New Modicon TM3 Bus Coupler module

Alan Grightmire, Senior Offer Manager

Industry Applied Offer Product Marketing is pleased to announce the launch of the new **Modicon TM3 Bus Coupler**.

The TM3 Bus Coupler enables the creation of separate groups of industrial TM3 I/Os, each positioned as a near to the machine as possible, that are managed by a master controller via a fieldbus.

One commercial reference is ready to use: **TM3BCEIP** for EtherNet/IP & Modbus TCP

The TM3 Bus Coupler is part of the Modicon M262 platform which embeds cybersecurity features and encryption protocols to provide direct cloud connectivity and digital services thanks to its multiple independent embedded Ethernet ports.

Main Features:

- Full & Simple Integration: with Modicon M221, M241, M251 & M262 Controller
- Digitization: WebServer embedded, Cybersecurity and Discovery service
- Connectivity: 2 Isolated RJ45 ports, USB Port, EtherNet/IP, Modbus/TCP support, CANopen & Modbus Serial Line support.
- Used in “3rd party” controller architectures

Customer Benefits:

- Saves cabinet space
- Simple integration
- Easy to use
- Optimized price for just enough needs
- Reduce cabling & installation costs
