motion, control panels and SCADA. The software suite integrates products into solutions that create value for your customers, giving you greater control of your projects, reducing risk and saving time.
- Open systems win. They lead to more innovation, value and freedom of choice for your business. Automation Builder enables you to adapt the tool chain to your needs and workflows. The software is open for your specific product and communication technology to build your distinct solution.
- Automation Builder 2.1 provides advanced features, further increasing engineering productivity for discrete automation solutions.
- For details please refer to Automation Builder – Software Features.

Delivery includes a single user license, which can be used for creating applications for an unlimited number of CPUs. All library licenses can be installed on engineering PCs, on USB dongles or on a license server. The licenses can be transferred between computers or dongles unlimited times. Licenses from a license server can be borrowed for offline use.

AC500 Runtime Licenses

For	Description	Type	Order code	Price
All AC500 CPUs	Modbus TCP HA runtime license	PS5601-HA-MTCP	1SAP195400R0101	
All AC500 V3 CPUs	IEC 61850 protocol runtime license	PS5602-61850	1SAP195600R0101	
All AC500 V3 CPUs	KNX IP protocol runtime license	PS5604-KNX	1SAP195800R0101	

For using runtime licensed features one license per CPU is required. The license has to be installed on the AC500 V3 CPU either by connecting it to Automation Builder or via SD card that has been prepared by Automation Builder for license activation.
The licenses can be transferred between AC500 V3 CPUs unlimited times.

Further application libraries and examples:
Please check and download further libraries and examples from: www.abb.com/plc
Use English language setting, then click on "Application Examples".
Application Examples explain functionality by using e.g. standard Automation Builder libraries and functions in simple examples. They are tested in the described example configuration and functionality only, they come with documentation and are free of charge.
Applications Examples help to minimize valuable programming and testing time for specific applications.

◎ optional (additional license required) as integrated tool / feature / library
○ optional (additional license required) as standalone tool / feature - not integrated in Automation Builder
(1) additional runtime license per PLC required
(2) Limited support for Windows server operating systems - please contact ABB for further information
(*) Technology Preview: Technology Previews are non-final versions of our product and should not be taken as a measure of the fit, finish, capability, and overall quality of the product. While we don't stop using these versions in projects, we don't recommend it if data loss and the usual quirks of preview software cannot be afforded.

Automation Builder
Libraries features

PS562-SOLAR	PS563-WATER	PS564-TEMPCTRL
Solar tracker solution library	**Water solution library**	**Temperature control library**
Library for solar tracking applications enabling fast engineering, especially together with ABB's drives and motors Covers different tracker configurations and different algorithms for accuracy needs • Control of trackers in parabolic trough, power tower, PV and CPV applications. Complete library package for different tracking use cases, plug and play: Example program with detailed explanations and visualizations • Control of the tracker adaptable to different needs and conditions, to achieve maximum efficiency of installation • Exact positioning of different axes with the following accuracies: - NOAA algorithm 0.03 Grad - NREL algorithm 0.0003 Grad. • Input / sensor adaptation • Communication • Different actuators / drives control • All needed modes for simple commissioning and manual operation: - Fast and simple calibration of the trackers, offering manual repositioning and fine tuning - Safety positions - Back tracking.	Library supporting the most common functions in many water applications Flexible data logging options: • Especially suited for remote communication like GSM/GPRS • Timestamp in logging • Integrated variants for simple use with IEC 60870-5-104 • Logging to files: storage capacity only dependent on memory availability • Flexible log conditions (cyclic, event or tolerance based). Support for pumping station functions with different operation modes • Standard multidrive functions (PLC based) • Advanced functionality together with ABB ACS and ACQ810 drives • Detailed diagnosis • Energy efficiency functions • Multidrive functions • Flow estimation. Control Panel CP600 support for ACQ810: Fast and simple configuration for pumping stations with reduced programming effort via pre-built visualization screen templates. Application examples for fast engineering and startup.	Library packet for advanced temperature control applications Includes extended, flexible PID functionality with Auto-tune for temperature control • Enhanced response time and reduced overshoots and oscillations • Option to optimize control for very different heating and cooling characteristics. • Enhanced tolerance to thermocouple input noise • Normal and standby- setpoints • Multi-level temperature monitoring and alarms provides flexible operation and protection for machine and process • Logging enables complete overview of the actual situation and past behavior • Configurable output timing, synchronization for peak load shaving in multi-zone setups • Simulation blocks enable off-line setup and pre-test of a new project • Group-programming Example projects, including adaptable HMI project for CP600 family, well suited for multi zone and grouped temperature control e.g. in Extrusion: • Easy to use operator interface • Provides quick access to setup, monitoring and tuning screens for multiple zones • Easily expandable to a large number of zones • Zones: heat-, cool-only or heat-and-cool
License Package (Software is part of Automation Builder)		
All AC500 V2 CPUs NOAA: PM554-XX and above NREL: PM573-ETH and above.	All AC500 V2 CPUs Logging: PM573 and above.	All AC500 V2 CPUs.

Automation Builder
Libraries features

PS565-BACnet-ASC	PS552-MC-E
BACNet communication library	**Motion control library**
This library enables AC500 PLCs to connect OEM or infrastructure applications to BMS (Building Management Systems) or other controllers. The PS565-BACnet-ASC library enables AC500 to serve as BACnet server device, complying with the B-ASC Device Profile and interfacing control requirements, and acting as hardwired or Modbus-to-BACnet gateway. It supports BACnet IP (Ethernet) and BACnet MS/TP (serial) networks. The scalable AC500 platform is compatible with the BACnet library starting from eCo PM5x6 with larger memory (~ 300 objects) up to PM595 (more than 5000 objects). The very transparent, object-oriented publish and subscribe approach of BACnet allows efficient and well-documented engineering and collaboration of many different parties in large infrastructure projects. Highlights • Easy-to-use BACnet communication directly in the CPU • No coupler or gateways required • Cost-efficient particularly for OEMs and projects • Interfacing other non-BACnet devices to BMS. PS565 for AC500 is BTL-approved and certified	Library enabling fast and standardized engineering according to PLCopen standard when using ABB's AC500 PLC for motion control, especially together with ABB's motion control Drives. Covers different motion control options for single and multiaxis motion control applications: • Drive-Based and PLC-Based motion • In PLC based motion, the position control loop could be closed in the PLC or drive (with synchronized network) • Single axis, multiaxis and coordinated motion • Defined Jerk limitation by polynomial interpolation • Spline interpolation or polynomial interpolation for cam curves, position velocity or acceleration profiles available • Possible to switch over between different movements and cam curves directly • latch functionality by utilizing fast drive inputs for ACS350, ACS800, ACSM1 • Drive based motion: commands from PLC, drives perform interpolation and control loop • Supports the new Pulse Train Output module FM562. PLCopen functions: • Administrative Function Blocks • Single axis Function Blocks • Multiple axis Function Blocks • Homing Function Blocks • Coordinated Motion Function Blocks • Additional ABB specific Function Blocks for further simplification.
License Package (Software is part of Automation Builder)	
All AC500 V2 CPUs, starting from PM5x6 (~300 objects) up to PM595 (>5000 objects)	All AC500 V2 CPUs (options and no. of blocks/ functions and performance will depend on CPU size and memory).

Automation Builder
License features

PS5604-KNX

KNX IP communication

This runtime license enables the AC500 V3 PLC to connect to KNX IP.

The protocol and configuration options are part of Automation Builder and FW. The runtime license is needed for download.

Support of
- Up to 1000 group objects
- Programming the physical address via ETS
- Downloading the KNX group address linking via ETS

Highlights
- Easy to use KNX communication directly in CPU due to tight ETS5 and Automation Builder integration via DCA
- No coupler or gateways needed
- Cost-efficient especially for OEMs and projects
- Enables holistic building automation solutions.

PS5602-61850

IEC 61850 MMS server and GOOSE communication

This runtime license enables the AC500 V3 PLC to connect to substation type equipment (IEDs) or act as IED.

The protocol library and configuration tool are part of Automation Builder. The runtime license is needed for download.

61850 server edition 1 allows:
- sending MMS messages to ensure a safe data communication – no real time support
- publishing and subscribing to GOOSE messages for high priority peer-to-peer data exchange between different servers to ensure a data transmission with minimal delay
- up to 5 client connections per server
- up to 50 entries per dataset
- up to 20 datasets

Automation Builder used as IED configuration tool
- Import / export of SCL files formats
- ICD – IED capability description file
- SCD – substation configuration description file
- CID – configured IED description file

Basic display options

Highlights
- Wide set of Logical Nodes provided
- Further Logical Nodes can be defined
- Implementation can be programmed freely in IEC61131.

PS5601-HA-MTCP

High availability library using Ethernet (Modbus TCP)

Runtime license per CPU to download library into the CPU.

Same philosophy as proven serial/CS31 based library.

Enables hot-standby redundancy and bumpless transfer with standard AC500 CPUs.
Supports 3 redundancy levels:
- CPU
- I/O
- SCADA communication

Library package containing libraries based on Modbus TCP for field communication and using CI52x communication interface modules as I/O clusters with redundant connection.

Ethernet redundancy based on externally managed switches: Ethernet network can be independent of the redundancy mechanism used.
- Daisy chain in ring configuration of CI52x with MRP as redundancy protocol
- Fast reaction and switchover nearly independent of the number of clusters
- Possibility of integrating other devices e.g. ABB drives into the redundancy scheme.

Scalable redundancy, where CPUs can also be placed far away from each other (...kilometers if fiber-optic networks are used).

Includes the AC500 Bulk Data Manager as a tool for efficient configuration and cluster engineering.
- Configuration and export of projects, clusters, modules/parameters, signal names, visualization ("code generation")

Application examples for fast engineering and startup.

Runtime license (Software is part of Automation Builder)		
All AC500 V3 CPUs	All AC500 V3 CPUs	All AC500 V2 and V3 CPUs

Automation Builder
Productivity features

Object-oriented programming of AC500 V3 CPUs
All essential features of standard object-oriented programming are included in Automation Builder's object-oriented programming:
- Better structured program code with “separation of concerns” and information hiding
- Flexible extensibility by new types of objects (e.g. software representations of new types of drives)
- Reuse of code for defining specialized sub-classes (inheritance), reuse of code operating on different implementations of an interface (polymorphism)
- New optimized editors for IEC programming languages
- Continuous Function Chart (CFC) with auto routing of connections between POUs, unrestricted definition and display of the execution order
- Structured Text (ST) with Support for quick editing with common help, such as grouping, collapsible tree structure, and indented brackets

HMI integration
Synchronization of connection settings and access to tags on the AC500 PLC.

Drive integration
Seamless integration of ABB Drives connected to AC500 PLCs:
- Common configuration of cyclic data exchange
- Access to the drive via the AC500 PLC - no need for point-to-point connections
- Upload, download and offline editing of drive parameters

Integrated configuration of AC500 software features
All required AC500 software features can be selected and configured by Automation Builder, e.g.
- KNX gateway for connecting to building automation devices
- IEC 60870 protocol for data exchange with substations
- Time synchronization via SNTP
- Shared variables with other AC500 PLCs

Professional version control – management of the application project
Professional Version Control is an integrated link to the version control system Subversion (SVN). End users can use this tool to manage independently both the complete IEC 61131-3 project version, as well as the individual application objects. End users benefit from automated management of the source code when developing a project in various teams or over a long period of time.

Automation Builder
Virtual Commissioning Platform – virtual system testing

Automation Builder 2.0 introduces virtual system testing which allows machine builders and system integrators to simulate and automate all kinds of applications with minimum effort. This gives seamless testing of the complete system at an early stage, even when all the necessary hardware is not yet ready. Even complex systems can be built up quickly and efficiently, ensuring smooth interaction of all the components.

Virtual Commissioning Technology builds on ABB's proven engineering tools RobotStudio and Automation Builder as basis for simulation. It lets you build simulation models from virtual devices and manage the virtual time and signal exchange between the virtual devices.

Virtual devices emulate real hardware. They function as real hardware, provide signals (onboard, local, fieldbus/remote IOs) and variables. Virtual time lets you control the execution of the simulation. Speed up, slow down or freeze the execution for testing and debugging.

Additional components can be included to these models. This allows to simulate the real system including physical inputs or actuators. The flexible architecture of the Virtual Commissioning Technology allows to extend your simulation to more advanced aspects, e.g. the dynamic system behavior.

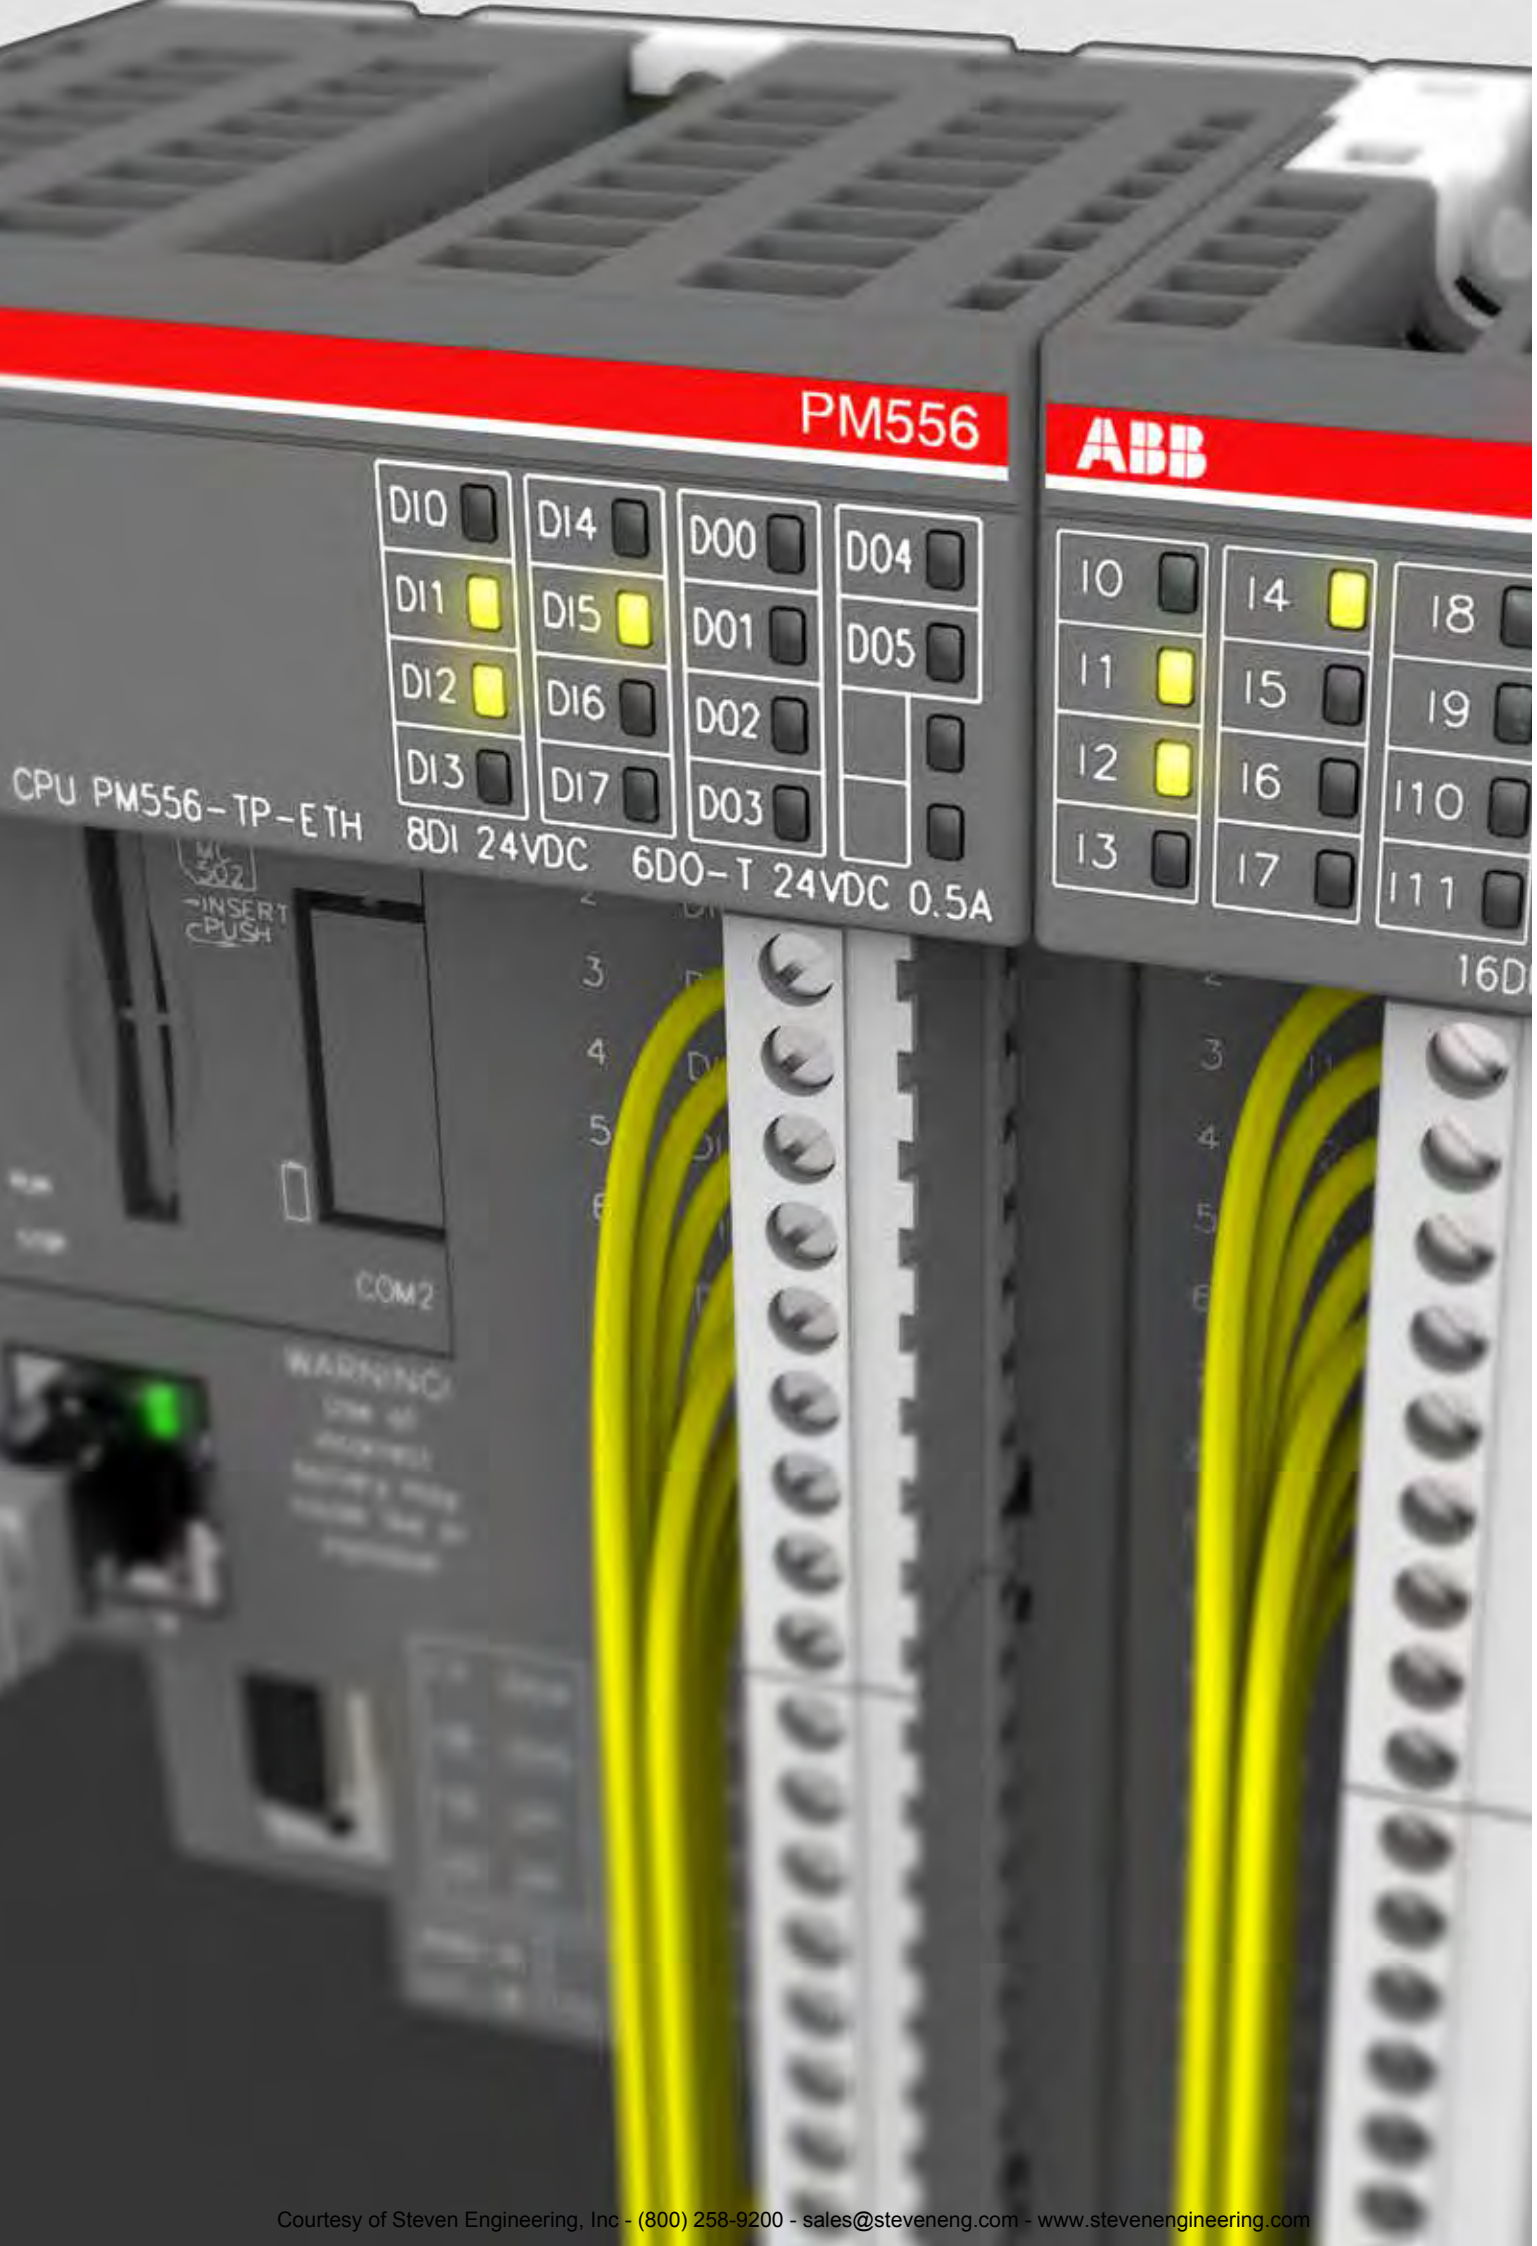
Virtual Commissioning Technology – Benefits

AC500-eCo
Entry level PLC solutions



AC500-eCo
Key features

—

High performance variant with large memory available

—

- Up to 10 I/O modules connected to the CPU
- Compatible with all standard I/O modules (S500 and S500-eCo)
- Digital I/O module with configurable I/O available

—

- Three different types of terminal blocks available
- Integrated onboard I/O
- AC versions with integrated power supply

—

Comprehensive communication options:

- Ethernet for communication and web server for user defined visualization
- Up to two serial ports for decentralized I/O and communication

AC500-eCo
Ordering data

AC500-eCo CPUs
- 1 RS485 serial interface (2nd is optional)
- Centrally expandable with up to 10 I/O modules (standard S500 and/or S500-eCo modules can be mixed)
- Optional SD card adapter for data storage and program backup
- Variants with integrated Ethernet (Ethernet includes web server)
- Minimum cycle time per instruction: Bit 0.08 µs, Word 0.1 µs, Float-point 1.2 µs.

AC500-eCo
Technical data

FM562 positioning module
The FM562 module contains Pulse Train Outputs for 2 axes. Profile generator for simple motion control tasks are integrated. The RS422 outputs allow a direct connection to Stepper- or Servo drives. Function blocks in PLCopen motion control style allow the integration of the module in an application. These function blocks are contained in the library PS552-MC-E.

Type		FM562
Functionality		
Number of axis		2
Digital inputs		2 digital inputs per axis Function: for axis enable or limit switch
Pulse outputs		Modes cw/ccw or pulse/direction Built in profile generators
Data of the digital inputs		
Signal voltage		24 V DC
Input current at 24 V DC		typically 5 mA
Potential isolation		by groups of 2
Data of pulse outputs		
Signal		RS422 (differential)
Frequency range		0...250 kHz
Potential isolation		RS422 outputs of both axes in one group isolated against the inputs, the process voltage and the PLC CPU logic
Maximum cable length for digital inputs		
Cable	shielded	500 m
	unshielded	300 m
Maximum cable length for pulse outputs		
Cable	shielded	300 m
	unshielded	30 m
Process voltage UP		
Nominal voltage		24 V DC
Current consumption on UP		typically 0.04 A
Reverse polarity protection		●
Potential isolation		
Per module		●
Voltage supply for the internal logic		From UP / ZP with isolation
Fieldbus connection		
Suitable communication interface module		CI501-PNIO, CI502-PNIO, CI504-PNIO, CI506-PNIO, CI541-DP, CI542-DP

	Frequency	50/60 Hz (-6 %, +4%)
Allowed interruptions of power supply	DC supply	Interruption < 10 ms, time between 2 interruptions > 1 s, PS2
	AC supply	Interruption < 0.5 periods, time between 2 interruptions > 1 s

Important: Exceeding the maximum process and supply voltages could lead to unrecoverable damage of the system. The system could be destroyed. For the supply of the modules, power supply units according to PELV or SELV specifications must be used. The creepage distances and clearances meet the requirements of the overvoltage category II, pollution degree 2.

Assembly position		
Horizontal	●	
Vertical	●	
Temperature		
Operating	0 °C ... +60 °C	Preferred mounting position horizontal. Other mounting positions see manual.
Storage / Transport	-40 °C ... +70 °C	
Humidity		
Operating / Storage		Max 95 % r. H. without condensation
Air pressure		
Operating		-1000 m ... 2000 m (1080 hPa ... 800 hPa)
Storage		<3500 m (>660 hPa)
Electromagnectic Compatibility		
Radiated emission (radio disturbances)		Yes, in accordance with CISPR 16-2-3
Conducted emission (radio disturbances)		Yes, in accordance with CISPR 16-2-1, CISPR 16-1-2
Electrostatic discharge (ESD)		Yes, in accordance with IEC 61000-4-2, zone B, criterion B
		Electrostatic voltage in case of air discharge: 8 kV
		Electrostatic voltage in case of contact discharge: 6 kV
Fast transient interference voltages (burst)		Yes, in accordance with IEC 61000-4-4, zone B, criterion B
		Supply voltage units (DC): 2 kV
		Supply voltage units (AC): 2 kV
		Digital inputs/outputs (24 V DC): 1 kV
		Digital inputs/outputs (100...240 V AC): 2 kV
		Analog inputs/outputs: 1 kV
		Communication lines shielded: 1 kV
		I/O supply (DC-out): 1 kV
High energy transient interference voltages (surge)		Yes, in accordance with IEC 61000-4-5, zone B, criterion B
		Supply voltage units (DC): 1 kV CM* / 0.5 kV DM*
		Supply voltage units (AC): 2 kV CM* / 1 kV DM*
		Digital inputs/outputs (24 V DC): 1 kV CM* / 0.5 kV DM*
		Digital inputs/outputs (100...240 V AC): 2 kV CM* / 1 kV DM*
		Analog inputs/outputs: 1 kV CM* / 0.5 kV DM*
		Communication lines shielded: 1 kV CM*
		I/O supply (DC-out): 0,5 kV CM* / 0.5 kV DM*
		* CM = Common Mode, * DM = Differential Mode
Influence of radiated disturbances		Yes, in accordance with IEC 61000-4-3, zone B, criterion A
		Test field strength: 10 V/m
Influence of line-conducted interferences		Yes, in accordance with IEC 61000-4-6, zone B, criterion A
		Test voltage: 10 V
Influence of power frequency magnetic fields		Yes, in accordance with IEC 61000-4-8, zone B, criterion A
		30 A/m 50 Hz
		30 A/m 60 Hz

WARNING!
Risk of malfunctions and damages to persons!
Unused slots for communication modules are not protected against contact discharge. Dust and Dirt may cause contact problems and malfunctions.
I/O-Bus connectors must not be touched during operation.
In order to prevent malfunctions, it is recommended that the operating personnel discharge themselves prior to touching communication connectors or perform other suitable measures to reduce effects of electrostatic discharges.

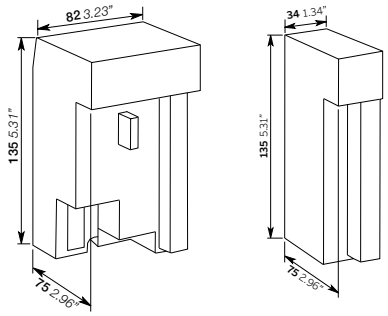
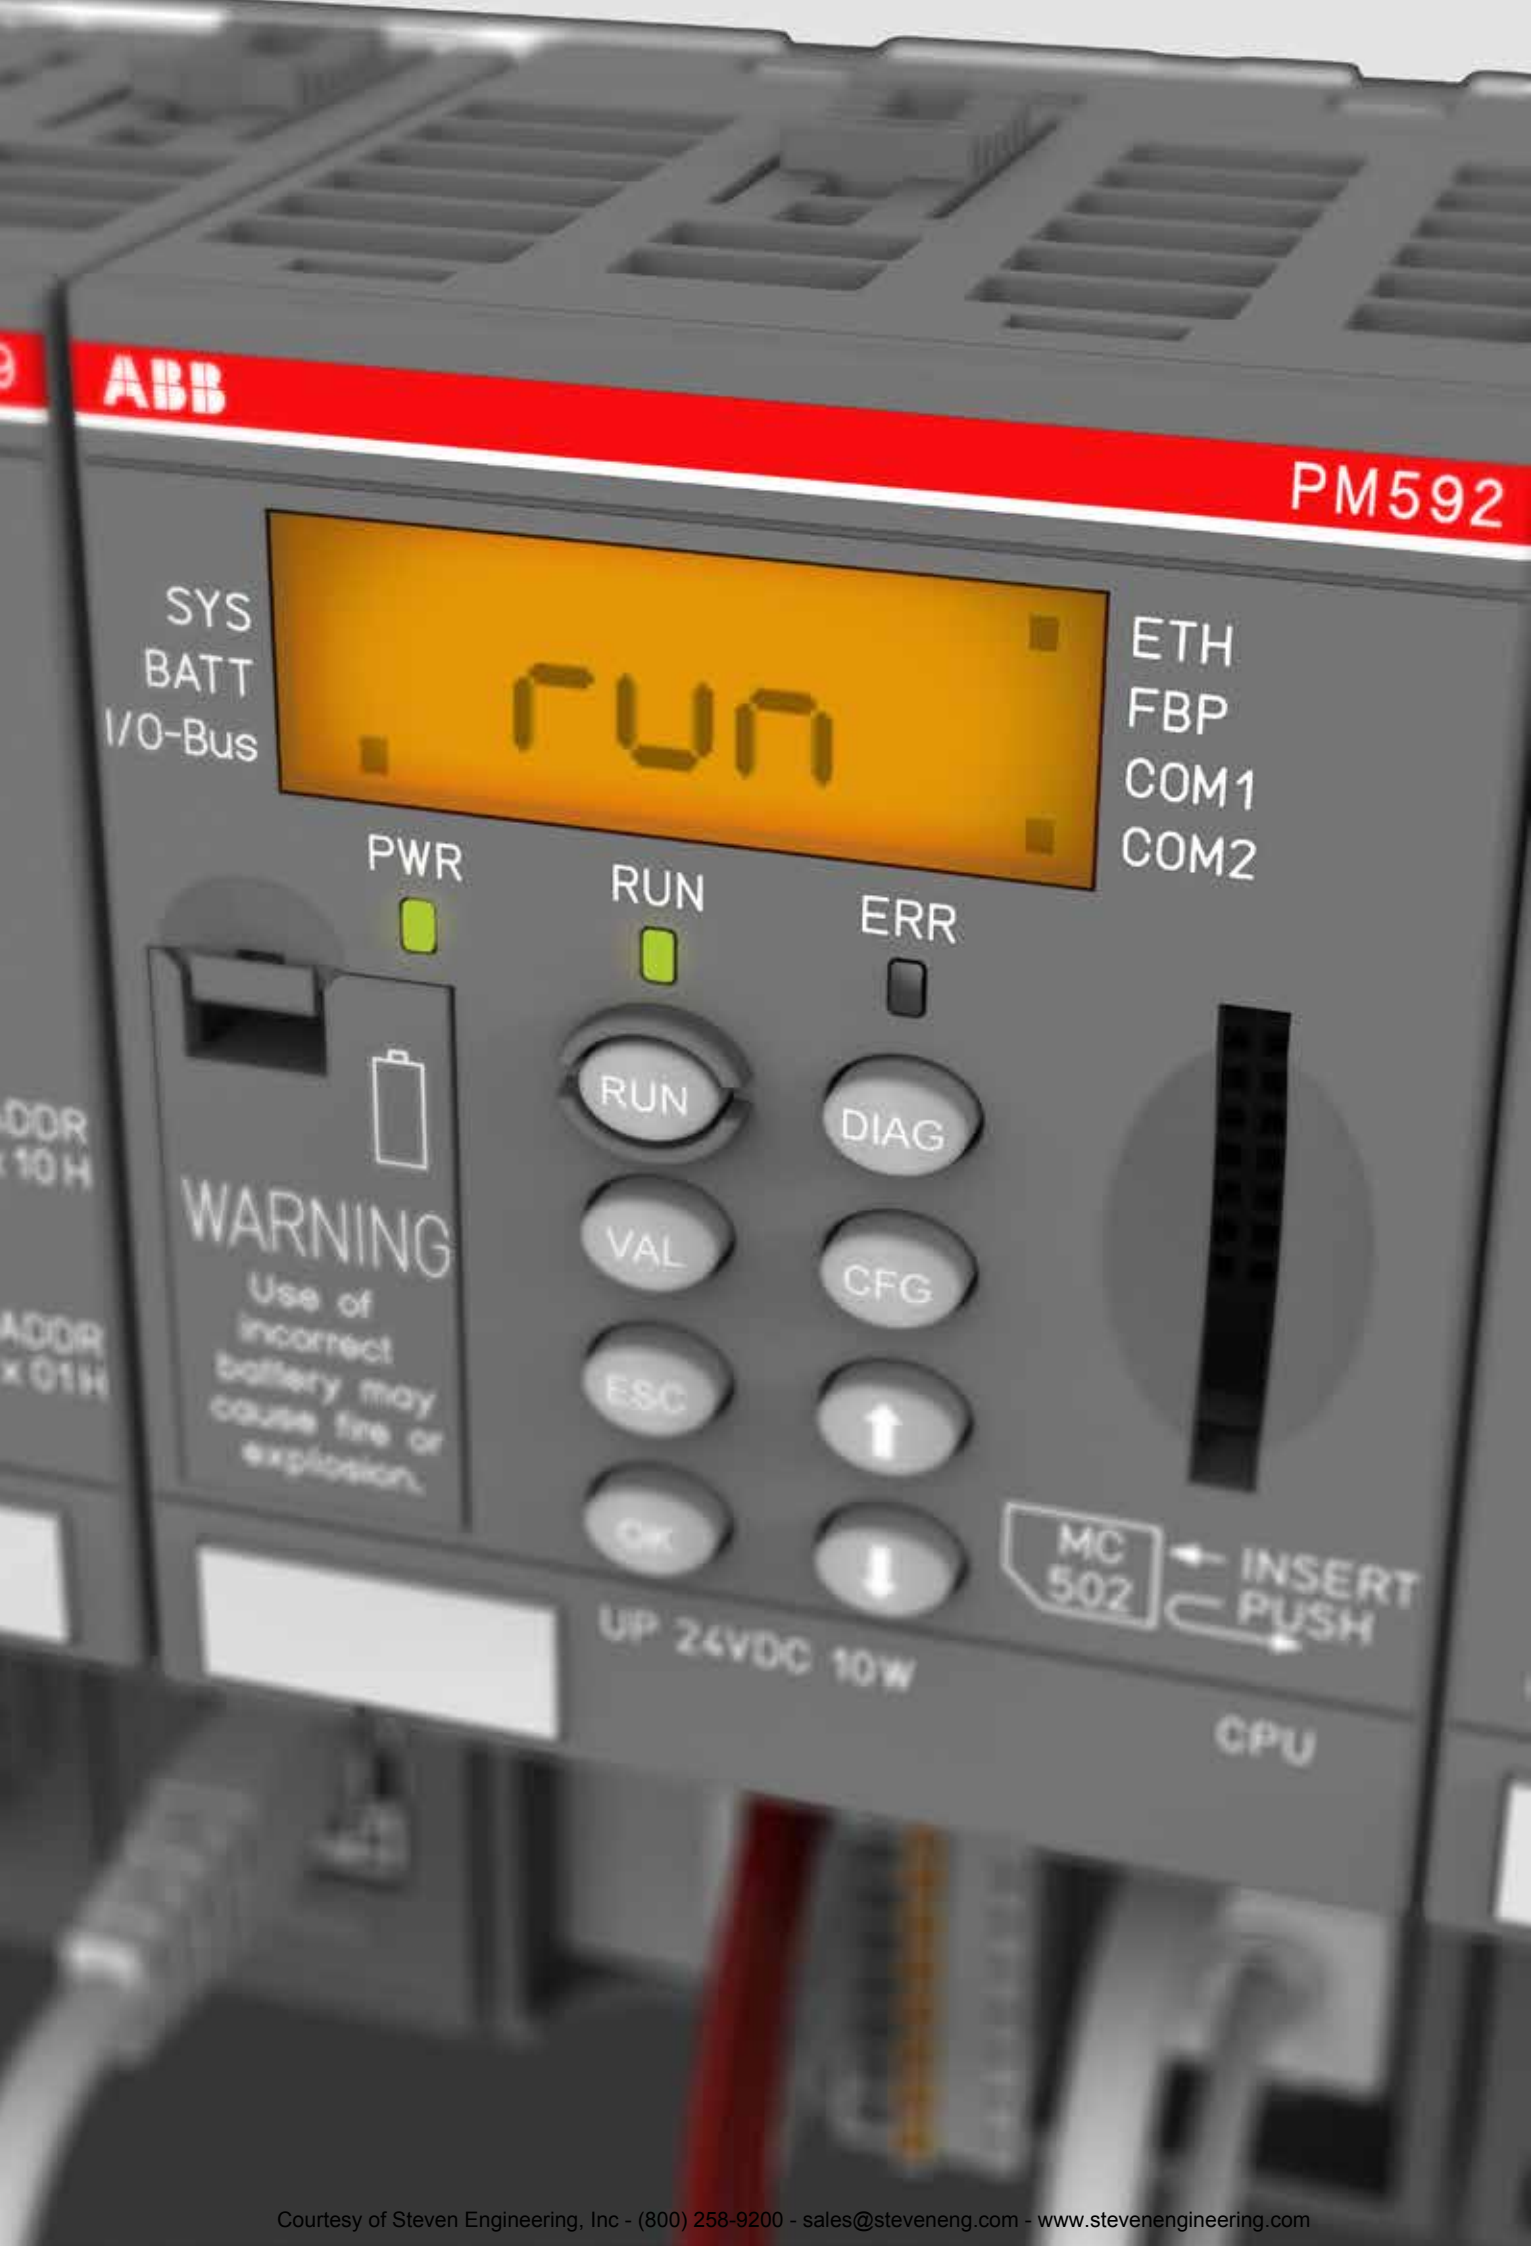
Environmental Conditions

Environmental Tests		
Storage		IEC 60068-2-1 Test Ab: cold withstand test -40 °C / 16 h
		IEC 60068-2-2 Test Bb: dry heat withstand test +70 °C / 16 h
Humidity		IEC 60068-2-30 Test Db: Cyclic (12 h / 12 h) Damp-Heat Test 55 °C, 93 % r. H. / 25 °C, 95 % r. H., 2 cycles
Vibration resistance		IEC 61131-2 / IEC 60068-2-6: 5 Hz ... 150 Hz, 1 g (with SD Memory Card inserted)
Shock resistance		IEC 60068-2-27: all 3 axes 15 g, 11 ms, half-sinusoidal
Mechanical Data		
Wiring method		Spring terminals / Screw terminals
Degree of protection		IP 20
Assembly on DIN rail	DIN rail type	According to IEC 60715
		35 mm, depth 7.5 mm or 15 mm
Assembly with screws	Screw diameter	4 mm
	Fastening torque	1.2 Nm

Main dimensions mm, inches



AC500
High performance modular PLC



AC500
Key features

—

A high performance PLC:
- Large memory up to 160 MB
- Highly modular
- From 8 to +80 000 I/Os
- More communication possibilities (Ethernet, Internet, PROFINET, PROFIBUS, Modbus, CANopen, EtherCAT, EthernetIP, OPC UA, OPC DA, IEC 60870-5-104, IEC61850, MQTT, ...)

—

Common AC500 platform benefits: Automation Builder engineering suite, I/O modules, scalable and flexible

—

- Eight programming languages available (five IEC61131-3, CFC, C-code and C++)
- Object oriented engineering
- Virtual controller
- Webvisu
- Data logging
- SD card for program back-up
- High Availability (HA) option
- Screw or spring terminal for I/Os
- Extensive programming libraries

AC500
Ordering data

AC500 CPUs

- 2 internal serial interfaces, RS232 / RS485 configurable
- Display and 8 function keys for diagnosis and status
- Centrally expandable with up to 10 I/O modules, 320 I/Os (S500 and/or S500-eCo modules allowed)
- Simultaneous operation of up to 4 external communication modules in any desired combination
- Optional SD card for data storage and program backup
- Can also be used as slave on PROFIBUS DP, CANopen or PROFINET IO using CM582-DP, CM588-CN, CM589-PNIO or CM589-PNIO-4 communication modules
- Ethernet version provides web server and IEC 60870-5-104 remote control protocol

AC500 Machine controller kits

- Complete product bundle providing all the needed devices for a machine controller delivered under one single order code

Program memory kB	Cycle time in µs per instruction min. Bit/Word/Float. point	Contents / Integrated communication	Type	Order code	Price	Weight (1 pce) kg
1024	0.004 / 0.008 / 0.008	PM585-ETH, CM579-ETHCAT, TB511-ETH Ethernet (1), 2 x serial, EtherCAT Master	PM585-MC-KIT	1SAP140500R0379		0.500
2048	0.002 / 0.004 / 0.004	PM590-ETH, CM579-ETHCAT, TB521-ETH, TA524 Ethernet (1), 2 x serial, EtherCAT Master	PM590-MC-KIT	1SAP150000R0379		0.500

(1) Provides integrated web server and IEC 60870-5-104 remote control protocol on each interface independently.
(2) Provides integrated 4 GB flashdisk for user data storage and data logging.
(3) Only to be used with dedicated terminal base TB523-2ETH.

PM572

PM592

PM585-MC-KIT

AC500
Ordering data

AC500 CPU PM595

- 2 Ethernet interfaces with integrated switch and software configurable protocol (PROFINET, EtherCAT or Ethernet e.g. Modbus TCP)
- 2 independent Ethernet interfaces for programming, online access, web server, Modbus TCP, IEC 60870-5-104 protocol e.g.
- 2 serial interfaces, RS232 / RS485 configurable
- Centrally expandable with up to 10 I/O modules (S500 and/or S500-eCo modules allowed)
- Simultaneous operation of up to 2 external communication modules in any desired combination, no need of additional terminal base

Program memory MB	Cycle time in µs per instruction min. Bit/Word/Float. point	Integrated communication	Type	Order code	Price	Weight (1 pce) kg
16	0.0006/0.001/0.001	2 x Ethernet for Fieldbus (2 Ports switch), 2 x Ethernet (1), 2 x serial	PM595-4ETH-F (2)	1SAP155500R0279		1.050

(1) Provides integrated web server and IEC 60870-5-104 remote control protocol on each interface independently.
(2) Provides integrated 4 GB flashdisk for user data storage and data logging.

PM595-4ETH-F

AC500
Ordering data

Terminal base
- For mounting and connection of the CPUs and communication modules, not needed for PM595
- 1 to 4 plug-in communication modules
- Connection for communication coupler integrated in the CPU
- I/O interface for direct connection of up to 10 expansion modules
- Fieldbus-neutral FieldBusPlug-Slave interface not for TB523-2ETH
- Connection COM1: 9-pole pluggable terminal block
- Connection COM2: D-Sub 9 (not for TB523-2ETH).

Number of coupler slots	Connection for coupler integrated in the CPU	Type	Order code	Price	Weight (1 pce) kg
1	ARCNET BNC	TB511-ARCNET (2)	1SAP111100R0260		0.215

AC500 Condition Monitoring CMS

- PLC integrated condition monitoring and fast protection for high frequency signals (vibration, current, voltage, speed/encoder)
- FM502-CMS module needs function module terminal base TF5x1 for direct interfacing to CPU, communication couplers, other I/O
  - for stand-alone or control/safety integrated condition monitoring
- PM592 CPU to be used on same TF5x1 for data storage and signal processing or communication
  - C-code interface for own complex diagnosis algorithmns, 4GB Flash disk for raw fingerprints and indicator trending
- FM502-CMS module:
  - 16 fast, precise analog inputs, all synchronously sampled; configurable as IEPE or +-10V
  - individual measurement configuration (start,stop,trigger) per channel
  - per channel up to 50ksamples/s and 24bit ADC resolution, adjustable sampling
  - encoder inputs (5V or 24V) up to 300kHz counter; 12 modes, incl. absloute SSI (1MHz)
  - fast data logging, compact WAV-Files delivered automatically to CPU, incl. synchronized encoder signal if configured
  - analogue values always available for fast protection in I/O image of CPU
- Included in Automation Builder: Configuration, libraries for CMS control and wav file handling, examples
- Available download package: Signal processing library, example programs with simple diagnosis, logging and automated triggering (2)

Accessories for AC500

For	Description	Type	Order code	Price	Weight (1 pce) kg
AC500 CPUs COM1	Programming cable Sub-D / terminal block, length 5 m	TK502	1SAP180200R0101		0.400
AC500 CPUs COM2	Programming cable Sub-D / Sub-D, length 5 m	TK501	1SAP180200R0001		0.400
AC500 CPUs	Memory card (2 GB SD card)	MC502	1SAP180100R0001		0.020
	Lithium battery for data buffering	TA521	1SAP180300R0001		0.100
I/O modules	Pluggable marker holder for I/O modules, packing unit incl. 10 pcs. Template available in the AC500 online help	TA523	1SAP180500R0001		0.300
AC500 CPU´s, interface module, communication module and I/O modules	White labels, packing unit incl.10 pcs.	TA525	1SAP180700R0001		0.100
Terminal base	Communication Module, blind cap	TA524	1SAP180600R0001		0.120
CPU terminal base	Accessories for screw mounting, packing unit includes 10 pcs	TA526	1SAP180800R0001		0.200
	5-pole power plug for AC500. Spare part. Can be plugged to CPU terminal base TB5x1. Packing unit includes 5 pcs	TA527	1SAP181100R0001		0.200
	9-pole COM1 plug for AC500. Spare part. Can be plugged to CPU terminal base TB5x1 or on TU520-ETH. Packing unit includes 5 pcs	TA528	1SAP181200R0001		0.200
Communication modules	9-pole spring plug for CM574-RS/RCOM. Spare part. Packing unit includes 10 pcs	TA532	1SAP182000R0001		
	5-pole spring plug for CM575-DN/CM578-CN. Spare part. Packing unit includes 5 pcs	TA533	1SAP182100R0001		
	2x5-pole spring plug for CM588-CN and CM598-CN. Spare part. Packing unit includes 5 pcs.	TA534	1SAP182200R0001		
	10-pole spring plug for DC541-CM. Spare part. Packing unit includes 10 pcs.	TA536	1SAP183100R0001

CD522 encoder module

The CD522 module offers accuracy and dynamic flexibility for a customized solution. It has two independent encoder inputs onboard and is easily configured using the Automation Builder software for 10 different operation modes and for frequencies up to 300 kHz (depending on CPU cycle time). The CD522 module also integrates outputs for pulses and for PWM as well as normal inputs and outputs, depending on selected encoder mode.

Type			CD522
Functionality			
Digital inputs/outputs			24 V DC, dedicated inputs/outputs can be used for specific counting functions. All unused inputs/outputs can be used as input/output with standard specification.
	Input options		Catch/Touch operation, counter value stored in separate variable on external event (rising or falling)
			Set to preset counter register with predefined value
			Set to reset counter register
	End value output		Output set when predefined value is reached
	Reference point initialization (RPI) input for relative encoder initialization		●
High-speed counter/encoder			
Integrated counters	Counter characteristics		2 counters (24 V DC, 5 V DC, differential and 1 Vpp sinus input)
	Counter mode		one 32 bits or two 16 bits
	Relative position encoder		X1, X2, X4
	Absolute SSI encoder		●
	Time frequency meter		●
	Frequency input		up to 300 kHz
PWM/pulse outputs			
Output mode specification	Number of outputs		2
	Push pull output		24 V DC, 100 mA max
	Current limitation		Thermal and overcurrent
PWM mode specification	Frequency		1…100 kHz
	Value		0...100 %
Pulse mode specification	Frequency		1…15 kHz
	Pulse emission		1…65535 pulses
	Number of pulses emitted indicator		0...100 %
Frequency mode specification	Frequency output		100 kHz
	Duty Cycle		Set to 50 %

AC500 Condition Monitoring CMS: FM502-CMS
The FM502-CMS function module offers precision and dynamic flexibility for customized solutions in condition monitoring, precise measurement or fast data logging applications. It has 16 fast, precise and synchronized analog inputs with 50k Samples/s (SPS), 24bit ADC resolution, completed with encoder inputs (incremental or absolute) with counter and additional DI and DC inputs/outputs onboard. It is easily configured using the Automation Builder software and the special libraries. Overall it has 12 different operation modes. One FM502 function module can be placed on the right side of PM592-ETH CPU with a special function module terminal base TF5x1, to interface directly to the CPU. While long measurements can be flexibly configured, started and stopped, all inputs are available in the I/O Image of CPU for immediate use (measurement, protection, control, ...)

Type	**FM502-CMS**	
Data storage		
Fast user data memory of FM502	128 MB (ca. 33 million Samples: e.g 40 s record length on 16 channels at 50k SPS or 5.8 h record lenght on 16 channels at 100 SPS or 93 h on 1 channel at 100 SPS)	
File Format delivered to PM592 flash	WAV (compact binary) per channel, all channels in one *.zip w. time stamp	
Analog inputs		
Number of channels	16 (synchronous sampled)	
Resolution	24 bit ADC, stored in DINT in WAV file (4byte per value)	
Accurracy at +25 °C	< +/- 0.1 %	
Accurracy over operating temperature and vibration	< +/- 0.5 %	
Sample rate / Bandwidth (High, 0 dB)	50k SPS / 20 kHz to 100 SPS / 40 Hz (digitally downsampled, selectable per channel)	
Indication of the input signal	One bicolor LED per channel for configuration, measurement status, error messages	
Input option:	**IEPE (with Sensor supply current)**	**+ - 10V**
Bandwidth low (- 3 dB)	digital < 0.1 Hz	digital < 0.1 Hz or DC (selectable)
Pass band high (- 3 dB)	analog > 90 kHz, digital > 24.5 kHz	
Stop band high (> - 100 dB)	analog > 1 MHz, digital > 27.5 kHz	
Dynamic Range (SFDR)	> 100 dB	
SINAD (300 Hz/1 kHz sine, 50 k SPS) 0dB from full scale	< -90 dB	< - 95 dB
IEPE Current Source per channel	Typ. 4.2 mA (+/- 7% over temperature)	(n.a.)
Resistance AI- to M (ground)	Typ ~ 27Ohm (PTC)	
Channel input impedance (AI+/AI-):		
< 1kHz	> 1 MOhm	> 2 MOhm
5kHz	> 100 kOhm	> 40 kOhm
10kHz	> 60 kOhm	> 25 kOhm
20kHz	> 40 kOhm	> 8 kOhm
Error detection	Short circuit, open wire	
Max. cable length, shielded (depending on sensor)	100 m	
Digital inputs/outputs		
	24 V DC, dedicated inputs/outputs can be used for specific counting functions.	
	All unused inputs/outputs can be used as normal input/output with standard specification.	
Channels and types	2 DI + 2 DC (configurable inputs/outputs); Type 1, LED indication	
Input options	Catch/Touch operation, counter value stored in separate variable on external event (rising or falling)	
	Set to preset counter register with predefined value	
	Set to reset counter register	
End value output	Output set when predefined value is reached	
Reference point initialization (RPI) input for relative encoder initialization	•	
Input current p. channel @ V DC		
24 V DC	Typically 5 mA	
5 V DC	> 1 mA	
15 V DC	> 5 mA	
30 V DC	< 8 mA	

AC500
Technical data

Type	FM502-CMS	
Digital outputs		
Output voltage at signal state 1	(L+) – 0.8 V	
Output current		
Nominal current per channel	0.5 A	
Residual current at signal state 0	< 0.5 mA	
Demagnetization when switching off inductive loads	By internal varistors	
Switching frequency		
For inductive load	Max. 0.5 Hz	
For lamp load	Max. 11 Hz with max. 5 W	
Short-circuit / Overload proofness	●	
Overload indication (I > 0.7 A)	After approx. 100 ms	
Output current limiting	●	
Resistance against reverse feeding of 24 V signals	●	
Maximum cable length for connected process signals		
shielded	1000 m	
unshielded	600 m	
High-speed counter/encoder		
Integrated counters		
Counter characteristics	2 counters (24 V DC, 5 V DC, differential RS422: 5 V or 1 Vpp sinus input)	
Counter mode	one counter 32 bits or two counters 16 bits	
Relative position encoder	X1, X2, X3	
Absolute SSI encoder	●	
Time frequency meter	●	
Frequency input	up to 300 kHz	
Additional configuration of channels as		
Fast counter	Integrated 2 counter encoders	
high-speed inputs		
Number of channels, type per module	3 (A,B,Z), type 1	
Input type	24 V DC	5 V DC / Differential / Sinus 1 Vpp
Frequency	up to 300 kHz (input filter: 50,500, 5 k, 20 k Hz)	
Input frequency max. (frequency measurement only)	100 kHz (accuracy -0 %/+3 %)	
Max. cable length, shielded (depending on sensor)	300 m	100 m
Fast outputs		
SSI CLK output B	f. optical Interface (according SSI): Pin 1.3	RS-422 differential (according SSI) Pins 1.3, 1.4
Output delay (0->1 or 1->0)	Max. 0.35 µs	
Output current	≤ 10 mA	
Switching frequency (selectable)	200 kHz, 500 kHz and 1 MHz	
Short-circuit proof / overload proof	Yes	
Output current limitation	Yes, automatic reactivation after short-circuit/overload	
Resistance to feedback against 24V signals	Yes	
Resistance to feedback against reverse polarity	Yes	
Max. cable length, shielded (depending on sensor)	100 m	
Process voltage L+		
Nominal voltage	24 V DC	
Current consumption from L+ (FM502 and PM592, no communication module)	Max. 0.43 A + max. 0.5 A per output	
Inrush current from L+ (at power up, FM502 and PM592, no communication module)	1.2 A^2s	
Electrical isolation	Yes, (PM592 and FM502 to other I/O-Bus modules)	
Max. power dissipation within the FM502 module	6.5 W (outputs unloaded)	
5-V-encoder supply output		
Nominal voltage	5 V DC (+/- 5%), 100 mA max.

Communication interface modules

For all modules: max cable length for connected process signals is 1000 m for shielded cable and 600 m for unshielded ones. For all Input modules, the signal resolution for channel configuration is: -10…+10 V: 12 bits + sign; 0…10 V, 0…20 mA, 4…20 mA: 12 bits. Temperature: 0.1 °C.

Type			DC551-CS31	CI590-CS31-HA (1)	CI592-CS31
Communication Interface					
Protocol			Proprietary CS31 bus protocol on RS485 interface		
ID configuration			Per rotary switches on front face from 00d to 99d		
Field bus connection on terminal units			CS31 field bus, via terminal / redundant for CI590-CS31-HA on TU551-CS31 or TU552-CS31		
Number of Channels per Module					
Digital		inputs	8	–	8
		outputs	–	–	–
Analog		inputs	–	–	4
		outputs	–	–	2
Digital configurable channels DC (configurable as inputs or outputs)			16	16	8
Additional configuration of channels as					
Fast counter			Configuration of max. 2 channels per module		
Occupies max. 1 DO or DC when used as counter			●	●	●
Connection					
Via terminal unit TU5xx			●	●	●
Local I/O extension					
Max. number of extension modules			max. 7 x S500 extension modules (standard or eCo), up to 31 stations with up to 120 DIs/120 DOs or up to 32 AIs/32AOs per station		
				not for S500-eCo I/O modules	
Digital inputs					
Input	signal voltage		24 V DC		
	characteristic acc. to EN 61132-2		Type 1		
0 signal			-3...+5 V DC		
Undefined signal state			5...15 V DC		
1 signal			15...30 V DC		
Residual ripple, range for		0 signal	-3...+5 V DC		
		1 signal	15...30 V DC		
Input time delay (0 -> 1 or 1 -> 0)			8 ms typically, configurable from 0.1 up to 32 ms		
Digital outputs					
Transistor outputs 24 V DC, 0.5 A			●		
Readback of output			●		
Outputs, supplied via process voltage UP			●		
Switching of 24 V load			●		
Output voltage at signal state 1			Process voltage UP - 0.8 V		
Output current					
Nominal current per channel			0.5 A		
Maximum (total current of all channels)			8 A	8 A	4 A
Residual current at signal state 0			< 0.5 mA		
Demagnetization when switching off inductive loads			By internal varistors		
Analog inputs AI			Max. number per module and with regard to the configuration: AIs / Measuring points		
Signal configuration per AI			–		●
0…10 V / -10…+10 V			–		4 / 4
0…20 mA / 4…20 mA			–		4 / 4

Modbus TCP modules

Type			CI521-MODTCP	CI522-MODTCP
Communication interface				
Ethernet Interface				
Main protocol			Modbus TCP	
ID Device configuration			By rotary switch on the front side, from 00h to FFh	
Ethernet connection on terminal units			2 x RJ45 with switch functionality for simple daisy chain on TU507-ETH or TU508-ETH	
Number of channels per module				
Digital		inputs	8	8
		outputs	8	8
Analog		inputs	4	–
		outputs	2	–
Digital configurable channels DC (configurable as inputs or outputs)			–	8
Additional configuration of channels as				
Fast counter (onboard I/O)			Configuration of max. 2 DI channels per module	
Occupies max. 1 DO or DC when used as counter			●	
Connection				
Local I/O extension			●	
Max. number of extension modules			max. 10 x S500 extension modules (standard or eCo modules allowed). Fast counter from digital IO modules can be also used.	
Via terminal unit TU5xx			●	●
Digital inputs				
Input	signal voltage		24 V DC	
	characteristic acc. to EN 61132-2		Type 1	
0 signal			-3...+5 V DC	
Undefined signal state			5...15 V DC	
1 signal			15...30 V DC	
Residual ripple, range for		0 signal	-3...+5 V DC	
		1 signal	15...30 V DC	
Input time delay (0 -> 1 or 1 -> 0)			8 ms typically, configurable from 0.1 up to 32 ms	
Digital outputs				
Transistor outputs 24 V DC, 0.5 A			●	
Readback of output			–	● (on DC outputs)
Outputs, supplied via process voltage UP			●	
Switching of 24 V load			●	
Output voltage at signal state 1			Process voltage UP - 0.8 V	
Output current				
Nominal current per channel			500 mA at UP = 24 V DC	
Maximum (total current of all channels)			8 A	
Residual current at signal state 0			< 0.5 mA	
Demagnetization when switching off inductive loads			By internal varistors	
Analog inputs AI			Max. number per module and with regard to the configuration: AIs / Measuring points	
Signal configuration per AI			4	–
0...10 V / -10... +10 V			4 / 4	–

CS31 functionality

	AC500 CPU with integrated CS31 interface	S500 I/O with communication interface DC551-CS31 CI590-CS31-HA CI592-CS31
Master	Yes, at COM1	–
Slave	No	Yes / Redundant for CI590-CS31-HA
Protocols supported	ABB CS31 protocol	
Diagnosis		
Error indication	On LCD display of the CPU / AC500-eCo error LED	Via module LEDs
Online diagnosis	Yes	
Error code	Errors are recorded in the diagnosis system of the CPU	
Associated function blocks	Yes	
Physical layer	RS485 / 2 x RS485 for CI590-CS31-HA for redundancy	
Connection	Plug at COM1	Screw-type or spring-type terminals
Baud rate	187.5 kbit/s	
Distance	AC500-eCo: up to 50 m and up to 500 m using the isolator TK506 / AC500: up to 500 m; up to 2000 m using a repeater	
Max. number of modules on fieldbus	31 modules max. Please note: The CS31 bus interface occupies one or two module addresses (if counters are configured onboard or if the module is a mixed digital analog module). Depending on the configuration, or if the module contains also mixed digital analog I/O, connected extension modules can occupy further module addresses.	
Configuration	Using configuration tool (included in Automation Builder software suite)	
Station address configuration	No	Using rotary switches (99 max.)

Digital and mixed signal I/O modules, "Fast Counter" operating modes. Not applicable for DC541 or eCo-I/O modules (1)

Operating mode, configured in the user program of the AC500		Occupied inputs DI or DC	Occupied outputs DO or DC	Maximum counting frequency kHz
0	No counter	0	0	–
1	One count-up counter with "end value reached" indication	1	1	50
2	One count-up counter with "enable" input and "end value reached" indication	2	1	50
3	Two up/down counters	2	0	50
4	Two up/down counters with 1 counting input inverted	2	0	50
5	One up/down counter with "dynamic set" input	2	0	50
6	One up/down counter with "dynamic set" input	2	0	50
7	One up/down counter with directional discriminator For synchro transmitters using two counting pulses with an offset of 90° (track A and B)	2	0	50
8	–	0	0	–
9	One up/down counter with directional discriminator and double evaluation For synchro transmitters using two counting pulses with an offset of 90° towards each other (track A and B)	2	0	30
10	One up/down counter with directional discriminator and fourfold evaluation For synchro transmitters using two counting pulses with an offset of 90° towards each other (track A and B)	2	0	15

(1) See technical documentation for details.

AC500
System data

Environmental Conditions

Process and supply voltages		
24 V DC	Voltage	24 V (-15%, +20%)
	Protection against reverse polarity	yes
Allowed interruptions of power supply	DC supply	Interruption < 10 ms, time between 2 interruptions > 1 s, PS2

Important: Exceeding the maximum process and supply voltages could lead to unrecoverable damage of the system. The system could be destroyed. For the supply of the modules, power supply units according to PELV or SELV specifications must be used. The creepage distances and clearances meet the requirements of the overvoltage category II, pollution degree 2.

Assembly position		
Horizontal	●	
Vertical	●	
Temperature		
Operating	0 °C ... +60 °C	Preferred mounting position horizontal. Other mounting positions see manual.
Storage / Transport	-40 °C ... +70 °C	
Humidity		
Operating / Storage		Max 95 % r. H. without condensation
Air pressure		
Operating		-1000 m ... 2000 m (1080 hPa ... 800 hPa)
Storage		<3500 m (>660 hPa)
Electromagnectic Compatibility		
Radiated emission (radio disturbances)		Yes, Yes, in accordance with CISPR 16-2-3
Conducted emission (radio disturbances)		Yes, Yes, in accordance with CISPR 16-2-1, CISPR 16-1-2
Electrostatic discharge (ESD)		Yes, in accordance with IEC 61000-4-2, zone B, criterion B
		Electrostatic voltage in case of air discharge: 8 kV
		Electrostatic voltage in case of contact discharge: 6 kV
Fast transient interference voltages (burst)		Yes, in accordance with IEC 61000-4-4, zone B, criterion B
		Supply voltage units (DC): 2 kV
		Supply voltage units (AC): 2 kV
		Digital inputs/outputs (24 V DC): 1 kV
		Digital inputs/outputs (120...240 V AC): 2 kV
		Analog inputs/outputs: 1 kV
		Communication lines shielded: 1 kV
		I/O supply (DC-out): 2 kV
High energy transient interference voltages (surge)		Yes, in accordance with IEC 61000-4-5, zone B, criterion B
		Supply voltage units (DC): 1 kV CM* / 0.5 kV DM*
		Supply voltage units (AC): 2 kV CM* / 1 kV DM*
		Digital inputs/outputs (24 V DC): 1 kV CM* / 0.5 kV DM*
		Digital inputs/outputs (120...240 V AC): 2 kV CM* / 1 kV DM*
		Analog inputs/outputs: 1 kV CM* / 0.5 kV DM*
		Communication lines shielded: 1 kV CM*
		I/O supply (DC-out): 0,5 kV CM* / 0.5 kV DM*
		* CM = Common Mode, * DM = Differential Mode
Influence of radiated disturbances		Yes, in accordance with IEC 61000-4-3, zone B, criterion A
		Test field strength: 10 V/m
Influence of line-conducted interferences		Yes, in accordance with IEC 61000-4-6, zone B, criterion A
		Test voltage: 10 V
Influence of power frequency magnetic fields		Yes, in accordance with IEC 61000-4-8, zone B, criterion A
		30 A/m 50 Hz
		30 A/m 60 Hz

WARNING!
Risk of malfunctions and damages to persons!
Unused slots for communication modules are not protected against contact discharge. Dust and Dirt may cause contact problems and malfunctions.
Unused slots for Communication Modules must be covered with Dummy Communication Modules ("TA524 - Dummy Communication Module").
I/O-Bus connectors must not be touched during operation.
In order to prevent malfunctions, it is recommended that the operating personnel discharge themselves prior to touching communication connectors or perform other suitable measures to reduce effects of electrostatic discharges.

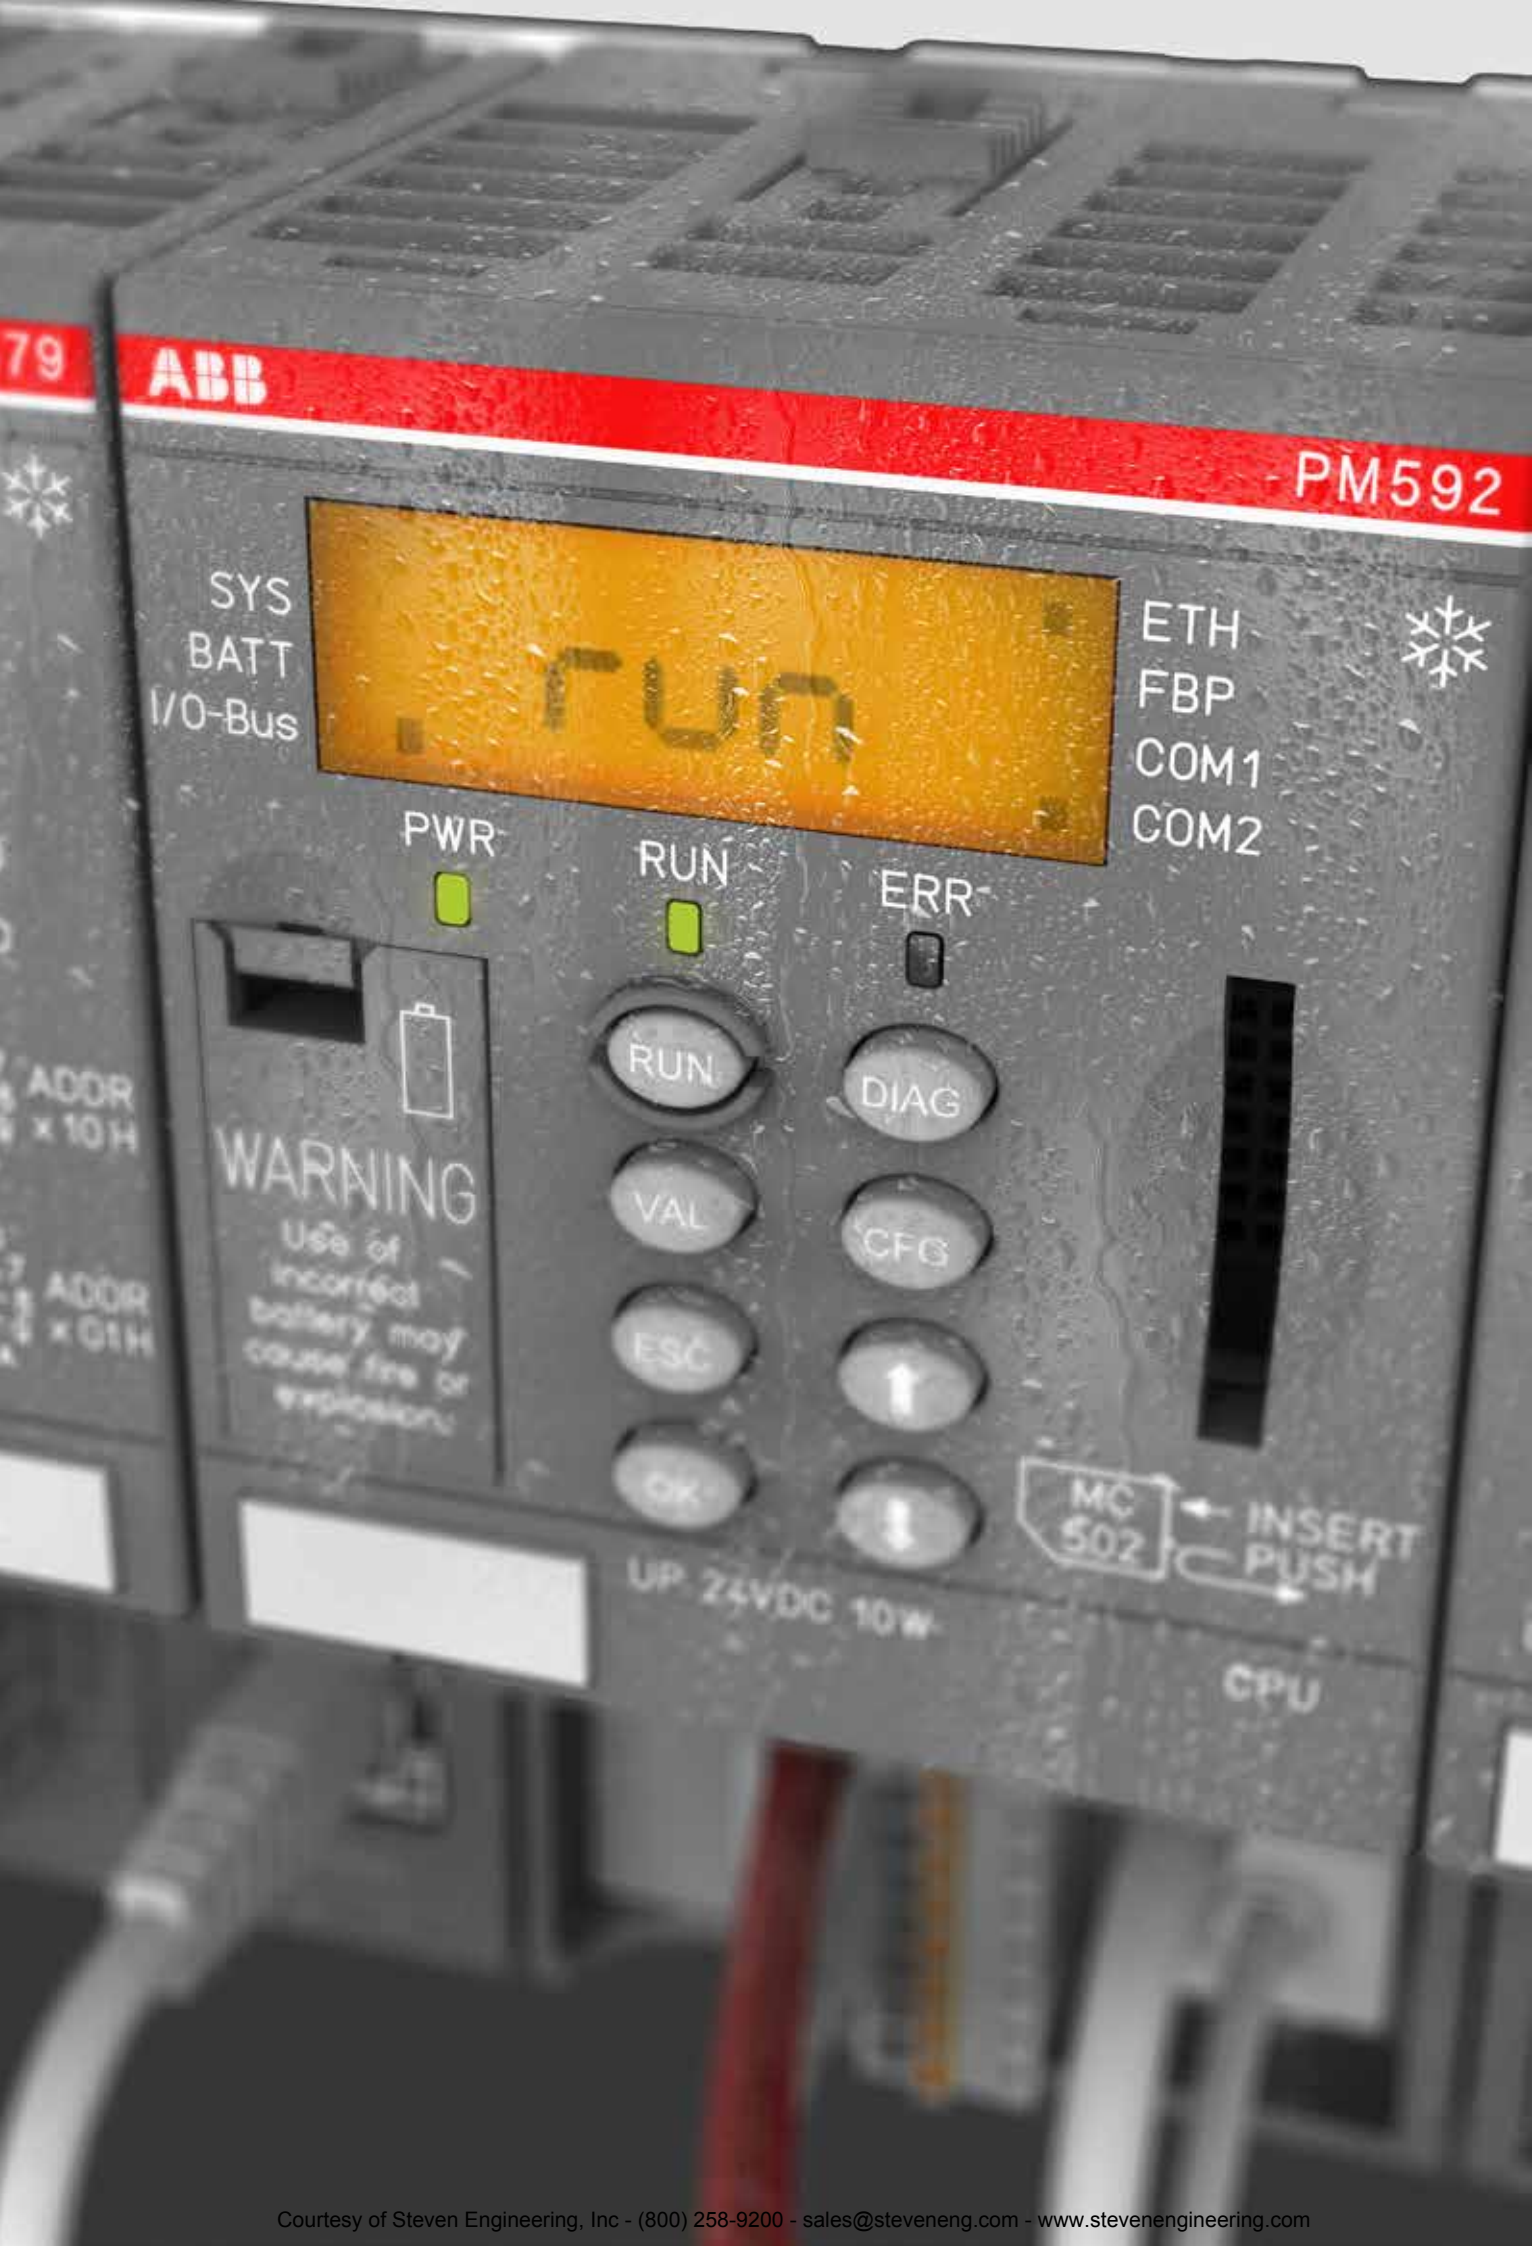
AC500-XC
PLC operating in eXtreme Conditions



AC500-XC
Key features

—

Lower lifetime cost and many of the traditional practices are not required, such as: HVAC for the panel, shock absorbers, door sealing, etc...

—

Resistance to:
- High humidity
- Salt mist
- Vibration
- High altitude
- Corrosive gases
- Temperature: from -40 to +70 °C

—

All the benefits from AC500 range: Automation Builder engineering suite, I/O modules, scalable and flexible, same high performance communication, libraries and web services

AC500-XC

Ordering data

AC500 CPUs

- 2 internal serial interfaces, RS232 / RS485 configurable
- Display and 8 function keys for diagnosis and status
- Centrally expandable with up to 10 I/O modules (S500) for a total of 320 Digital I/Os or 160 Analog I/Os
- Simultaneous operation of up to 4 external communication modules in any desired combination
- Optional SD card for data storage and program backup
- Can also be used as slave for PROFIBUS DP, CANopen or PROFINET IO using CM582-DP-XC, CM588-CN-XC, CM589-PNIO-XC or CM589-PNIO-4-XC communication modules
- Ethernet version provides web server and IEC 60870-5-104 remote control protocol.

AC500 Condition Monitoring CMS-XC

- PLC integrated condition monitoring and fast protection for high frequency signals (vibration, current , voltage, speed/encoder)
- FM502-CMS module needs function module terminal base TF5x1 for direct interfacing to CPU, communication couplers, other I/O
  - for stand-alone or control/safety integrated condition monitoring
- PM592 CPU to be used on same TF5x1 for data storage and signal processing or communication
  - C-code interface for own complex diagnosis algorithmns, 4GB Flash disk for raw fingerprints and indicator trending
- FM502-CMS module:
  - 16 fast, precise analog inputs, all synchronously sampled; configurable as IEPE or +-10V
  - individual measurement configuration (start,stop,trigger) per channel
  - per channel up to 50ksamples/s and 24bit ADC resolution, adjustable sampling
  - encoder inputs (5V or 24V) up to 300kHz counter; 12 modes, incl. absloute SSI (1MHz)
  - fast data logging, compact WAV-Files delivered automatically to CPU, incl. synchronized encoder signal if configured
  - analogue values always available for fast protection in I/O image of CPU
- Included in Automation Builder: Configuration, libraries for CMS control and wav file handling, examples
- Available download package: Signal processing library, example programs with simple diagnosis, logging and automated triggering (2)

CM579-PNIO-XC

I/O modules

- For central expansion of the AC500-XC CPU
- For decentralized expansion in combination with communication interface module (not for DC505-FBP)
- DC and AC: channels can be configured individually as inputs or outputs
- Terminal unit required (refer to table below).

Digital I/O

Number of DI/DO/DC	Input signal	Output type	Output signal	Terminal units	Type	Order code	Price	Weight (1 pce) kg
32 / - / -	24 V DC	-	-	TU516-XC	DI524-XC	1SAP440000R0001		0.200

CD522-XC encoder module

The CD522-XC module offers accuracy and dynamic flexibility for a customized solution. It has two independent encoder inputs onboard and is easily configured using the Automation Builder software for 10 different operation modes and for frequencies up to 300 kHz (depending on CPU cycle time). The CD522-XC module also integrates outputs for pulses and for PWM as well as normal inputs and outputs, depending on selected encoder mode.

Type			CD522-XC
Functionality			
Digital inputs/outputs			24 V DC, dedicated inputs/outputs can be used for specific counting functions. All unused inputs/outputs can be used as input/output with standard specification.
	Input options		Catch/Touch operation, counter value stored in separate variable on external event (rising or falling)
			Set to preset counter register with predefined value
			Set to reset counter register
	End value output		Output set when predefined value is reached
	Reference point initialization (RPI) input for relative encoder initialization		●
High-speed counter/encoder			
Integrated counters	Counter characteristics		2 counters (24 V DC, 5 V DC, differential and 1 Vpp sinus input)
	Counter mode		one 32 bits or two 16 bits
	Relative position encoder		X1, X2, X3
	Absolute SSI encoder		●
	Time frequency meter		●
	Frequency input		up to 300 kHz
PWM/pulse outputs			
Output mode specification	Number of outputs		2
	Push pull output		24 V DC, 100 mA max
	Current limitation		Thermal and overcurrent
PWM mode specification	Frequency		1…100 kHz
	Value		0...100 %
Pulse mode specification	Frequency		1…15 kHz
	Pulse emission		1…65535 pulses
	Number of pulses emitted indicator		0...100 %
Frequency mode specification	Frequency output		100 kHz
	Duty Cycle		Set to 50 %
Number of channels per module			
Digital	input		2
	output		2
Configurable channels DC (configurable as inputs or outputs)			8
Additional configuration of channels as			
Fast counter			Integrated 2 counter encoders
Connection via terminal unit			●
Digital Inputs			
Input	signal voltage		24 V DC
	time delay		8 ms typically configurable from 0.1 up to 32 ms
Input current per channel			
At input voltage		24 V DC	Typically 5 mA
		5 V DC	> 1 mA
		15 V DC	> 5 mA
		30 V DC	< 8 mA

AC500 Condition Monitoring CMS: FM502-CMS-XC

The FM502-CMS-XC function module offers precision and dynamic flexibility for customized solutions in condition monitoring, precise measurement or fast data logging applications. It has 16 fast, precise and synchronized analog inputs with 50k Samples/s (SPS), 24bit ADC resolution, completed with encoder inputs (incremental or absolute) with counter and additional DI and DC inputs/outputs on-board. It is easily configured using the Automation Builder software and the special libraries. Overall it has 12 different operation modes. One FM502 function module can be placed on the right side of PM592-ETH-XC CPU with a special function module terminal base TF5x1, to interface directly to the CPU. While long measurements can be flexibly configured, started and stopped, all inputs are available in the I/O Image of CPU for immediate use (measurement, protection, control, ...)

Type	**FM502-CMS-XC**	
Data storage		
Fast user data memory of FM502	128 MB (ca. 33 million Samples: e.g 40 s record length on 16 channels at 50k SPS or 5.8 h record lenght on 16 channels at 100 SPS)	
File Format delivered to PM592 flash	WAV (compact binary) per channel, all channels in one *.zip w. time stamp	
Analog inputs		
Number of channels	16 (synchronous sampled)	
Resolution	24 bit ADC, stored in DINT in WAV file (4byte per value)	
Accurracy at +25 °C	< +/- 0.1 %	
Accurracy over operating temperature and vibration	< +/- 0.5 %	
Sample rate / Bandwidth (High, 0 dB)	50k SPS / 20 kHz to 100 SPS / 40 Hz (digitally downsampled, selectable per channel)	
Indication of the input signal	One bicolor LED per channel for configuration, measurement status, error messages	
Input option:	**IEPE (with Sensor supply current)**	**+ - 10V**
Bandwidth low (- 3 dB)	digital < 0.1 Hz	digital < 0.1 Hz or DC (selectable)
Pass band high (- 3 dB)	analog > 90 kHz, digital > 24.5 kHz	
Stop band high (> - 100 dB)	analog > 1 MHz, digital > 27.5 kHz	
Dynamic Range (SFDR)	> 100 dB	
SINAD (300 Hz/1 kHz sine, 50 k SPS) 0dB from full scale	< -90 dB	< - 95 dB
IEPE Current Source per channel	Typ. 4.2 mA (+/- 7% over temperature)	(n.a.)
Resistance AI- to M (ground)	Typ ~ 27Ohm (PTC)	
Channel input impedance (AI+/AI-):		
< 1 kHz	> 1 MOhm	> 2 MOhm
5 kHz	> 100 kOhm	> 40 kOhm
10 kHz	> 60 kOhm	> 25 kOhm
20 kHz	> 40 kOhm	> 8 kOhm
Error detection	Short circuit, open wire	
Max. cable length, shielded (depending on sensor)	100 m	
Digital inputs/outputs		
	24 V DC, dedicated inputs/outputs can be used for specific counting functions.	
	All unused inputs/outputs can be used as normal input/output with standard specification.	
Channels and types	2 DI + 2 DC (configurable inputs/outputs); Type 1, LED indication	
Input options	Catch/Touch operation, counter value stored in separate variable on external event (rising or falling)	
	Set to preset counter register with predefined value	
	Set to reset counter register	
End value output	Output set when predefined value is reached	
Reference point initialization (RPI) input for relative encoder initialization	●	
Input current p. channel @ V DC		
24 V DC	Typically 5 mA	
5 V DC	> 1 mA	
15 V DC	> 5 mA	
30 V DC	< 8 mA	

AC500-XC
Technical data

AC500 Condition Monitoring CMS: FM502-CMS-XC

Type	FM502-CMS-XC	
Digital outputs		
Output voltage at signal state 1	(L+) – 0.8 V	
Output current		
Nominal current per channel	0.5 A at UP = 24 V	
Residual current at signal state 0	< 0.5 mA	
Demagnetization when switching off inductive loads	By internal varistors	
Switching frequency		
For inductive load	Max. 0.5 Hz	
For lamp load	Max. 11 Hz with max. 5 W	
Short-circuit / Overload proofness	●	
Overload indication (I > 0.7 A)	After approx. 100 ms	
Output current limiting	●	
Resistance against reverse feeding of 24 V signals	●	
Maximum cable length for connected process signals		
shielded	1000 m	
unshielded	600 m	
High-speed counter/encoder		
Integrated counters		
Counter characteristics	2 counters (24 V DC, 5 V DC, differential RS422: 5 V or 1 Vpp sinus input)	
Counter mode	one counter 32 bits or two counters 16 bits	
Relative position encoder	X1, X2, X3	
Absolute SSI encoder	●	
Time frequency meter	●	
Frequency input	up to 300 kHz	
Additional configuration of channels as		
Fast counter	Integrated 2 counter encoders	
high-speed inputs		
Number of channels, type per module	3 (A,B,Z), type 1	
Input type	24 V DC	5 V DC / Differential / Sinus 1 Vpp
Frequency	up to 300 kHz (input filter: 50,500, 5 k, 20 k Hz)	
Input frequency max. (frequency measurement only)	100 kHz (accuracy -0 %/+3 %)	
Max. cable length, shielded (depending on sensor)	300 m	100 m
Fast outputs		
SSI CLK output B	f. optical Interface (according SSI): Pin 1.3	RS-422 differential (according SSI) Pins 1.3, 1.4
Output delay (0->1 or 1->0)	Max. 0.35 µs	
Output current	≤ 10 mA	
Switching frequency (selectable)	200kHz, 500kHz and 1 MHz	
Short-circuit proof / overload proof	Yes	
Output current limitation	Yes, automatic reactivation after short-circuit/overload	
Resistance to feedback against 24V signals	Yes	
Resistance to feedback against reverse polarity	Yes	
Max. cable length, shielded (depending on sensor)	100 m	
Process voltage L+		
Nominal voltage	24 V DC	
Max. ripple	0,05	
Current consumption from L+ (FM502 and PM592, no communication module)	Max. 0.43 A + max. 0.5 A per output	
Inrush current from L+ (at power up, FM502 and PM592, no communication module)	1.2 A^2s	
Electrical isolation	Yes, (PM592 and FM502 to other I/O-Bus modules)	
Max. power dissipation within the FM502 module	6.5 W (outputs unloaded)	
5-V-encoder supply output		
Nominal voltage	5 V DC (+/- 5%), 100 mA max.	

(1) High Temperatures:
Operation of FM502-XC version in the operating temperature range between +60 °C and +70 °C with following deratings:
No use of 24 V encoder mode
Analog inputs: maximum number of configured input channels limited to 75 % per group AI0..AI7 and AI8..AI15

(1) Plug-in terminal block included.
(2) 10/100 Mbit/s, full/half duplex with auto-sensing, 2-port switch integrated.

AC500-XC
Technical data

Communication interface modules

For all modules: max cable length for connected process signals is 1000 m for shielded cable and 600 m for unshielded ones. For all Input modules, the signal resolution for channel configuration is: -10…+10 V: 12 bits + sign; 0…10 V, 0…20 mA, 4…20 mA: 12 bits. Temperature: 0.1 °C.

Type		DC551-CS31-XC	CI590-CS31-HA-XC (1)	CI592-CS31-XC
Communication Interface				
Protocol		Proprietary CS31 bus protocol on RS485 interface		
ID configuration		Per rotary switches on front face from 00d to 99d		
Field bus connection on TUs		CS31 field bus, via terminal / redundant for CI590-CS31-HA-XC on TU552-CS31-XC		
Number of Channels per Module				
Digital	inputs	8	–	8
	outputs	–	–	–
Analog	inputs	–	–	4
	outputs	–	–	2
Digital configurable channels DC (configurable as inputs or outputs)		16	16	8
Additional configuration of channels as				
Fast counter		Configuration of max. 2 channels per module		
Occupies max. 1 DO or DC when used as counter		●	●	●
Connection				
Via terminal base TU5xx		●	●	●
Local I/O extension				
Max. number of extension modules		max. 7 x S500 extension modules, up to 31 stations with up to 120 DIs/120 DOs or up to 32 AIs/ 32AOs per station		
Digital inputs				
Input	signal voltage	24 V DC		
	characteristic acc. to EN 61132-2	Type 1		
0 signal		-3...+5 V DC		
Undefined signal state		5...15 V DC		
1 signal		15...30 V DC		
Residual ripple, range for	0 signal	-3...+5 V DC		
	1 signal	15...30 V DC		
Input time delay (0 -> 1 or 1 -> 0)		8 ms typically, configurable from 0.1 up to 32 ms		
Digital outputs				
Transistor outputs 24 V DC, 0.5 A		●		
Readback of output		●		
Outputs, supplied via process voltage UP		●		
Switching of 24 V load		●		
Output voltage at signal state 1		Process voltage UP - 0.8 V		
Output current				
Nominal current per channel		500 mA at UP = 24 V DC		
Maximum (total current of all channels)		8 A	8 A	4 A
Residual current at signal state 0		< 0.5 mA		
Demagnetization when switching off inductive loads		By internal varistors		
Analog inputs AI		Max. number per module and with regard to the configuration: AIs / Measuring points		
Signal configuration per AI		–		●
0…10 V / -10…+10 V		–		4 / 4
0…20 mA / 4…20 mA		–		4 / 4

AC500-XC
Technical data

CS31 functionality

	AC500-XC CPU with integrated CS31 interface	S500 I/O with communication interface DC551-CS31-XC CI590-CS31-HA-XC CI592-CS31-XC
Master	Yes, at COM1	–
Slave	No	Yes / Redundant for CI590-CS31-HA-XC
Protocols supported	ABB CS31 protocol	
Diagnosis		
Error indication	On LCD display of the CPU	Via module LEDs
Online diagnosis	Yes	
Error code	Errors are recorded in the diagnosis system of the CPU	
Associated function blocks	Yes	
Physical layer	RS485 / 2 x RS485 for CI590-CS31-HA-XC for redundancy	
Connection	Plug at COM1	Screw-type or spring-type terminals
Baud rate	187.5 kbit/s	
Distance	AC500-XC: up to 500 m; up to 2000 m using a repeater	
Max. number of modules on fieldbus	31 modules max. Please note: The CS31 bus interface occupies one or two module addresses (if counters are configured onboard or if the module is a mixed digital analog module). Depending on the configuration, or if the module contains also mixed digital analog I/O, connected extension modules can occupy further module addresses.	
Configuration	Using configuration tool (included in Automation Builder software suite)	
Station address configuration	No	Using rotary switches (99 max.)

Digital I/O modules, "Fast Counter" operating modes. Not applicable for DC541-XC (1)

Operating mode, configured in the user program of the AC500-XC		Occupied inputs DI or DC	Occupied outputs DO or DC	Maximum counting frequency kHz
0	No counter	0	0	–
1	One count-up counter with "end value reached" indication	1	1	50
2	One count-up counter with "enable" input and "end value reached" indication	2	1	50
3	Two up/down counters	2	0	50
4	Two up/down counters with 1 counting input inverted	2	0	50
5	One up/down counter with "dynamic set" input	2	0	50
6	One up/down counter with "dynamic set" input	2	0	50
7	One up/down counter with directional discriminator For synchro transmitters using two counting pulses with an offset of 90° (track A and B)	2	0	50
8	–	0	0	–
9	One up/down counter with directional discriminator and double evaluation For synchro transmitters using two counting pulses with an offset of 90° towards each other (track A and B)	2	0	30
10	One up/down counter with directional discriminator and fourfold evaluation For synchro transmitters using two counting pulses with an offset of 90° towards each other (track A and B)	2	0	15

(1) See technical documentation for details.

AC500-XC

System data

Environmental Conditions

Process and supply voltages		
24 V DC	Voltage	24 V (-15%, +20%)
	Protection against reverse polarity	yes
Allowed interruptions of power supply	DC supply	Interruption < 10 ms, time between 2 interruptions > 1 s, PS2
	AC supply	Interruption < 0.5 periods, time between 2 interruptions > 1 s

Important: Exceeding the maximum process and supply voltages could lead to unrecoverable damage of the system. The system could be destroyed. For the supply of the modules, power supply units in accordance with PELV or SELV specifications must be used. The creepage distances and clearances meet the requirements of the overvoltage category II, pollution degree 2.

Assembly position		
Horizontal	●	
Vertical	● (1)	

(1) not in salt mist environment

Temperature		
Operating	-40 °C ... +70 °C	
	-40 °C ... -30 °C	Proper start-up of system; technical data not guaranteed
	-40 °C ... 0 °C	Due to the LCD technology, the display might not be readable
	-40 °C...+40 °C	vertical mounting of modules possible, output load limited to 50 % per group
	+60 °C ...+70 °C	with the following deratings:
		System is limited to max. 2 Communication Modules per Terminal Base
		Applications certified for cULus up to 60 °C
		Digital inputs: maximum number of simultaneously switched on input channels limited to 75 % per group (e.g. 8 channels => 6 channels)
		Digital outputs: output current maximum value (all channels together) limited to 75 % per group (e.g. 8 A => 6 A)
		Analog outputs only if configured as voltage output: maximum total output current per group is limited to 75 % (e.g. 40 mA => 30 mA)
		Analog outputs only if configured as current output: maximum number of simultaneously used output channels limited to 75 % per group (e.g. 4 channels => 3 channels)
Storage / Transport	-40 °C ... +85 °C	
Humidity		
Operating / Storage		100 % r. H. with condensation
Air pressure		
Operating		-1000 m .... 4000 m (1080 hPa ... 620 hPa)
Storage		>2000 m (<795 hPa): max. operating temperature must be reduced by 10K per 1000 m (e.g. 70 °C to 60°C)
Immunity to corrosive gases		
Operating		Yes, in accordance with: ANSI/ISA-71.04: Containment group A, G3 - Harsh / GX - Severe IEC 60068-2-60: Method 4 IEC 60721-3-3: Class 3C2 / 3C3 Gases and concentrations: Hydrogen sulfide (H_2S): (100 ± 5) ppb Nitrogen dioxide (NO_2): (1250 ± 20) ppb Chlorine (Cl_2): (100 ± 5) ppb Sulfur dioxide (SO_2): (300 ± 20) ppb
Immunity to salt mist		
Operating		Yes, horizontal mounting only, in accordance with IEC 60068-2-52 severity level: 1 NOTICE! Risk of corrosion! Unused connectors and slots may corrode, if using XC devices in salt mist environments. Protect unused connectors and slots with TA535 protective caps for XC devices.

AC500-XC
System data

Environmental Conditions

Electromagnectic Compatibility		
Radiated emission (radio disturbances)		Yes, in accordance with CISPR 16-2-3
Conducted emission (radio disturbances)		Yes, in accordance with CISPR 16-2-1, CISPR 16-1-2
Electrostatic discharge (ESD)		Yes, in accordance with IEC 61000-4-2, zone B, criterion B Electrostatic voltage in case of air discharge: 8 kV Electrostatic voltage in case of contact discharge: 6 kV
Fast transient interference voltages (burst)		Yes, in accordance with IEC 61000-4-4, zone B, criterion B Supply voltage units (DC): 4 kV Digital inputs/outputs (24 V DC): 2 kV Analog inputs/outputs: 2 kV Communication lines shielded: 2 kV I/O supply (DC-out): 2 kV
High energy transient interference voltages (surge)		Yes, in accordance with IEC 61000-4-5, zone B, criterion B Supply voltage units (DC): 1 kV CM* / 0.5 kV DM* Supply voltage units (AC): 2 kV CM* / 1 kV DM* Digital inputs/outputs (24 V DC): 1 kV CM* / 0.5 kV DM* Digital inputs/outputs (120…240 V AC): 2 kV CM* / 1 kV DM* Analog inputs/outputs: 1 kV CM* / 0.5 kV DM* Communication lines shielded: 1 kV CM* I/O supply (DC-out): 0,5 kV CM* / 0.5 kV DM* * CM = Common Mode, * DM = Differential Mode
Influence of radiated disturbances		Yes, in accordance with IEC 61000-4-3, zone B, criterion A Test field strength: 10 V/m
Influence of line-conducted interferences		Yes, in accordance with IEC 61000-4-6, zone B, criterion A Test voltage: 10 V
Influence of power frequency magnetic fields		Yes, in accordance with IEC 61000-4-8, zone B, criterion A 30 A/m 50 Hz 30 A/m 60 Hz

WARNING!
Risk of malfunctions and damages to persons!
Unused slots for communication modules are not protected against contact discharge. Dust and Dirt may cause contact problems and malfunctions.
Unused slots for Communication Modules must be covered with Dummy Communication Modules (“TA524 - Dummy Communication Module”).
I/O-Bus connectors must not be touched during operation.
In order to prevent malfunctions, it is recommended that the operating personnel discharge themselves prior to touching communication connectors or perform other suitable measures to reduce effects of electrostatic discharges.

Environmental Tests		
Storage		IEC 60068-2-1 Test Ab: cold withstand test -40 °C / 16 h
		IEC 60068-2-2 Test Bb: dry heat withstand test +85 °C / 16 h
Humidity		IEC 60068-2-30 Test Db: Cyclic (12 h / 12 h) Damp-Heat Test 55 °C, 93 % r. H. / 25 °C, 95 % r. H., 6 cycles
		IEC 60068-2-78, Stationary Vibration Test: 40 °C, 93 % r. H., 240 h
Shock resistance		IEC 61131-2 / IEC 60068-2-6: 5 Hz ... 500 Hz, 2 g (with SD Memory Card inserted)
		IEC 60068-2-64: 5 Hz ... 500 Hz, 4 g rms
		IEC 60068-2-27: all 3 axes 15 g, 11 ms, half-sinusoidal
Mechanical Data		
Wiring method		Spring terminals
Degree of protection		IP 20
Assembly on DIN rail	DIN rail type	In accordance with IEC 60715
		35 mm, depth 7.5 mm or 15 mm
Assembly with screws	Screw diameter	4 mm
	Fastening torque	1.2 Nm

AC500-S
Functional Safety PLC

AC500-S
Key features

—

Easy integration: Simple expansion of ABB PLC with safety functions. One common engineering and diagnostic system for safety and standard CPUs. eXtreme Conditions (-XC) version is available.

—

Easy implementation of flexible configuration concept (one safety program for various machine types). Safety CPU can be configured to work even if standard CPU is in STOP mode.

—

Automation Builder productivity suite providing integrated support of ST, Ladder (LD) and Function Block Diagram (FBD) programming. Trigonometric functions are supported for easy implementation of complex calculation tasks.

—

PROFINET/PROFIsafe interface for decentralized safety I/Os, safe position and speed monitoring as well as triggering of safety drive functions.

AC500-S
System data

Operating and ambient conditions

Voltages according to EN 61131-2		
24 V DC	Process and supply voltage	24 V (-15%, +20%)
	Protection against reverse polarity	Yes
Allowed interruptions of power supply acc. to EN 61131-2	DC supply	Interruption < 10 ms, time between 2 interruptions > 1 s
Important: Exceeding the maximum process and supply voltages could lead to unrecoverable damage of the system. The system could be destroyed.		
Temperature		
Operating	0 °C ... +60 °C	horizontal mounting of modules
	0 °C ... +40 °C	vertical mounting of modules and output load reduced to 50 % per group
Storage / Transport	-40 °C ... +70 °C	
Humidity		
Operating / Storage		Max. 95 %, without condensation
Air pressure		
Operating		> 800 hPa / < 2000 m
Storage		> 660 hPa / < 3500 m

Creepage distances and clearances

Insulation Test Voltages, Routine Test, according to EN 61131-2	**AC voltage during 2 seconds**
24 V circuits (supply, 24 V inputs/outputs), if they are electrically isolated against other circuitry	350 V

The creepage distances and clearances meet the requirements of the overvoltage category II, pollution degree 2.

AC500-S
System data

Power supply units
For the supply of the modules, power supply units according to PELV specifications must be used.

Electromagnetic Compatibility

Immunity		
Against electrostatic discharge (ESD)		In accordance with EN 61000-4-2, zone B, criterion B
Electrostatic voltage in case of	air discharge	±8 kV
	contact discharge	±6 kV
ESD with communication connectors		In order to prevent operating malfunctions, it is recommended that the operating personnel discharge themselves prior to touching communication connectors or perform other suitable measures to reduce effects of electrostatic discharges.
ESD with connectors of Terminal Bases		The connectors between the Terminal Bases and CPUs or Communication Modules must not be touched during operation. The same is valid for the I/O-Bus with all modules involved.
Against the influence of radiated (CW radiated)		In accordance with EN 61000-4-3, zone B, criterion A
Test field strength		10 V/m
Against transient interference voltages (burst)		In accordance with EN 61000-4-4, zone B, criterion B
Supply voltage units	DC	2 kV
Digital inputs/outputs	24 V DC	2 kV
Analog inputs		1 kV
Against the influence of line-conducted interferences (CW conducted)		In accordance with EN 61000-4-6, zone B, criterion A
Test voltage		10 V zone B
High energy surges		In accordance with EN 61000-4-5, zone B, criterion B
Power supply	DC	1 kV CM (1) / 0.5 kV DM (2)
DC I/O supply, add. DC-supply-out		0.5 kV CM (2) / 0.5 kV DM (2)
I/O analog, I/O DC unshielded		1 kV CM (2) / 0.5 kV DM (2)
Radiation (radio disturbance)		In accordance with EN 55011, group 1, class A

(1) High requirement for shipping classes is achieved with additional specific measures (see specific documentation).
(2) CM = Common Mode; DM = Differential Mode.

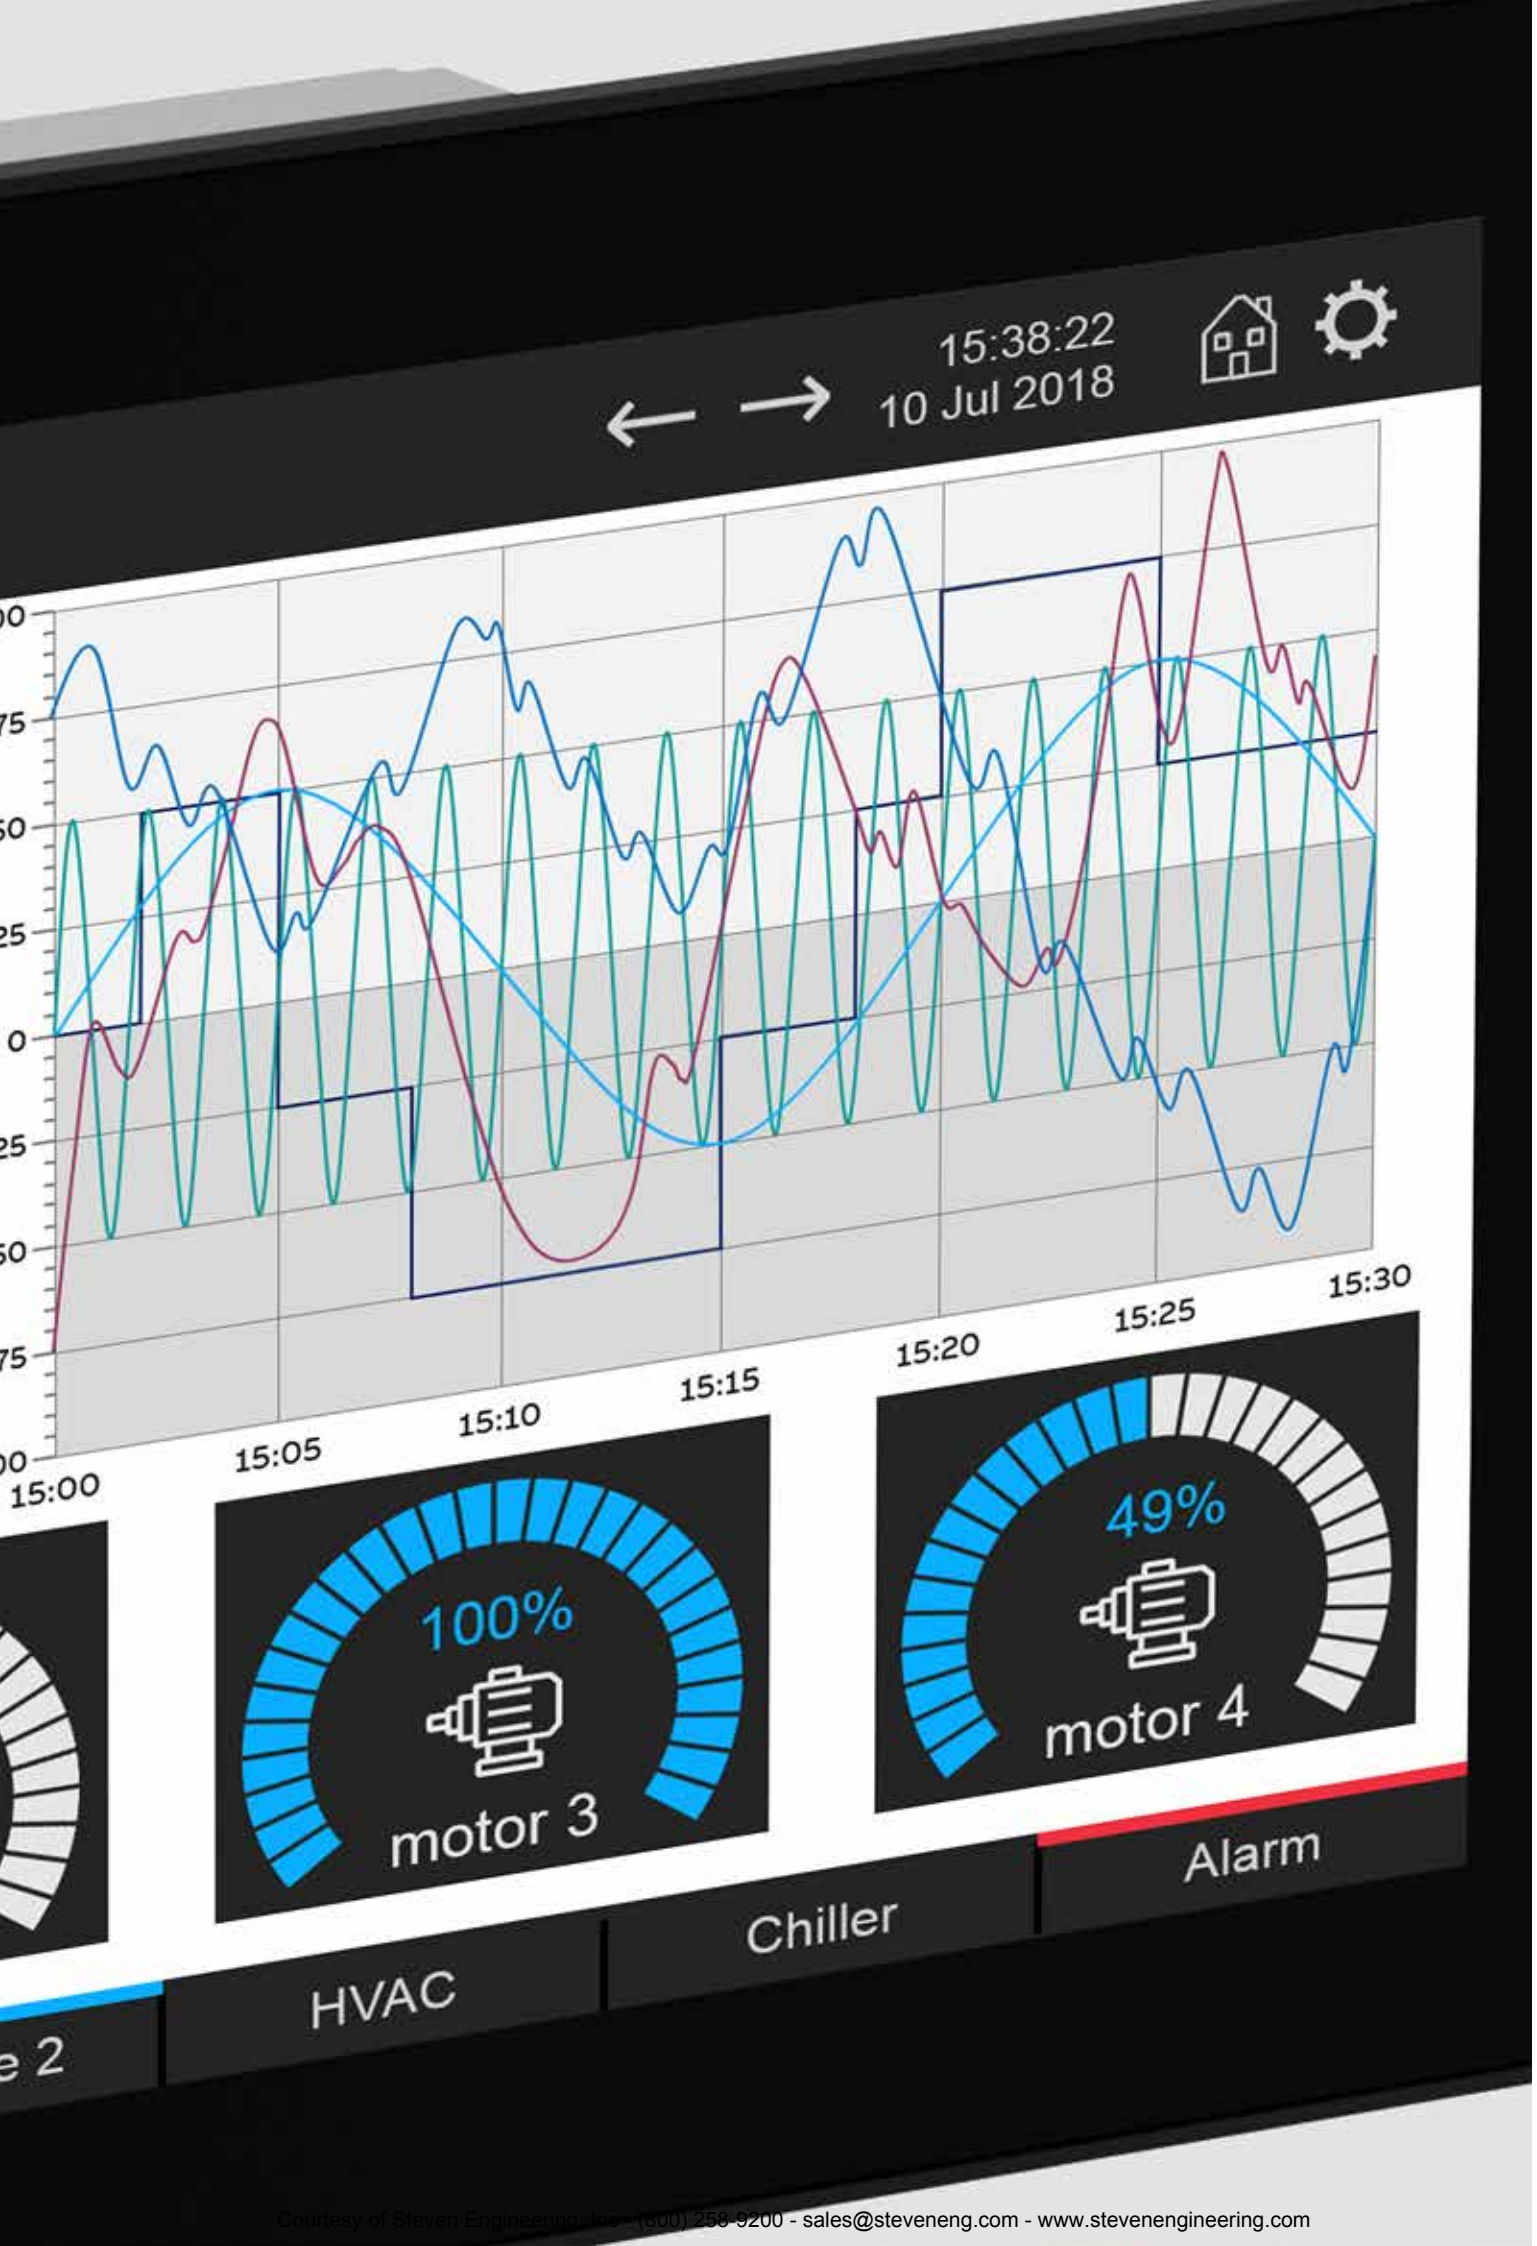
CP600-eCo, CP600 and CP600-Pro
Control panels



CP600-eCo, CP600 and CP600-Pro
Key features

Various options for tailor made HMI solutions:
- PB610 Panel Builder 600 HMI applications
- Visualization of AC500 web servers
- Mobile remote access to HMI applications
- PB610-R PC runtime for Windows platforms
- Drivers for integration into automation systems
- OPC UA client and server

- CP600 brilliant colored display
- Aluminium enclosure
- Seven different screen sizes

- CP600-Pro multi-touch
- Brilliant real glass screen
- Aluminium enclosure
- Fast ETH 10/100/1000
- Operating temp.: -20...+60 °C
- Five different screen sizes from 5" to 21.5"

- CP600-eCo slim design for easy installation even in compact spaces
- Robust plastic enclosure
- Three different screen sizes

CP600-eCo, CP600 and CP600-Pro

Application descriptions and additional information

Application descriptions
Building Automation with AC500 and KNX

AC500 as freely programmable KNX controller, gateway or monitoring and visualization device

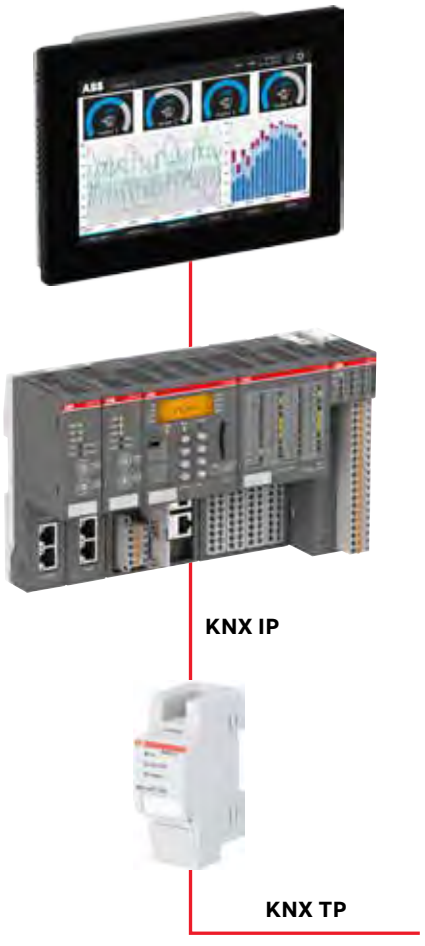
Easy creation and reuse of automation software in building automation by using the IEC 61131 standardized programming languages and library philosophies.

Use the AC500 PLC and S500 I/O for modular control e.g. for advanced energy efficient operation and monitoring tasks, from small to largest buildings.

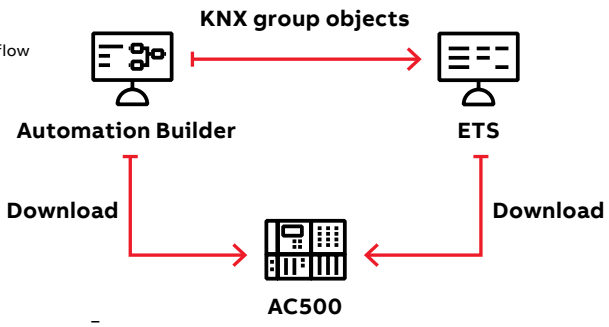
Use the AC500 communication capabilities with other fieldbuses and protocols to connect, control and monitor the large portfolio of ABB components such as other low voltage products, ACS drives, motors, substations or connect them with building automation systems and the cloud.

Use the AC500 and CP600 visualization capabilities for local or remote monitoring across all levels.

Use KNX connectivity to add communication capabilities of the proven ABB i-bus® KNX devices like e.g. Dali, M-Bus etc. to the PLC automation level.



–
01 Integrated engineering workflow



–
01

Digital connectivity

Management
Monitoring
Facility automation

Central automation

Floor automation

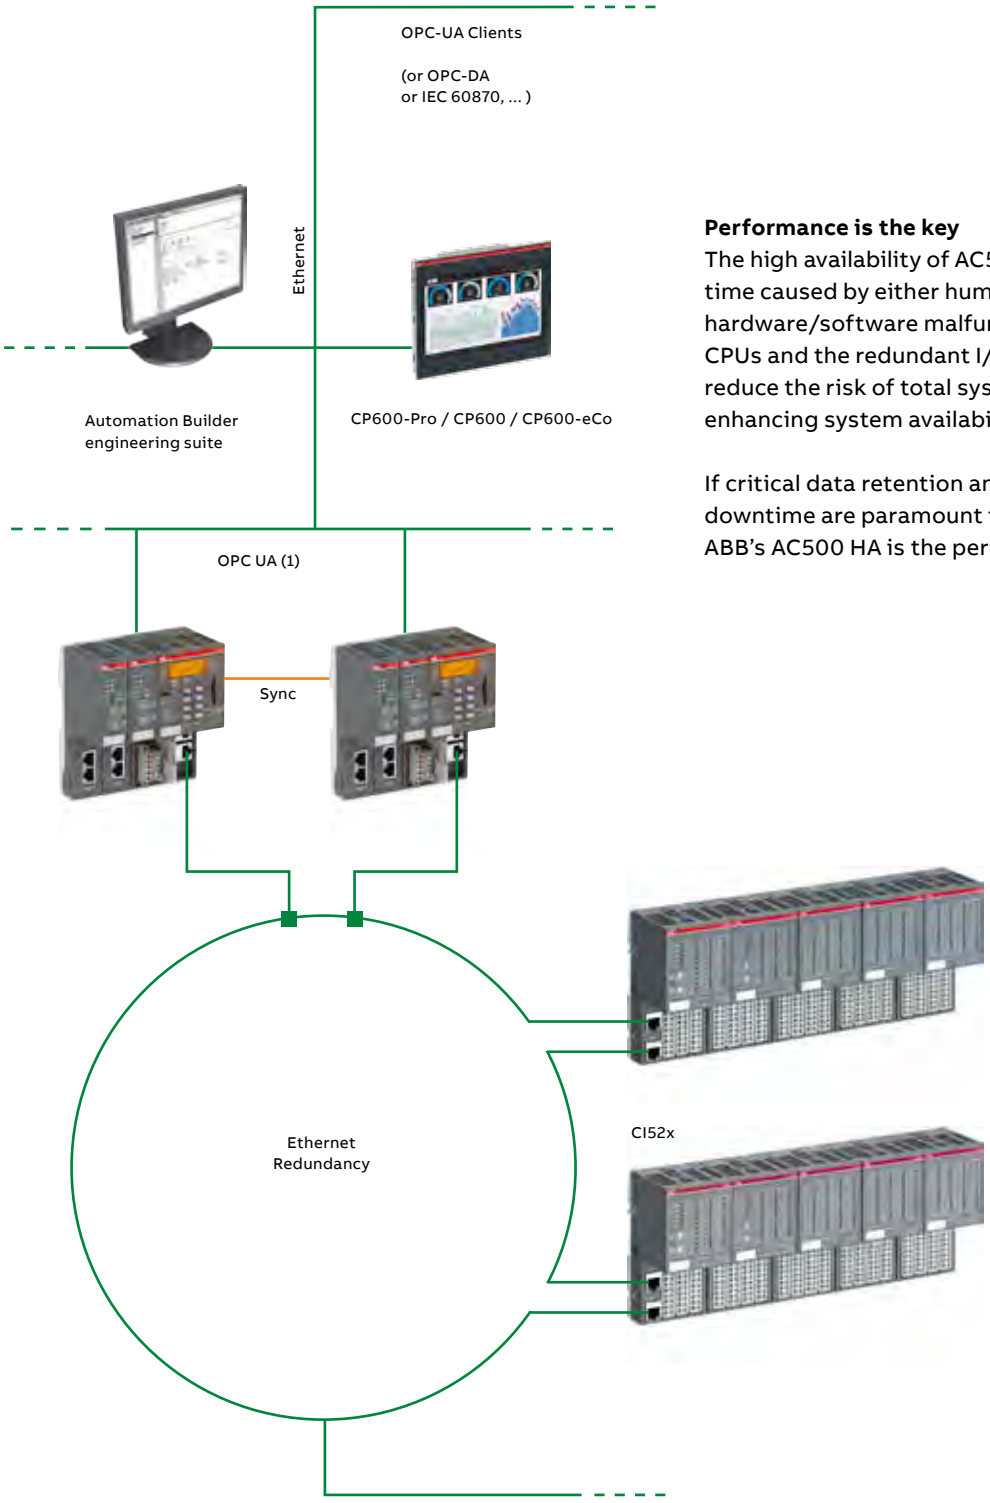
Room automation

Seamless solution
Everything in one system from room to central building functions, based on KNX and the integration of ETS and Automation Builder engineering.

Application example HVAC
Heating, ventilation and air-conditioning technology is made up of various systems, often spread on room, floor and central levels that can now be integrated into a single system with integrated engineering.

With the proven ABB i-bus® KNX system expanded by AC500, it is possible to automate all HVAC and energy efficiency applications and combine them into a single solution to enable monitoring and optimization across all levels.

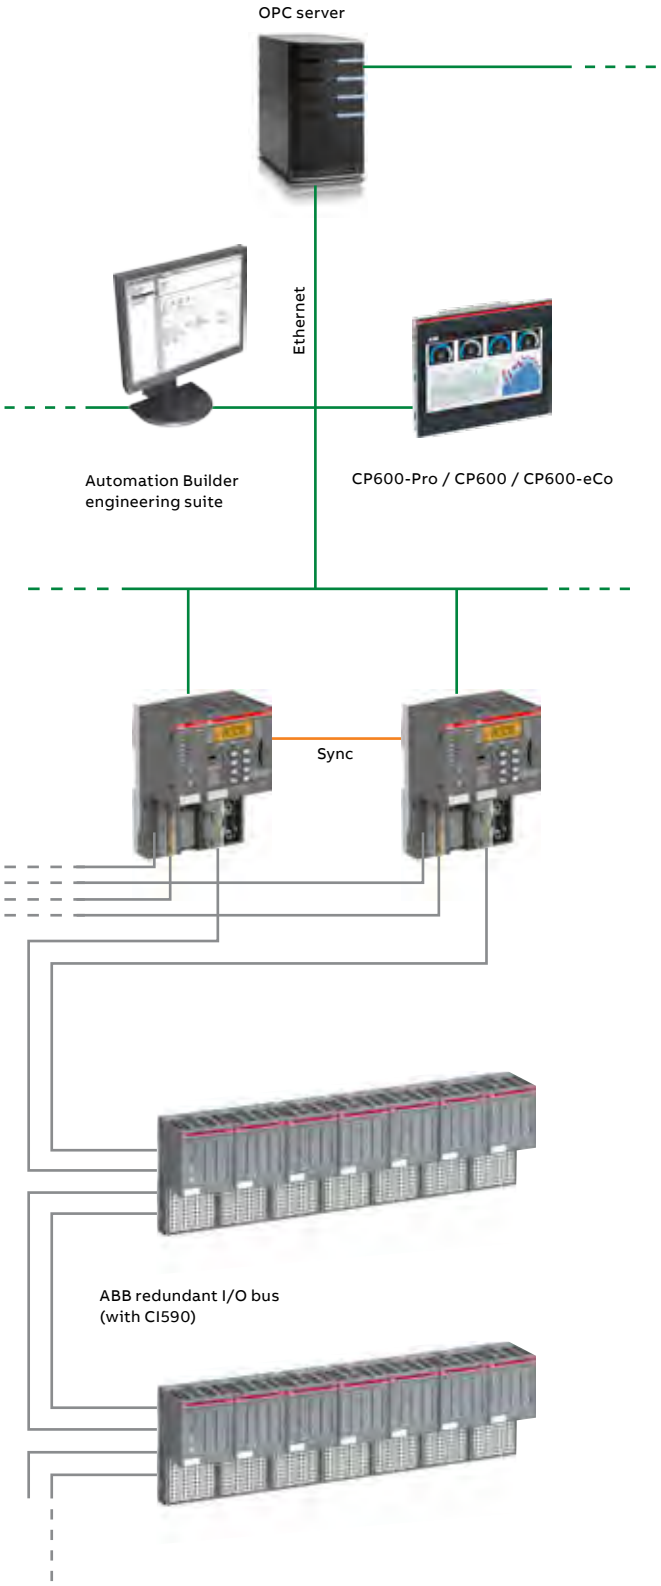
Application descriptions
AC500 HA offers hot standby redundancy



Performance is the key
The high availability of AC500 HA prevents down-time caused by either human error or cabling/ hardware/software malfunction. Redundant CPUs and the redundant I/O communication reduce the risk of total system failure, thus enhancing system availability.

If critical data retention and the avoidance of downtime are paramount to your application, ABB's AC500 HA is the perfect solution.

(1) AC500 V3 CPUs only



What are the benefits of AC500 HA for your high availability solution?

- Hot standby: Both CPUs (and all communications) are hot: Permanently running in parallel, continuously synchronizing each other and monitoring the system. If the primary CPU is stopped, powered off or crashed, or if an I/O communication/cable has failed, the other hot standby CPU takes over immediately by adopting primary status.
- Higher resource utilization, no downtimes caused by cabling/hardware/software failure thanks to redundant CPUs and redundant communication to I/O and SCADA/HMI.
- Cost efficiency and easy system maintenance through the use of standard hardware.
- High availability is provided with standard CPUs. Cost matching hot standby quality for small or large systems.
- Scalable in both variants: CS31 redundancy bus or Ethernet.

Application descriptions
Hot Swap of S500 I/O modules for increased availability

Replacing S500 I/O modules while the system is running
The hot swap terminal units TU516-H, TU532-H and TU542-H allow no-load hot swapping of S500 I/O modules during operation. When replacing a S500 I/O module the other modules in the cluster continue operating.

This capability is available for an I/O cluster with the following fieldbuses:
- PROFIBUS
- PROFINET
- Modbus TCP

Permanent wiring
Due to the construction of the S500 system, the wiring remains untouched during hot swap. There is no need to remove terminal blocks.

A S500 I/O module can be removed and replaced while the other modules in the configuration continue operating.

As soon as a module is re-inserted, it will be configured automatically and put into operation.

Applications
Hot swap is needed in hybrid applications when the control system must not be switched off during the replacement of a module.

Application descriptions
S500 I/O modules run with various controllers

S500 remote I/O
The availability of different fieldbus communication interfaces makes it easy to use S500 I/O modules as remote I/O for nearly any PLC and PC. The S500 remote I/O station consists of a communication interface and I/O modules. The smallest configuration can be just the communication interface with the onboard I/O channels. Communication interfaces are available for the following fieldbuses:

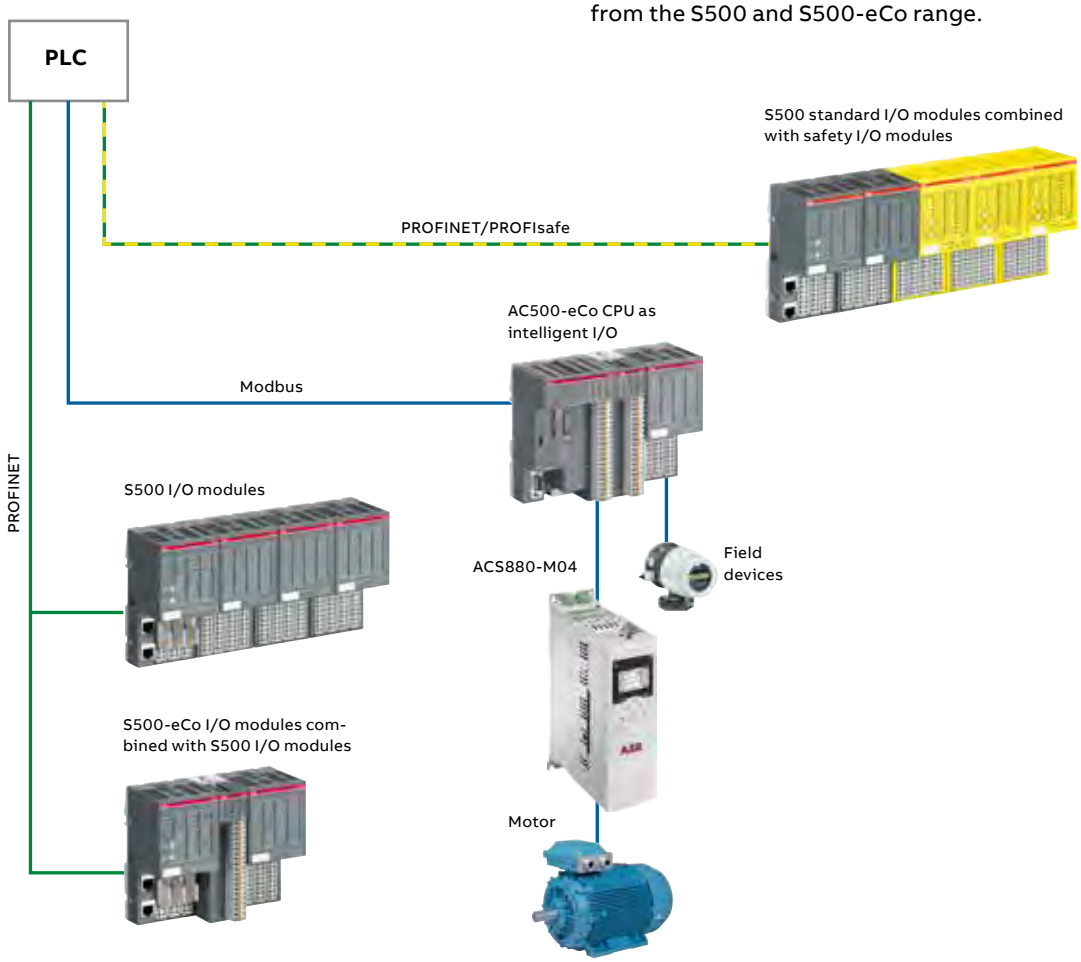
- PROFIBUS
- PROFINET/PROFIsafe
- EtherCAT
- Modbus TCP
- CANopen
- ABB CS31 System Bus

Easy engineering
The electronic configuration files that are provided by ABB for different fieldbus systems make it easy to configure the S500 remote I/O station in your engineering tool. The files such as GSD and GSDML are available for download at www.abb.com/plc. For Modbus TCP remote I/O stations a dedicated configurator is included in Automation Builder and for larger applications a Bulk Data Manager tool can be used.

AC500-eCo CPU as S500 remote I/O
When the AC500-eCo compact CPU is used as remote I/O, it can be programmed with Automation Builder for local intelligence while communicating via the open protocols Modbus TCP or Modbus RTU with a CPU that will then be the master of this intelligent remote I/O station. The AC500-eCo CPU can be expanded by I/O modules from the S500 and S500-eCo range.

—
Third party PLC, IPC or machine controller

Controller can also be an IPC with ABB Ability™ for data center



S500 remote I/O with Modbus TCP
ABB provides a configurator in the Automation Builder tool, which allows the configuration of Modbus TCP I/O stations with the communication interfaces CI521-MODTCP or CI522-MODTCP in the same style as the AC500 configuration. For larger applications a Bulk Data Manager tool can be used. The configuration can be stored in the communication interface, which allows using the configured station with any PLC or PC that supports Modbus TCP. This e.g. allows the use directly on other controllers or monitoring systems as e.g. ABB Ability™ Data Center Automation or external systems.

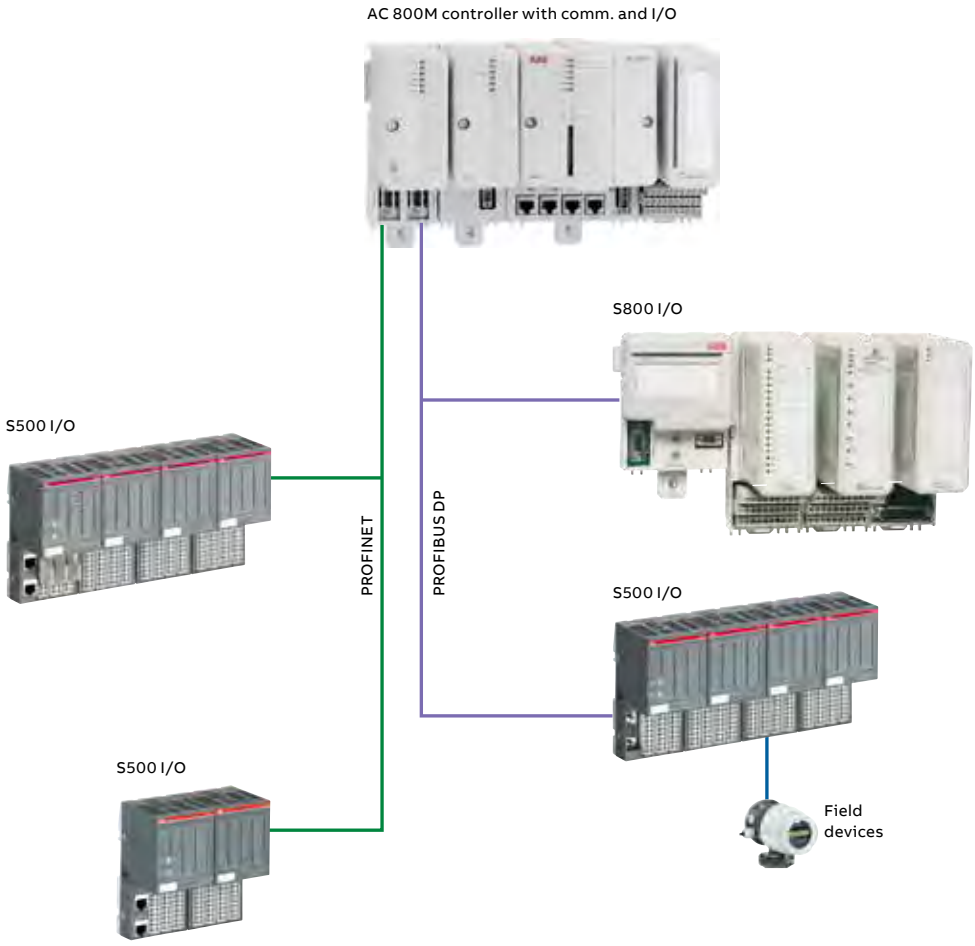
Thanks to the Modbus feature that allows several masters to exchange data with the same slave, it is possible to use the I/O station as shared devices with up to 10 PLC CPUs.

The Modbus masters can access the process data of the I/O stations in two different ways:
- Fixed mode: each I/O module in the station uses a separate register address range, which requires separate Modbus read/write operations for the modules in the station.
- The dynamic mode allows to pack the data of all I/O modules in the station in one data structure that can be exchanged in one single read/write operation.

S500 remote I/O with PROFINET/PROFIsafe
Simply extend your control system with ABB standard and safety I/Os to simplify wiring, reduce operating costs and benefit from the unique features of our safety I/O portfolio to increase the productivity of your machines.

For more information about safety applications, please see application description Embedding safety I/Os in ABB robots on page 216.

S500 in hybrid applications with AC 800M Controller
The communication interfaces for PROFIBUS and PROFINET facilitate the integration of S500 as remote I/O stations in the System 800xA AC 800M family of controllers. System redundancy is supported with PROFINET. The configuration is integrated into the engineering tool of the DCS controller.



Application descriptions
AC500 PLC integration in ABB Ability™ System 800xA

Integration of AC500 PLC into System 800xA
The AC500 PLC hardware can be used for certain process control functions while the operator benefits from user experience in System 800xA. Proven libraries are provided for 800xA and AC500. This allows programming control tasks in the AC500 PLC while System 800xA is the operator interface. An object library for 800xA contains the symbols and faceplates for twelve different object types. For large distributed projects, many AC500 PLCs can be connected to an 800xA system. The communication between 800xA and the PLCs uses OPC.

Simplified engineering
A function block library for AC500 contains a function block for each object. The control task is engineered with Automation Builder. The communication between the objects in System 800xA and the function blocks in AC500 is configured with Bulk Data Manager, which is part of the 800xA engineering toolset. A library with ready-made symbols and faceplates for the objects is available for 800xA engineering.

Integrated documentation
For engineering, the function blocks for AC500 include the user documentation. The faceplates provide multi-language support for the text elements and allow adaptation of the color codes of the elements to the preferences of the application.

Objects
Twelve objects are available which cover the following functionalities:
- Digital and analog setpoints
- Analog measurement with threshold alarm functions
- Valve control
- Motor control with or without variable speed drives
- Proportional integral controller

Communication between System 800xA and AC500 PLC
Communication between the AC500 function blocks and the objects in System 800xA uses the PLC Connect option of 800xA and the AC500 OPC Server.

System 800xA and AC500 PLC network architecture

Application descriptions
Condition Monitoring with AC500 PLC

Controller integrated or stand-alone condition monitoring
The AC500 condition monitoring module FM502 is a natural part of the AC500 platform and Automation Builder engineering suite, and can be used in different condition monitoring concepts, stand-alone or control integrated.

Due to the easy programming in PLC languages, it is usable for a variety of use cases and is especially suitable for plant, line and machine builders as easy extension of their offering.

If controller integrated
- it enables at very reasonable cost
- the best prediction horizon as it can measure online, when best measurement quality is given without scheduling production interruptions
- while continuously protecting the application in real time e.g. with the same or other sensor(s).
- Further inputs can be used as fast data logger e.g. precisely documenting process quality.

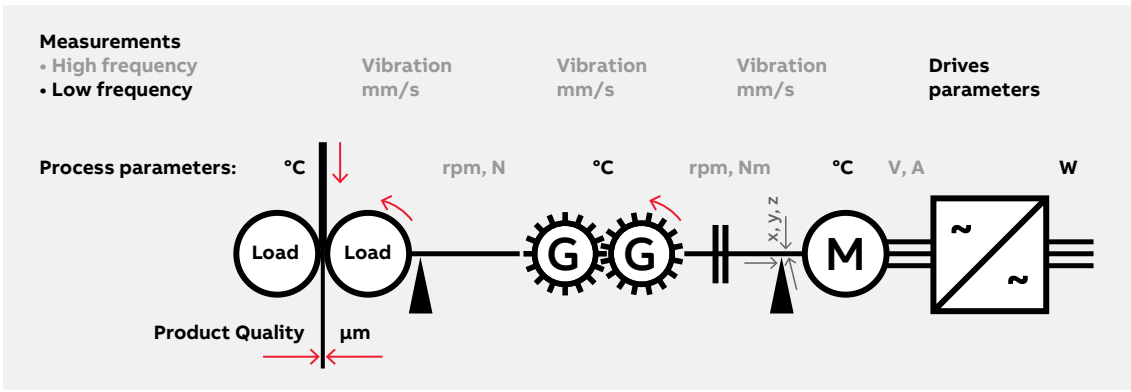
Therefore it is not only able to continually check the mechanical components but also gives fast protection for spontaneous and large failures even while measuring. The condition monitoring mode creates a database internally or externally for predictive maintenance. Automatic and user assisted responses can be enabled to prevent costly consequences including total failures.

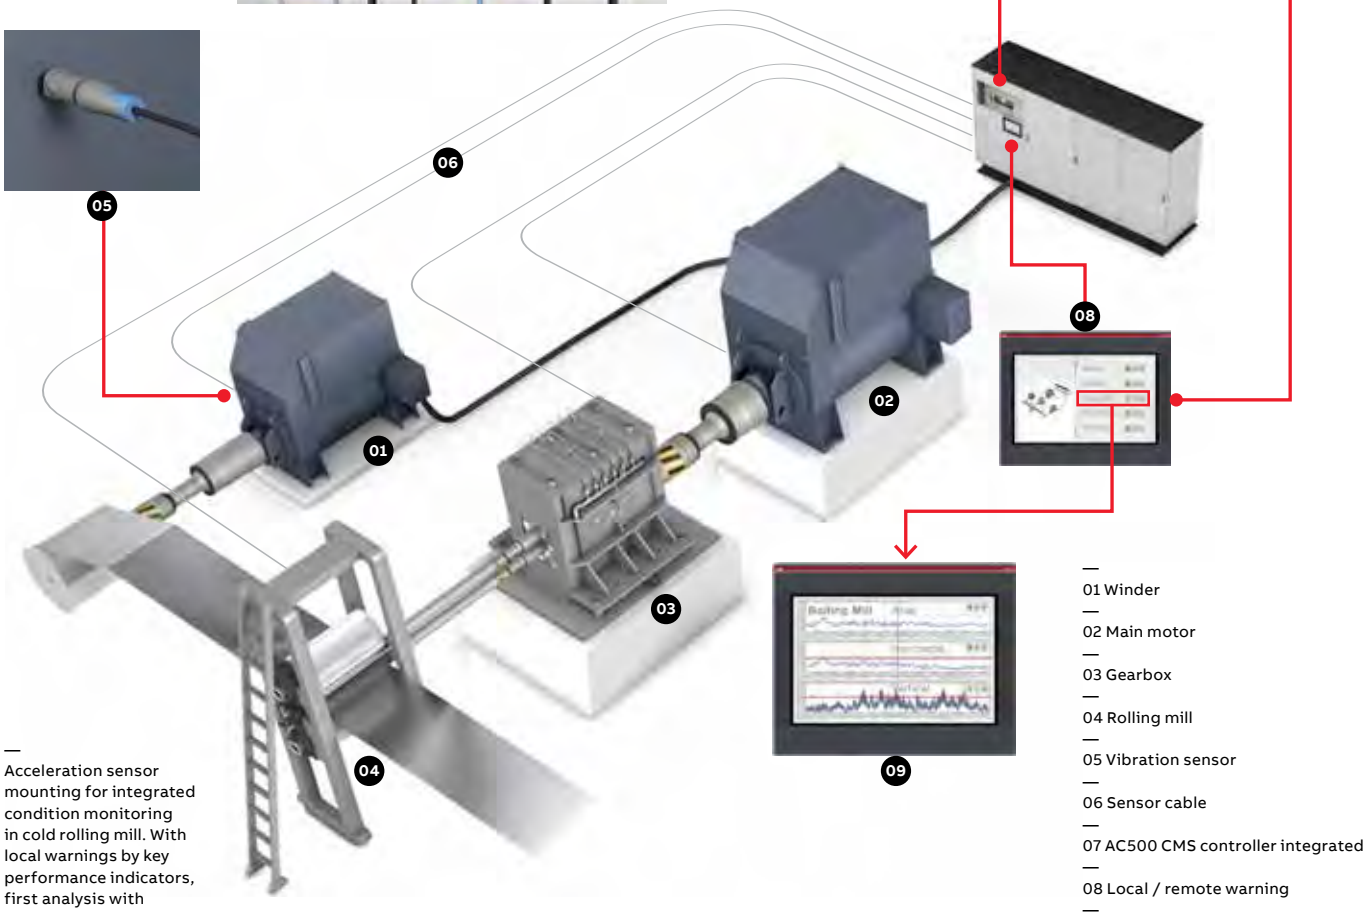
As many as 16 vibration sensors + 2 encoder counters can be connected.

The recorded condition monitoring data can be stored in the CPU flash disk before communication or directly analyzed. Higher level indicators can be calculated and communicated to a local or remote HMI or database system.

Predictive performance for your process or machines
- Easy and cost saving integration of condition monitoring into the AC500 platform.
- Early detection of mechanical damages.
- Fast protection from spontaneous failures.
- Even complex C-code analytics can be used locally for meaningful own performance indicators.
- Leads to optimized planning of maintenance instead of fixed, scheduled service and spontaneous repair.
- No additional system or fixed software for diagnostics and visualization needed.
- Easy storage of the data, locally (4GB) or in remote servers and databases.
- Ideally suited also for retrofit of older equipment, as it can make use of mechanical reserves of still valuable equipment.

—
AC500 Condition Monitoring module FM502-CMS: Controller integrated or stand-alone CMS covering a complete drive train.





—
Acceleration sensor mounting for integrated condition monitoring in cold rolling mill. With local warnings by key performance indicators, first analysis with detailed verification possibility via CP600 and remote connectivity.

Application descriptions
Machine controllers based on AC500 PLC

From simple to high end motion applications
- Convenient PLC portfolio for diverse applications
  - Simple machine control with AC500-eCo PLC
    - Point-to-point motion with PTO outputs or Modbus communication with the drive
  - Mid-range applications with AC500 PLC
    - EtherCAT communication with the drive or remote I/O and cam-switch for synchronized motion
  - High-end motion application with PM595
    - Axis interpolation e.g. for Delta robot
- Easy integration and excellent scalability using Automation Builder
- Motion library for complex applications

Multi-axis motion coordination with EtherCAT
ABB's AC500 PLC using EtherCAT real-time bus delivers high performance for multi-axis control applications.

The AC500 PLC provides an industry solution with IEC 61131-3 programming and PLCopen motion functions in combination with ABB drives such as ACS880-M04 fitted with the FECA-01 EtherCAT module for higher power axes or ACS380 drives or with MicroFlex e190.

This popular high-performance motion bus provides simple 'daisy chain' connection.

EtherCAT AC500 machine controller kits
In order to simplify your application, ABB offers products for the implementation of machine control or motion control applications. These products can be purchased individually or as a kit.

Two available EtherCAT kits contain the components required for your application.

Depending on the required performance, the kit provides a powerful CPU, an EtherCAT master communication module and the respective terminal base.

The kit can be expanded using standard I/Os, other communication products or software solutions.

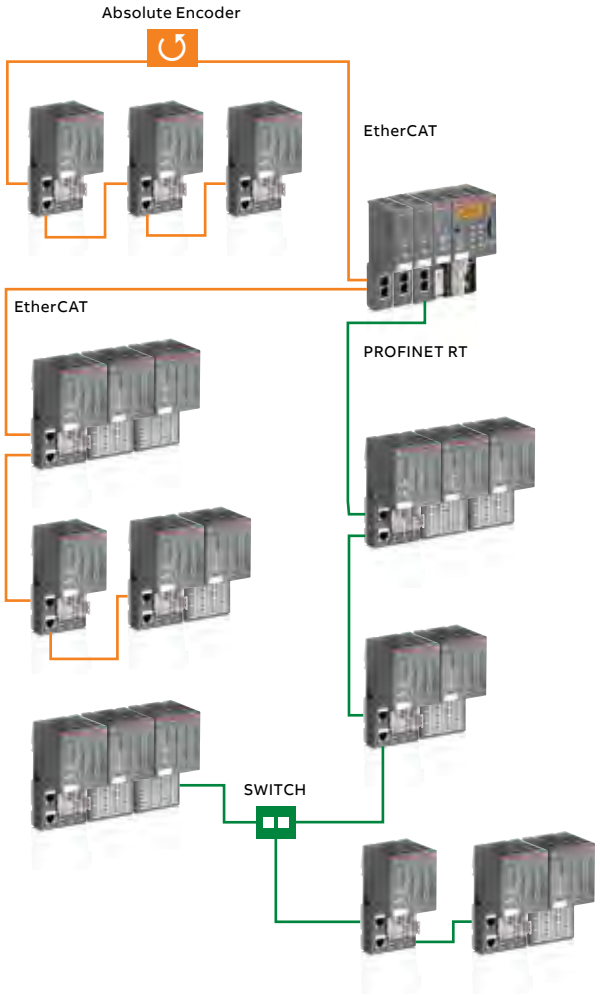
AC500 Machine controller kits

Program memory kB	Cycle time in µs per instruction min. Bit/Word/Float. point	Integrated communication	Type	Order code	Price	Weight (1 pce) kg
1024	0.004 / 0.008 / 0.008	PM585-ETH, CM579-ETHCAT, TB511-ETH Ethernet (2), 2 x serial, EtherCAT Master	PM585-MC-KIT	1SAP140500R0379		0.500
2048	0.002 / 0.004 / 0.004	PM590-ETH, CM579-ETHCAT, TB521-ETH, TA524 Ethernet (2), 2 x serial, EtherCAT Master	PM590-MC-KIT	1SAP150000R0379		0.500

AC500 CPU PM595

Program memory MB	Cycle time in µs per instruction min. Bit/Word/Float. point	Integrated communication	Type	Order code	Price	Weight (1 pce) kg
16	0.0006/0.001/0.001	2 x Ethernet (2 Ports switch), 2 x Ethernet (2), 2 x serial	PM595-4ETH-F	1SAP155500R0279		1.050

Application descriptions
Real-time Ethernet functionality

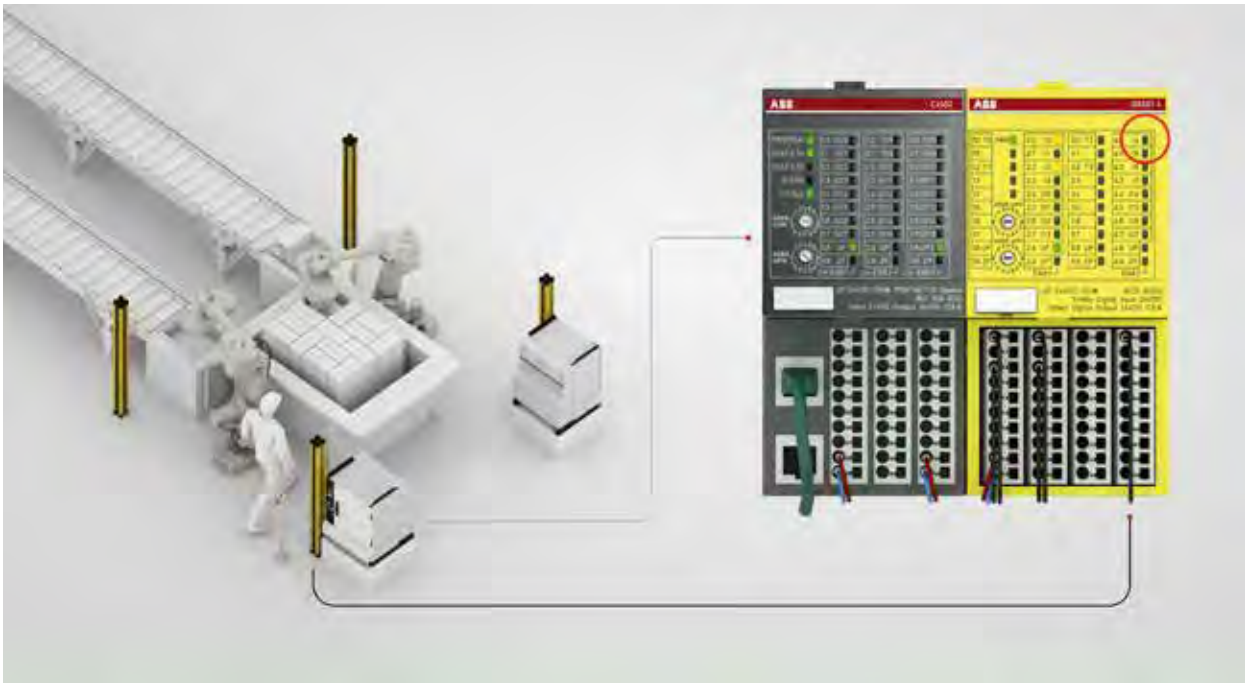


RT-Ethernet modules
Modules are available with two different communication protocols based on Ethernet (PROFINET I/O, EtherCAT). Master couplers connect AC500 CPUs to remote I/O modules. Various interface modules offer the connection of decentralized I/O modules to the real-time Ethernet networks.

Cam-switch functionality
Modules based on the decentralized real-time EtherCAT interface technology with integrated I/Os and programmed with PLCopen function blocks are available.

Application descriptions

Embedding safety I/Os in ABB robots enhances man-machine collaboration



Integration of safety I/Os
ABB is embedding S500 safety I/Os within its series of robot controllers to improve the flexibility, safety and reliability of collaboration between robots and people, which prevents unnecessary disruption to production. Simply extend your control system with ABB S500 safety I/Os to save wiring efforts, operation costs and use unique features of our safety I/O portfolio to increase your machine productivity.

A light curtain, laser scanner, safety mat, E-stop and acknowledge button, for example, are connected to ABB's S500 safety I/O module, which is integral to the ABB robot controller. Should a human enter the robot's cell to undertake maintenance, the safely-limited speed of the robot can be triggered, if permitted, as opposed to a safe stop. The robot moves very slowly and within the pre-defined safe work zone using ABB's SafeMove2. Once the human leaves the cell, the robot can resume its faster operational speed with or without acknowledgement, depending on the used safety sensors.

Cost-efficient solution
As the S500 safety I/Os are controlled by the safety module inside the robot controller, there is no need for third party stand-alone safety PLCs to be used. This saves costs as the combination of I/O and robot controller frees up space that would normally be needed for a separate cabinet. It also reduces the time associated with the set-up and operation of robotic production cells. This standardized solution leads to reduced spares, less wiring and lower operational costs as well as easy engineering through common diagnostics.

Enhanced functionality

- More test pulse outputs on S500 safety digital I/O modules ensure higher degree of fault diagnostics and reaction, which results in higher safety integrity level for safety functions in the machine.
- Each safety I/O channel has not only process state LED but also fault-diagnostic LED which significantly simplifies maintenance work and, thus, save your operation costs.
- Extreme condition (XC) modules are available (-40 to +70 °C, high vibration and shock requirements, etc.), which allows cost-savings in engineering and operation.
- Fool-proof protection implemented in all safety I/O modules (reverse signal or power supply polarity, wrong module placement, short circuit etc.), to avoid damaged modules due to wrong wiring.

More flexibility

- A single safety I/O channel can be individually reintegrated, which may provide higher machine availability in many customer cases.
- Front panel rotary switch for PROFIsafe address ensures less maintenance effort because you can see all pre-set PROFIsafe addresses directly looking at the front cover of safety I/O modules (no more need to disassemble safety I/Os).
- Built-in module power supply (no additional 24V DC power supply needed), which makes your power supply connections much simpler.

Application descriptions
Safe communication between safety CPUs

— 01 A modern distribution center comprises several independent systems including conveyor and lift systems, robotic sorting and palletizing processes, together with autonomous guided vehicles, or AGVs, and automated stacker cranes that lift pallets to and from the high bay storage systems. Each system needs to exchange its control and safety data via a central control system or distributed control system in an efficient and reliable manner so as to maintain productivity and minimize downtime.

Real-time exchange of high volume process and safety data

ABB has moved from using just one central PLC controller to multiple controllers capable of communicating with many machines in real-time. Now each machine controller can exchange big volumes of process and safety data in real-time to more than one central control system simultaneously.

New safety CPU modules SM560-S-FD-1 (-XC) and SM560-S-FD-4 (-XC) that can now function as both a safety controller and a safety device are launched by ABB. The modules, when used with ABB's AC500/AC500-S Programmable Logic Controller (PLC), feature the ability to exchange process and safety data, not only from one controller to multiple devices but also from one device to multiple controllers, using PROFINET/ PROFIsafe shared device functionality.

Now hybrid interconnected PLC control systems can extend traditional centralized or distributed control. As such, each controlled machine can deliver high volumes of process and safety data in real-time, simultaneously, to several central control systems.

This solution replaces gateways which are expensive, take valuable control cabinet space and because they are limited to only 12 bytes of safety data per gateway, cannot communicate in real-time with large safety data volumes. With the new solution, a maximum of 1440 bytes of process data including up to 384 bytes of functional safety data can be allocated for up to four PLC controller systems, thereby providing faster reaction to optimize the production and improve the predictive maintenance that leads to less downtime.

Application descriptions
Triggering safety actions using standard HMI

With ABB's AC500-S safety PLC, standard HMIs such as control panels and mobile devices can be used to alter functional safety control functions in industrial applications. ABB has developed a method of using standard human machine interface (HMI) products such as control panels, industrial PCs and mobile devices to reconfigure safety control functions.

Using ABB's AC500-S safety PLC, operators of equipment such as harbor and factory cranes, hoists, elevators, airport passenger bridges, automatic guided vehicles (AGVs), robots, mining and pulp & paper machinery can select, modify and amend their safety control functions. This allows them to achieve functional safety standard requirements while benefiting from the convenience and low costs of using standard HMIs.

Operators of these industrial applications need to reconfigure their safety control functions to adapt to changed application conditions and to optimize machine productivity. These reconfigurations, known as safety actions, are often performed using mechanical or electro-mechanical mode selector switches connected to the digital safety inputs of a safety PLC.

This method suffers from limited user-friendliness, inability to make modifications to switch layout and function, limited number of selection options and relatively high costs for the mode selector switches and digital safety input channels.

ABB solves these challenges by allowing standard HMIs, such as control panels, industrial PCs and mobile devices to interface with an ABB AC500-S safety PLC to carry out these safety actions.

Please watch our videos on our ABB PLC YouTube channel:

www.youtube.com/user/abbplc

Another example is in the selection of a crane, allowing it to be controlled remotely using the emergency stop located on the operator desk. A network links the AC500-S safety PLC in the control room with the safety PLCs at the cranes. The user in the control room can select, using standard HMI equipment, which of the cranes will stop if the emergency stop button is activated on the remote operator control station. Pressing the remote emergency stop button on the operator's desk will therefore stop the selected crane only. Independent of the remote emergency stop function, all cranes still have their own local emergency stop controls.

The ability to select from a wide range of HMI products offers the user independence from any one vendor, a larger range of input options and greater flexibility to adapt the connections and layout of the HMIs.

PLC training and support
Offering

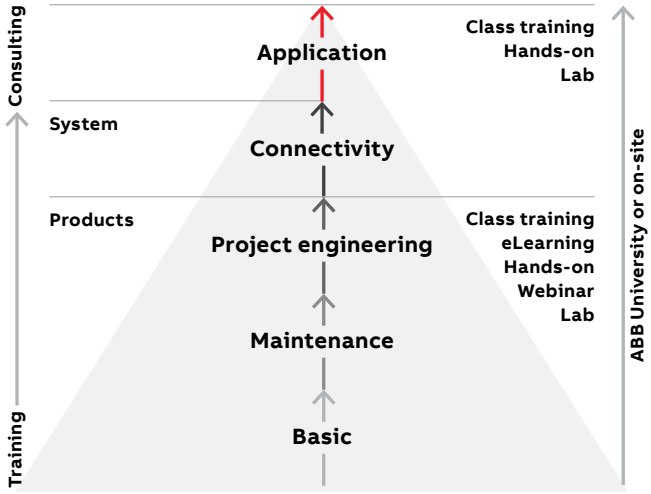

ABB provides training and technical support guiding you to the ideal PLC Automation products for your applications. Supported by one of the world's most extensive global sales and service networks, we offer PLC and Automation Builder software training designed for engineering, operation and maintenance of PLC automation solutions.

PLC training and support
Application examples

ABB Automation Builder is the integrated engineering suite for machine builders and system integrators. ABB Automation Builder covers the engineering of ABB PLCs, safety, control panels, drives and motion. The application examples contain programming descriptions for different communication protocols and automation components.

CI52x-MODTCP modules, configuration and communication
This application example describes the configuration (TCP/IP address and parameters) of the CI52x communication interface modules with Automation Builder. The second part describes communication with the configured modules and an AC500 PLC.

AC500 BACnet IP, data exchange between 2 CPUs via the CP600 gateway
This application example demonstrates how to exchange data between PLC A and PLC B where both PLCs act as servers only. The trick is to use a CP600 panel as BACnet gateway. The panel acts as BACnet client.

AC500 PROFINET, configuration and engineering
This application example describes how to configure and setup a PROFINET communication with Automation Builder V2.0.x. The detailed step-by-step instruction shows all necessary steps and describes the relevant parameters which have to be set carefully to establish a reliable and robust PROFINET communication.

The second part of this application example contains general information on e.g. cables, plugs, switches and network topologies which helps you realize your own PROFINET application project.

Use of AC500 CMS filters
This application example explains in an easy to understand way how to filter measured signals in two different ways and calculate the RMS value with the filtered signal.

AC500 license and IP protection for Codesys V2.3 libraries
The license protection of Codesys libraries aims at controlling the use of a library within the engineering context.

PLC training and support
Application notes

Triggering safety actions using standard HMI
The application note describes the AC500/ AC500-S system configuration, programming approach, safety calculation and requirements for standard HMIs for triggering safety actions using them. Standard HMIs that support at least two different Ethernet-based communication protocols can be used. ABB recommends Modbus/ TCP and ABB ETH. A mean time between failures (MTBF) greater than 22.5 years is required for standard HMIs to satisfy PL d (ISO 13849-1) requirements. HMIs with lower MTBFs may only satisfy PL c (ISO 13849-1) requirements.

AC500-S safety I/O DX581-S with ABB safety relays BSR23
The application note provides technical details on using the DX581-S safety I/O module with ABB BSR23 safety relays for the potential-free switching of 6 A / 5A (24 V DC / 250 V AC) electrical loads, such as big safety contactors or safety valves by means the AC500-S safety PLC. Typical wiring examples and information related to safety calculations are included. Explanations of using the PLCopen safety FBs delivered with the AC500-S safety PLC in the safety application program to supervise the state of safety relay contacts are provided.

Using DX581-S safety digital outputs with 2A 24 V DC electrical loads
The application note describes how the DX581-S safety I/O module developed for electrical loads with up to 500 mA 24 V DC can be used for switching 2A 24 V DC electrical loads such as big safety power contactors or solenoid valves. Details for wiring, channel configuration and safety calculation are provided.

Cyclic non-safe data exchange between the SM560-S safety CPU and the PM5xx non-safety CPU
This application note describes the project configuration, programming details as well as verification and validation steps for the optional use of cyclic non-safe data exchange via DPRAM between the SM560-S safety CPU and PM5xx. A fast communication and/or transfer of large data volumes (> 84 Bytes) via DPRAM between the SM560-S safety CPU and the PM5xx non-safety CPU is needed in some customer-specific applications such as cranes, hoists, AGVs (automatic guided vehicles), etc. to synchronize process data on both CPUs. The solution described in the application note with SF_CYCLIC_PM5XX_S_SEND and SF_CYCLIC_PM5XX_S_REC FBs allows data exchange with up to 2 kByte of process data between a safety CPU and a non-safety CPU in every program cycle.

PLC training and support
AC500-eCo Starter kit

AC500-eCo Starter kit
The AC500-eCo Starter kit helps you to get familiar with ABB AC500 PLC offerings and the engineering tool within a very short time. Learn how to connect and setup the components provided in the starter kit and how to program the PLC by means of several simple example applications. The starter kit comes with CPU, programming cable, digital input simulator and getting started manual. The latest version of the engineering tool Automation Builder is available via download. The getting started manual is integrated in Automation Builder.

Easy to use
The AC500-eCo from ABB is a range of uniquely scalable PLCs offering you unrivalled cost effectiveness for modern industrial automation applications. The AC500-eCo integrates perfectly into the AC500 family - this provides you with the option to build customized solutions based on the standard S500 and S500-eCo I/O range.

Easy to learn
Offering all of the advantages you would expect from the AC500 family of devices, the AC500-eCo delivers an impressive set of powerful programming features. In addition, thanks to the fact that ABB uses a standard IEC61131-3 based programming system for the entire AC500 family, it is a snap to learn and configure.

Ordering data
Each kit consists of CPU, programming cable and digital input simulator. The engineering tool is available for download at www.abb.com/automationbuilder.

CPU module in the starter kit	Programming cable (included)	Type	Order code	Price	Weight (1 pce) kg

Cyber Security
Information

Introduction
Cyber Security is one of the most important topics for ABB and its customers. With the adoption of Industry 4.0 and IoT more and more devices are connected with each other. This is the reason why the security of industrial automation and control systems becomes more and more critical. ABB aims to protect the data, integrity and availability of all AC500 PLC products from I/O modules to the engineering software.

How ABB PLC products meet security challenges
ABB takes all necessary measures to continuously improve the security of its products. These measures follow commonly accepted industry standards and practices and include, where technically feasible:

- Robustness testing, including fuzzing and flooding
- Vulnerability scanning for known vulnerabilities and exploits
- Security testing, including static code analysis or binary code analysis.

We highly recommend that all software, firmware, libraries and applications are kept up to date using the most recent firmware and software updates to keep your system and environment secure.

Before any deployment of standard and functional safety applications with ABB PLC products, an assessment for dangerous threats such as eavesdropping or data manipulation shall be executed. The security measures will depend on the selected security standard for the given application and implemented on the overall system level, for example, IEC 62443-3-3 “Industrial communication networks – Network and system security” standard, can be used.

Additional information
For additional information and support, please contact your local ABB service organization.
For contact information, please write an email to plc.support@de.abb.com

AC31 adapter for retrofitting existing AC31 applications

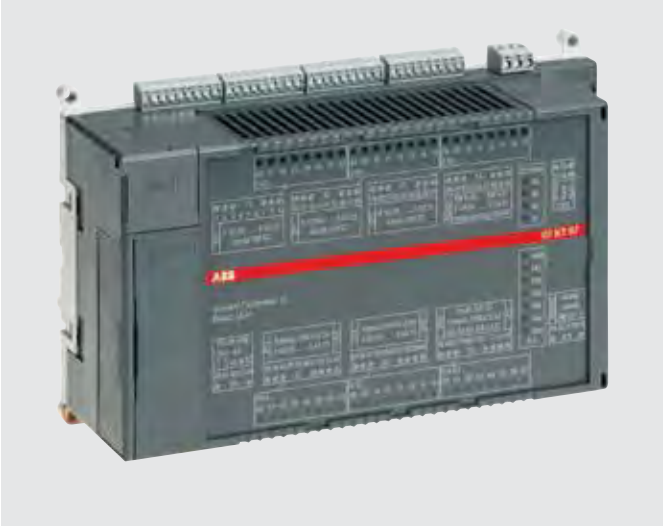
AC500 life cycle management

A long history
During more than 40 years in the PLC business, we have gained experience from hardwired, centralized and distributed PLCs to scalable PLCs. One of our previous product ranges, the AC31 series 90, was succeeded by the AC500 PLC platform.

For the protection of your investments and for ease of migration to the new AC500 PLC generation, ABB provides AC31 adapter modules based on AC500.

The modules have the same footprint, cabling and features as the previous AC31 series 90 products with up-to-date AC500 hardware.

AC31 adapter modules can replace existing AC31 devices with either direct compatible e.g. I/O modules or need adjustments with a new user program for the CPU using Automation Builder software.



Main characteristics and architecture
The connection locations do not differ from the predecessor hardware and the number or type of I/O channels are comparable. For remote I/O products on the CS31 bus, I/Os of an existing field application can be modified without having to change the application or configuration. New modules can be configured with DIP switches.

Replacing the AC31 PLC with the 07KT98-x-AD PLC requires only minor program modifications using the Automation Builder engineering suite.

Advantages at a glance
- Compatible with the existing AC31 series 90 remote I/O-modules, optionally with 1-to-1 replacement in the field, no change of application configuration required.
- Footprint identical to predecessor hardware.
- Automation Builder for PLC programming.
- Standard AC500 modules for seamless migration from AC31 to the new AC500.
- Longer life cycle of AC31 through migration to new solution.

Ordering details
For more information, please contact your local sales organization.

AC31 adapter for spare parts
AC500 life cycle management

Under certain conditions, the AC31 adapter I/O modules may be used as spare parts for existing applications where the previous AC31 modules were installed. The AC31 adapter modules can normally replace old modules without any changes in the configuration or application.

The new module is configured with DIP switches, the old one removed, the new one installed and the application started again.

The modules have the same footprint, cabling position and channel assignment. The AC31 adapter module supports most of the previous functionalities of the old module. There are only a few exceptions and minor differences that are listed below:

- The AC31 adapter I/O modules can only be used, supported and tested with ABB AC31 master devices and cannot run with third party controllers.
- The AC31 adapter modules are based on standard AC500 I/O modules and on a specific electronic base, the modules cannot be purchased separately and are always delivered as complete devices. The pluggable electronic module cannot be replaced separately without the base.

For special applications, further details or specific questions regarding compatibility, please contact your local sales organization.

Replacement table and compatibility information

Previous AC31 I/O module			New AC31 adapter module			
PN	**Type designation**	**I/O combination**	**PN**	**Type designation**	**I/O combination supported**	**Difference in feature / feature not supported**
GJR5251400R0202	07DC91	16DI/8DO/8DC	1SAP800300R0010	07DC91-AD	16DI/16DC	No local test button, compatible with basic diagnostics only.
GJR5252200R0202	07DC92	32DC	1SAP800500R0010	07DC92-AD	32DC	Same electrical potential for all channels (no group isolation), input current only max. 2 mA per channel, max. 8 A current sum for all outputs, no local test button, compatible with basic diagnostics only.

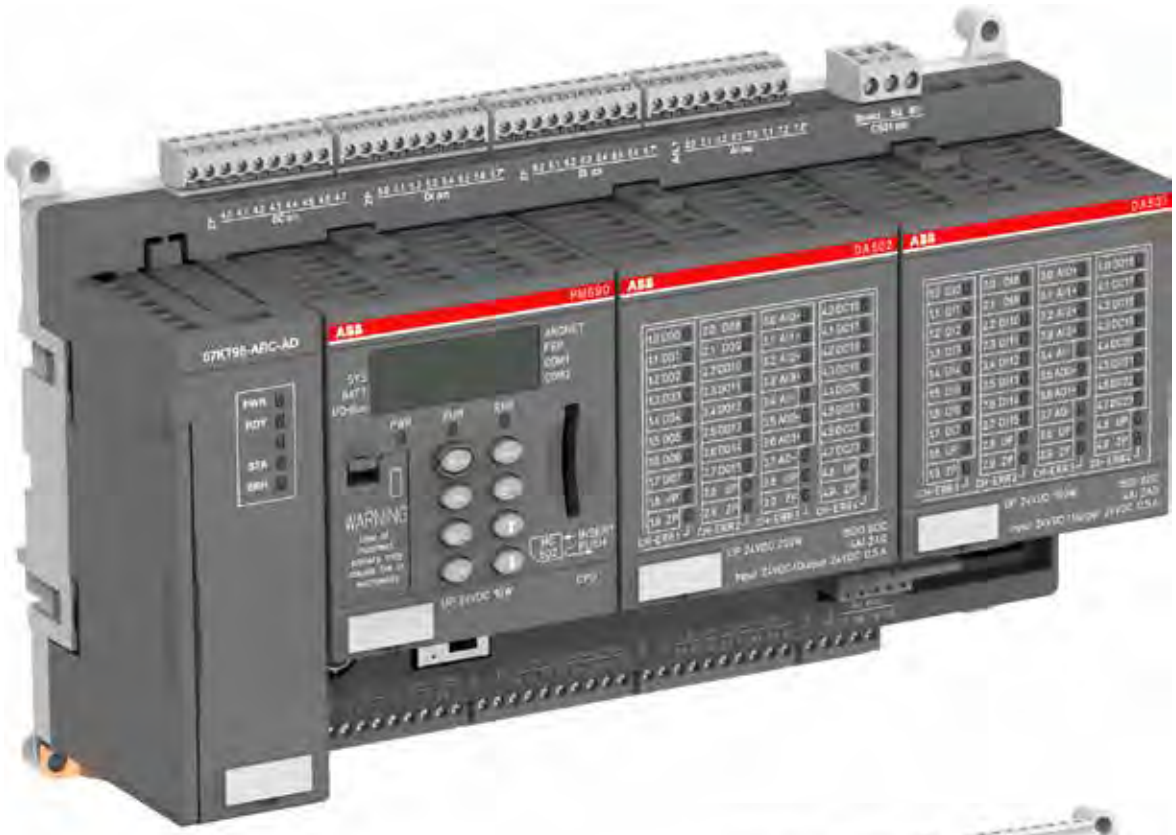
GJR5252300R0101	07AC91	16 AC or 8 AI/8 AO	1SAP800000R0010	07AC91-AD	16AO	No 16 AI inputs but only 16 AO in 16 AC configuration, no local test button, compatible with basic diagnostics only.
			1SAP800100R0010	07AC91-AD2	8AI/8AO	No local test button, compatible with basic diagnostics only.



Additional information
Services

Pre-purchase → **Order and delivery** → **Installation and commissioning** → **Operation and maintenance** → **Upgrade and retrofit** → **Replacement and recycling**

Services offered for ABB's automation products span the entire asset lifetime, from the moment a customer makes the first inquiry to disposal and recycling of the product. Throughout the life cycle of an asset, ABB provides training, technical support and customized contracts, supported by one of the world's most extensive global sales and service networks.

Pre-purchase
ABB provides a range of services and support guiding the customers to the ideal products for their applications.

Order and delivery
Orders can be placed at any ABB office or channel partner. In some countries, ABB also offers an online order tracking system. ABB's sales and service network ensures timely deliveries and also offers express delivery.

Installation and commissioning
While many customers have the resources to perform installation and commissioning on their own, ABB and its channel partners also offer professional installation and start-up services if requested.

Operation and maintenance
From maintenance assessments, preventive maintenance, reconditioning of spare parts and repairs on-site or in workshops, ABB has all the options covered to keep their customers' processes operational.

Upgrade and retrofit
Frequently, ABB products can often be upgraded to the latest software or hardware in order to improve the performance of the application. Existing processes can be economically modernized by retrofitting with up-to-date technology.

Replacement and recycling
ABB provides assistance in the best replacement of products while ensuring disposal and recycling observing the local environmental regulations.

Additional information
Life cycle management

Product life cycle management model
ABB has developed a PLC life cycle management model aimed at providing proactive services for maximizing availability and performance. This model not only provides optimum support to end-users but also a smooth transition to a new product when the PLC has come to the end of its lifetime.

The life cycle management model divides a product's life cycle into four phases: active, classic, limited and obsolete. Each phase has different implications for the end-user in terms of services provided.

Active phase
The active phase starts when the product is launched. In the active phase the end user benefits from different warranty options and other services such as training and technical support. Complete life cycle services from spare parts and maintenance are also provided. The active phase ends when the volume production of a particular PLC ceases and ABB issues an announcement of the life cycle phase change.

Classic phase
ABB PLC users continue to benefit from complete life cycle services throughout the classic phase. The classic phase is closely aligned with ABB's research and development work to provide continuing support for its PLC products while developing future generations. In the classic phase new hardware and software development may be required to provide the maintenance techniques and upgrades needed to guarantee that the PLC continues to operate at its peak performance. Migration to a new PLC product is recommended before the product has entered the limited phase.

Limited phase
In the limited phase the product development has come to its end. Spare parts are available as long as components and materials can be obtained. Towards the end of the limited phase, services gradually become obsolete. In addition to the annual life cycle status reviews, ABB issues a life cycle phase change announcement, half a year prior the product becoming obsolete. This is the last opportunity to transfer to new technology before product services end.

Obsolete phase
The product is transferred to the obsolete phase when it is no longer possible to provide services at reasonable cost or when ABB can no longer support the product technically or the old technology is not available.

Benefits of life cycle management
PLC life cycle management maximizes the value of the equipment and its maintenance investments by:
- ensuring spare parts and ABB competence availability throughout the lifetime
- enabling efficient product support and maintenance for improved reliability
- adding functionality to the initial product by upgrading or retrofitting
- providing a smooth transition to new technology at the end of the product lifetime.

For more information, please see www.abb.com/plc or contact your local sales organization.

Automation Builder product life cycle plan

Product life cycle
ABB is committed to supporting our customers' installed system base. We want to optimize our customers' system investment and provide our customers with the confidence that there is a well-defined support and a path forward for existing ABB systems. ABB's product life cycle policy provides advanced notification of planned changes in product availability and support.

This chapter shall not be understood as legally binding. Users are recommended to keep informed about updates by periodically checking relevant life cycle information.

Predictive releases – continuous delivery
ABB continuously maintains and improves its software products. As part of this effort, we develop and release major versions, minor versions and service releases.

Major and minor releases focus on new features whereas service releases deliver corrections and quality improvements. A new service release supersedes and replaces existing service releases within the same major/minor release. All releases contain corrections to issues either identified in ABB test labs or reported by our customers.

Release Type	Designation example	Purpose and frequency
Major Release	1.x, 2.x	Deliver new features extending Automation Builder scope
Minor Releases	1.1.x, 1.2.x	Deliver new features within current Automation Builder scope
Service Releases	1.2.1, 1.2.2	Deliver corrections, improvements and updates of existing components

ABB aims for continuous, consistent and coordinated delivery of engineering tool versions and device firmware versions. It is recommended to always use the latest release of Automation Builder.

Version profiles – compatibility with installed base
ABB aims at maximizing availability and performance of the installed base. In this effort we follow these two principles: The engineering tool shall provide the latest features in best quality. The engineering tool and installed base shall always be compatible.

To meet these requirements Automation Builder introduced version profiles. A version profile contains all Automation Builder software components as released in the latest service release of a specific major/minor version, including respective device firmware versions.

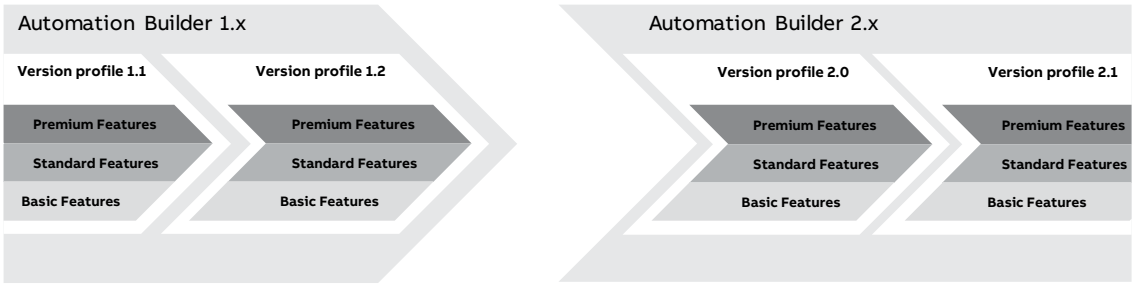
Version profiles can be installed with every release of Automation Builder. Multiple version profiles can be installed in parallel. Each version profile goes through all product life cycle phases. Life cycle statements apply to each version profile and corresponding licenses. The availability of a version profile depends on the life cycle phase it is currently in.

All this allows our users to install the latest version of Automation Builder and keep compatibility with the installed base. Updates of the runtime system are avoided. The latest Automation Builder release always contains the best quality for all profiles. Corrections are distributed via releases and not via hard to track patches.

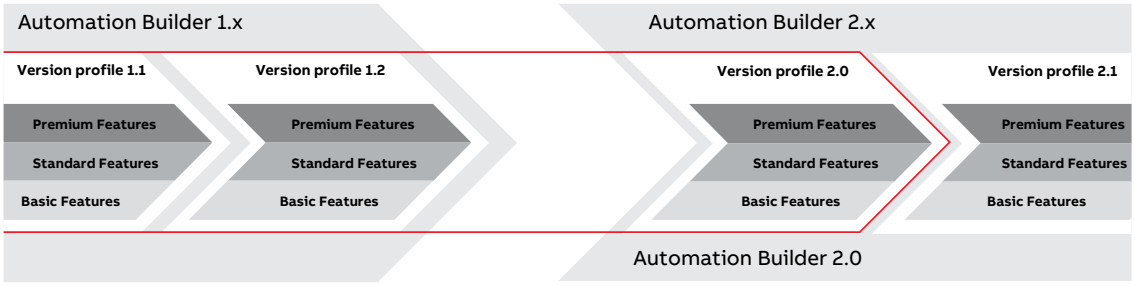
Automation Builder life cycle management model
The Automation Builder life cycle management model aims to provide service for maximizing availability and performance, support to end-users and a smooth transition to new product versions when the service life of the current product ends. The model divides a product's life cycle into four phases: active, classic, limited and obsolete. Each phase has different implications for the end-user in terms of software and license availability, services and support provided.

Active	The software product with complete life cycle services is available.
Classic	The software product with complete life cycle services is available for system extensions and spare part engineering.
Limited	The software product is available without maintenance and further corrections. Migration to a newer version is recommended.
Obsolete	Migration to a newer version is recommended.

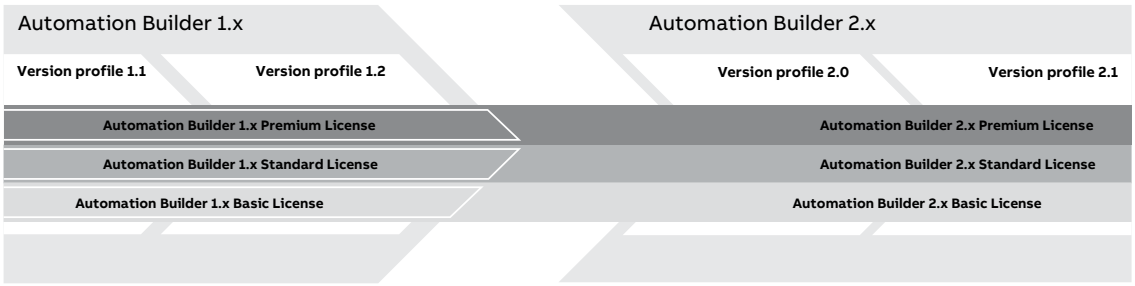
01



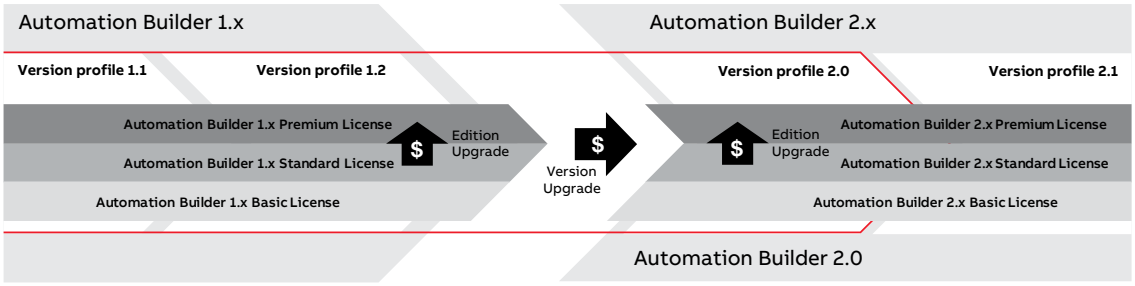
02



03



04



Version profiles and licenses

01 – Major versions come in several minor versions, e.g. Automation Builder 1.x comes as Automation Builder 1.1 and 1.2. Version profiles cover different sets of features, e.g. basic, standard and premium feature sets.

02 – An Automation Builder release contains multiple version profiles, each corresponding to a released minor version. E.g. release Automation Builder 2.0 contains version profile 2.0, 1.2, 1.1 and more.

03 – To use a feature a license is required. The license defines which feature set can be used, e.g. a premium license enables you to use the premium feature set. A license corresponds to a major version of Automation Builder, e.g. Automation Builder 2.x Premium license enables to use Premium features in all 2.x minor versions and in all previous versions.

04 – There are two different cases where you have to purchase a new Automation Builder license:

- Edition upgrade: Commercial upgrade from one license option to a higher value license option within the same major version of Automation Builder, e.g. Automation Builder 1.x Standard to Premium.
- Version upgrade: Commercial upgrade from one major Automation Builder version to another, e.g. Automation Builder 1.x to 2.x. – Note: Licenses for Automation Builder 1.x and Automation Builder 2.x can be used in parallel in order to support different version profiles.

Additional information
Automation Builder product life cycle plan

Life cycle phases

Active
A newly released version profile of Automation Builder starts in life cycle phase Active. During the Active phase the version profile is available with complete life cycle services.

This means the version profile is available via Automation Builder installation manager from abb.com and will receive ABB's normal product maintenance including enhancements and corrections, and third party software updates.

The version is the base for current sales and active price list. Licenses can be purchased. Support and training is provided.

Classic
With release of the next major/minor version the predecessing version profile is going into life cycle phase Classic. During the Classic phase, the version profile with complete life cycle services is available for system extensions and spare part engineering.

Classic version profiles are available via Automation Builder installation manager from abb.com and will receive corrections only for critical issues. Classic version profiles are typically available as released in the latest respective service release (and additional corrections). New 3rd party products (e.g. OS) are not supported anymore.

Licenses can be purchased (some exceptions apply – see "Classic-Limited"). Training is not available anymore. Support is provided.

Classic-Limited
The Classic-Limited phase corresponds to the Classic phase with the following limitations: Corrections might be available upon request as billable service. Licenses are typically not available anymore but might be available upon request as spare part.

Limited
During the Limited phase, the version profile is available without maintenance and further corrections. Migration to a newer version is recommended.

This means it is no longer available from Automation Builder installation manager from abb.com, but could be obtained as offline installations via support. Corrections might be available upon request as billable service. New 3rd party products (e.g. OS) are not supported anymore.

Licenses are typically not available anymore but might be available upon request as spare part. Training is not available anymore. Support is provided.

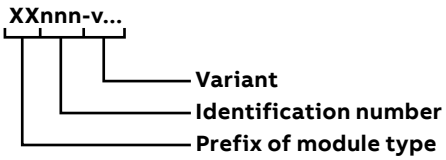
Obsolete
When entering the Obsolete phase, the version profile is not supported anymore. Migration to a newer version is strongly recommended.

This means it is not available anymore for installation. It will not receive corrections anymore.

Licenses are not available for purchase anymore. Training is not available anymore. Support is not available anymore.

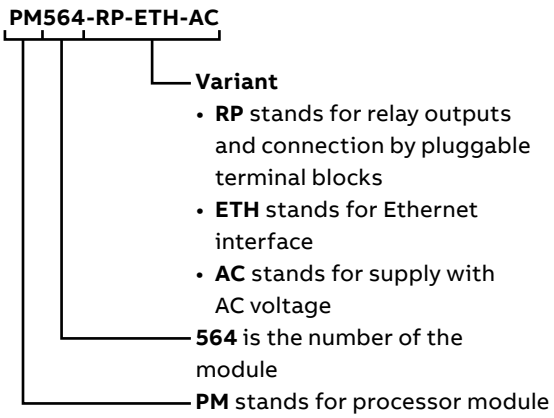
Additional information

Generic composition of type designation



The identification number starts with 5 for the AC500 PLC platform or 6 for the CP600 HMI platform.

Example: AC500-eCo central processing unit



Prefix of module types

Letters	Meaning
AI	Analog input module
AO	Analog output module
AX	Analog input/output module (X stands for mixed input/output)
CD	Counter module
CI	Communication interface module for remote I/O station
CM	Communication module attached to the CPU
CP	Control panel (HMI)
DA	Mixed analog/digital input/output module
DC	Digital I/O module with channels configurable as inputs or outputs
DI	Digital input module
DM	PLC engineering software Automation Builder or add-ons
DO	Digital output module
DX	Digital input/output module (X stands for mixed input/output)
FM	Function module
MC	Memory card or memory card adapter
PB	Panel Builder engineering software for HMI
PM	PLC CPU module
PS	Application-specific function block libraries
SM	Safety CPU module
TA	Accessories and training cases
TB	Terminal base for CPU modules
TF	Terminal base for CPU with function modules
TK	Communication cable
TU	Terminal unit for I/O modules
