Use of linear guide provides rigid, The slide table comes with a built-in

Rigid, compact, and lightweight

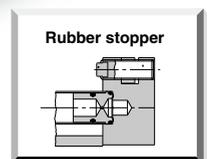

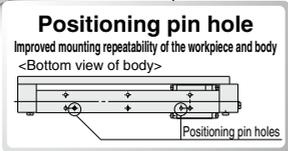

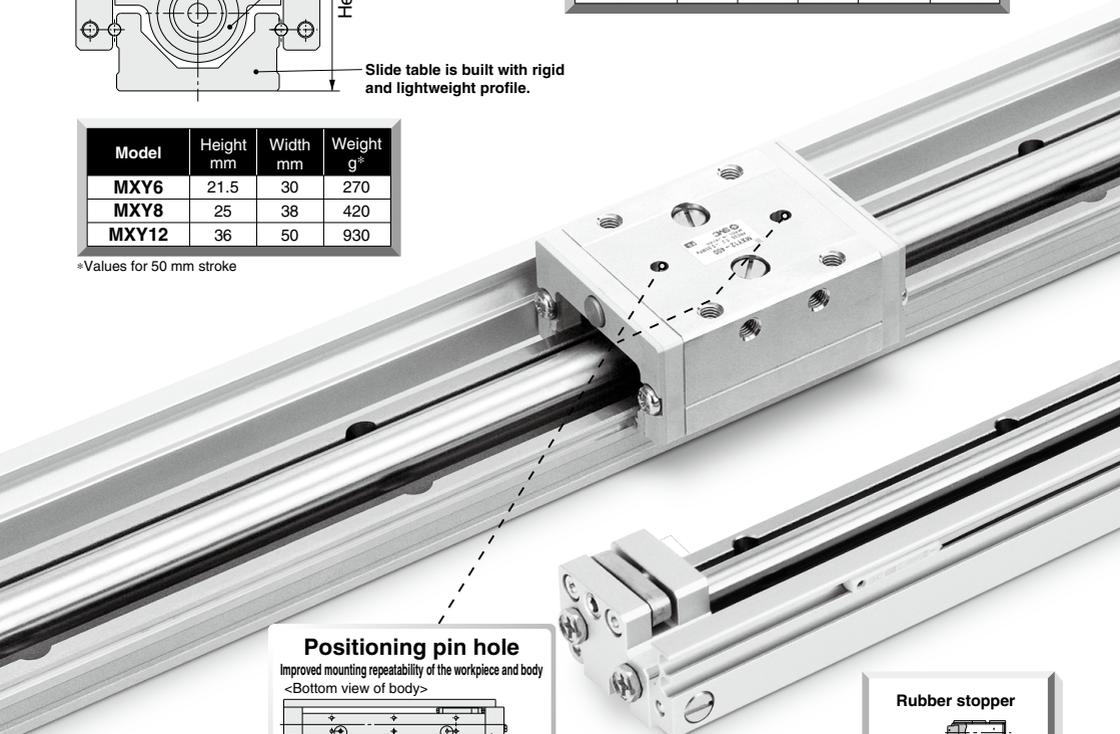

Compact design with higher allowable moment compared to MXY8/MXW8

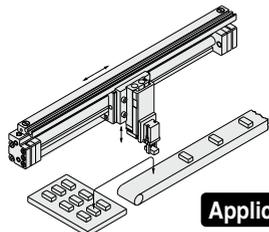

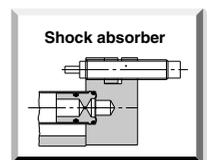

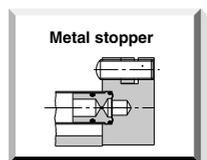

Model	Height mm	Width mm	Weight g	Allowable moment N·m		
				Pitch, Yaw	Roll	
MXY8-50	25	47	420	5.7	13	
MXW8-50	30	49	610	5	3	
MXY/MXW	0.8 times	0.95 times	0.7 times	1.14 times	4 times	

Model	Height mm	Width mm	Weight g*
MXY6	21.5	30	270
MXY8	25	38	420
MXY12	36	50	930

*Values for 50 mm stroke

Adjuster options

Application Example

compact, and lightweight design. magnetically coupled rodless cylinder.

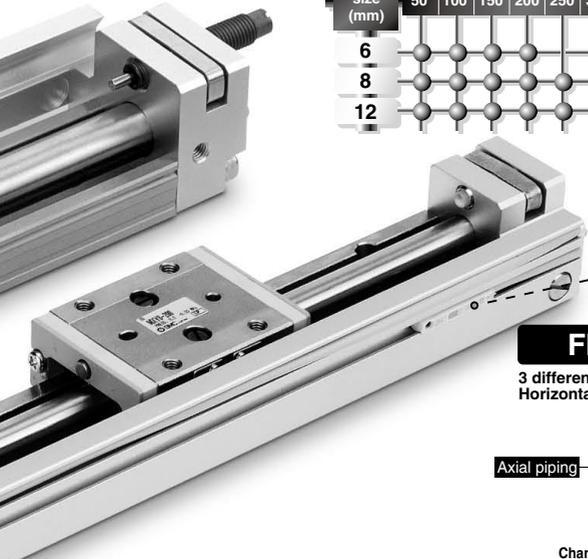

Long stroke

MXY12—Max. stroke 400 mm

Series variations

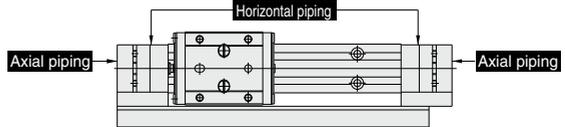

Bore size (mm)	Stroke							Adjuster options			Function options	
	50	100	150	200	250	300	350	400	Rubber stopper	Shock absorber	Metal stopper	Piping concentrated on one side of the switch rail
6	●	●	●	●	●	●	●	●	●	●	●	●
8	●	●	●	●	●	●	●	●	●	●	●	●
12	●	●	●	●	●	●	●	●	●	●	●	●

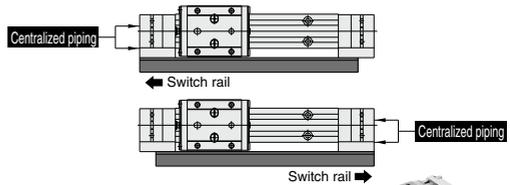

Auto switch mounting
Three types of auto switches can be mounted.
Solid state auto switch: M9 type
Reed auto switch: A9 type
2-color indicator solid state auto switch: M9□W type

Flexible Piping

3 different piping directions are available:
Horizontal piping, axial piping, and centralized piping

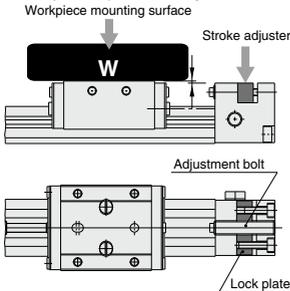

Changing the mounting position of the switch rail, which also used as an air passage can change the direction of the centralized piping.

Stroke adjuster

The stroke adjuster does not protrude from the mounting surface of the workpiece mounting surface, allowing high flexibility in workpiece mounting.

Using lock plates to securely lock the adjustment bolt with minimal force.

MXP Series

Compact air slide table that comes with linear guide with built-in cylinder.

Model Selection 2

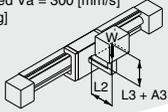

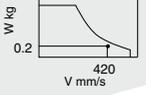

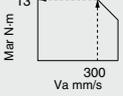

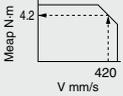

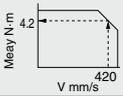

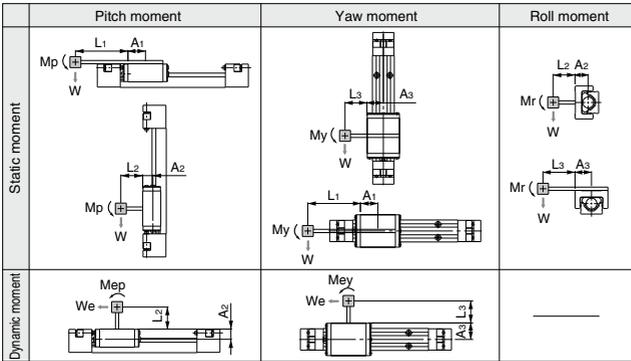

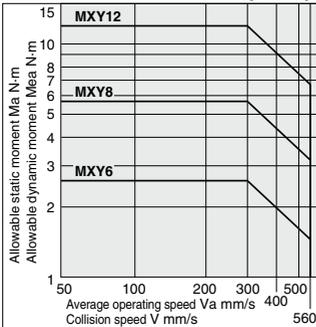

Model Selection Step	Formula/Data	Selection Example
<p>1 Operating Conditions</p> <p>Enumerate the operating conditions considering the mounting position and workpiece configuration.</p>	<ul style="list-style-type: none"> • Model to be used • Type of cushion • Mounting orientation • Average operating speed V_a (mm/s) • Load mass W (kg) • Overhang L_n (mm) 	<p>Cylinder: MX_Y8-100 Cushion: Rubber stopper Mounting: Horizontal wall mounting Average operating speed $V_a = 300$ [mm/s] Load mass: $W = 0.2$ [kg] $L_2 = 40$ mm $L_3 = 50$ mm</p> 
<p>2 Load Mass</p> <p>Find the collision speed V (mm/S)</p> <p>Confirm that the load mass W (kg) does not exceed the value in the graph.</p>	<p>$V = 1.4 \cdot V_a$ * Correction factor (Reference value)</p> <p>Graph (1)</p>	<p>$V = 1.4 \times 300 = 420$</p> <p>Confirm that $V = 420$ and $W = 0.2$ do not exceed the values in Graph (1).</p> <p>Applicable because it does not exceed the value in Graph (1).</p> 
<p>3 Load Factor</p>		
<p>3-1 Load Factor of Static Moment</p> <p>Find the static moment M (N-m).</p> <p>Find the allowable static moment M_a (N-m).</p> <p>Find the load factor α_1 of the static moment.</p>	<p>$M = W \times 9.8 (L_n + A_n)/1000$ Corrected value of moment center position distance A_n: Table (1)</p> <p>Pitch, Yaw moment: Graph (2)</p> <p>Roll moment: Graph (3)</p> <p>$\alpha_1 = M/M_a$</p>	<p>Examine M_r. $M_r = 0.2 \times 9.8 (40 + 15.5)/1000 = 0.1$ $A^2 = 15.5$ Obtain $M_{ar} = 13$ from $V_a = 300$ in Graph (3).</p> <p>$\alpha_1 = 0.1/13 = 0.008$</p> 
<p>3-2 Load Factor of Dynamic Moment</p> <p>Find the dynamic moment M_e (N-m).</p> <p>Find the allowable dynamic moment M_{ea} (N-m).</p> <p>Find the load factor α_2 of the dynamic moment.</p>	<p>$M_e = 1/3 \cdot W_e \times 9.8 (L_n + A_n)/1000$ Mass equivalent to impact $W_e = \delta \cdot W \cdot V$ δ: Bumper coefficient Rubber stopper screw: 4/100 Shock absorber: 1/100 Metal stopper screw: 16/100 Corrected value of moment center position distance A_n: Table (1)</p> <p>Pitch, yaw moment: Graph (2)</p> <p>$\alpha_2 = M_e/M_{ea}$</p>	<p>Examine M_{ep}. $M_{ep} = 1/3 \times 3.36 \times 9.8 \times (40+15.5)/1000 = 0.61$ $W_e = 4/100 \times 0.2 \times 420 = 3.36$ $A^2 = 15.5$ Obtain $M_{eap} = 4.2$ from $V = 420$ in Graph (2).</p> <p>$\alpha_2 = 0.61/4.2 = 0.15$</p> <p>Examine M_{ey}. $M_{ey} = 1/3 \times 3.36 \times 9.8 \times (50+19)/1000 = 0.76$ $W_e = 3.36$ $A^3 = 19$ Obtain $M_{eay} = 4.2$ from $V = 420$ in Graph (2).</p> <p>$\alpha_2' = 0.76/4.2 = 0.18$</p>  
<p>3-3 Sum of the Load Factors</p> <p>Use is possible if the sum of the load factors does not exceed 1.</p>	<p>$\alpha_1 + \alpha_2 < 1$</p>	<p>$\alpha_1 + \alpha_2 + \alpha_2' =$ Applicable because $0.008 + 0.15 + 0.18 = 0.34 < 1$</p>

Fig. (1) Overhang: Ln (mm), Correction Value of Moment Center Position Distance: An (mm)

Note) Static moment: Moment generated by gravity
Dynamic moment: Moment generated by impact when colliding with stopper

Graph (2) Allowable Moment
Pitch Moment: $M_{p\alpha}$, M_{ep}
Yaw Moment: $M_{y\alpha}$, M_{ey}

Note) Use the average operating speed when calculating static moment.
Use the collision speed when calculating dynamic moment.

Graph (3) Allowable Moment
Roll Moment: $M_{r\alpha}$

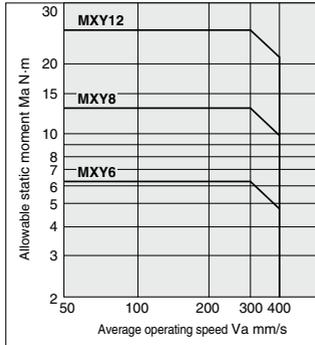

Table (1) Correction Value of Moment Center Position Distance: An (mm)

Model	Corrected value of moment center position distance (Refer to Figure 2.)		
	A ₁	A ₂	A ₃
MX Y6	16	14	15
MX Y8	20	15.5	19
MX Y12	26	23.5	25

Table (3) Maximum Allowable Moment: Mmax (N·m)

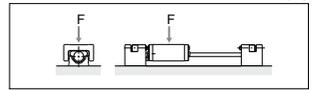

Model	Pitch/Yaw moment: $M_{p\alpha}/M_{y\alpha}$	Roll moment: $M_{r\alpha}$
MX Y6	2.6	6.2
MX Y8	5.7	13
MX Y12	12	28

The above value represents the maximum value of allowable moment. For the maximum allowable moment for each piston speed, please refer to Graph (2) and (3).

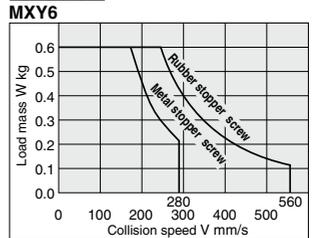

Symbol

Symbol	Definition	Unit	Symbol	Definition	Unit
An (n = 1 to 3)	Corrected value of moment center position distance	mm	F	Allowable static load	N
Ln (n = 1 to 3)	Overhang	mm	V	Collision speed	mm/s
M (Mp, My, Mr)	Static moment (pitch, yaw, roll)	N·m	Va	Average operating speed	mm/s
Ma (Map, May, Mar)	Allowable static moment (pitch, yaw, roll)	N·m	W	Load mass	kg
Me (Mep, Mey)	Dynamic moment (pitch, yaw)	N·m	Wa	Equivalent mass for impact	kg
Mea (Meap, Meay)	Allowable dynamic moment (pitch, yaw)	N·m	Wmax	Max. allowable load mass	kg
Mmax (Mpxmax, Mymax, Mrmax)	Max. allowable moment (pitch, yaw, roll)	N·m	α	Load factor	—

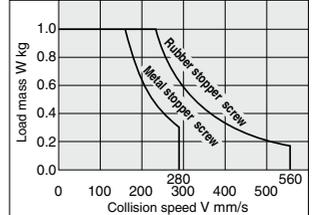

Fig. (2) Allowable Static Load: F(N)

Graph (1) Load Mass: W

MX Y6

MX Y8

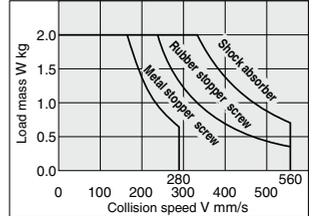

Table (4) Allowable Static Load: F (N)

Model	Allowable static load
MX Y6	580
MX Y8	980
MX Y12	1600

The above value represents the applicable load at the position where the moment does not work at the time of stop. Factors such as impact, etc. are not in consideration with the value.

*1 Water resistant type auto switches can be mounted on the above models, but in such case SMC cannot guarantee water resistance.
 *2 1 m type lead wire is only applicable to D-A93.
 * Lead wire length symbols: 0.5 m..... Nil (Example) M9NW * Solid state auto switches marked with "○" are produced upon receipt of order.
 1 m..... M (Example) M9NWM
 3 m..... L (Example) M9NWL
 5 m..... Z (Example) M9NWZ
 * Refer to page 369 for applicable auto switches in addition to those listed above.
 * For details on auto switches with a pre-wired connector, refer to pages 1192 and 1193.
 * Auto switches are shipped together (not assembled).

Specifications

Model	MX _Y 6	MX _Y 8	MX _Y 12
Bore size (mm)	6	8	12
Port size	M5 x 0.8		
Fluid	Air		
Action	Double acting (type)		
Operating pressure	0.2 to 0.55 MPa		
Proof pressure	0.83 MPa		
Ambient and fluid temperature	-10 to 60°C		
Operating speed range (Average operating speed) ^{Note 1)}	50 to 400 mm/s ^{Note 2)} Metal stopper: 50 to 200 mm/s		
Cushion	Rubber bumper Shock absorber ^{Note 3)} (option, not available on MX _Y 6, MX _Y 8) None (with metal stopper)		
Lubrication	Non-lube (equipment), unlubricated		
Stroke adjuster	Standard		
Stroke adjustment range	Rubber stopper	One side 0 to 5 mm	
	Shock absorber	—	One side 0 to 15 mm
	Metal stopper	One side 0 to 5 mm	
Auto switch	Reed auto switches (2-wire, 3-wire) Solid state auto switches (2-wire, 3-wire) 2-color indicator solid state auto switches (2-wire, 3-wire)		
Stroke length tolerance	+ ₀ ⁻¹ mm		

Note 1) Average operating speed: Speed that the stroke is divided by a period of time from starting the operation to reaching the end.

Note 2) When the smooth operation is required in a low speed range of 80 mm/s or less, contact SMC.

Note 3) The shock absorber service life is different from that of the MX_Y cylinder depending on operating conditions. Refer to the Specific Product Precautions for the replacement period.

Theoretical Output

Moisture Control Tube IDK Series

When operating an actuator with a small diameter and a short stroke at a high frequency, the dew condensation (water droplet) may occur inside the piping depending on the conditions.

Simply connecting the moisture control tube to the actuator will prevent dew condensation from occurring. For details, refer to [the IDK series in the Best Pneumatics No. 6](#).

MX_Y Series

Made to Order: Individual Specifications 1

Please contact SMC for detailed dimensions, specifications and lead times.

1 PTFE Grease Symbol -X7

MX_Y Standard model no. — X7
 ↓
 PTFE grease

PTFE grease is used for all parts that grease is applied.

Specifications

Type	PTFE grease
Bore size (mm)	6, 8, 12

* Dimensions other than the above is the same as the standard type.

⚠ Warning

Precautions

Be aware that smoking cigarettes, etc. after your hands have come into contact with the grease used in this cylinder can create a gas that is hazardous to humans.

2 Grease for Food Processing Machines Symbol -X9

MX_Y Standard model no. — X9
 ↓
 Grease for food processing machines

Grease for food processing machines is used for all parts that grease is applied.

Specifications

Type	Grease for Food Processing Machines (NSF-H1 certified)/Aluminum Complex Soap Base Grease
Bore size (mm)	6, 8, 12

* Dimensions other than the above is the same as the standard type.

⚠ Caution

Do not use this cylinder in a food-related environment.

<Cannot be mounted>

Food zone

Food may directly contact with this cylinder, and is treated as food products.

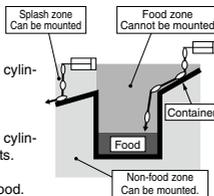

<Can be mounted>

Splash zone

Food may directly contact with this cylinder, but is not treated as food products.

Non-food zone

This cylinder do not directly contact food.

3 Fluororubber Seal Symbol -X39

MX_Y Standard model no. — X39
 ↓
 Fluororubber seal

Change the materials for the piston seal, cylinder scraper, O-rings and scrapers (rubber lined parts) to fluororubber.

Specifications

Type	Fluororubber seal
Bore size (mm)	6, 8, 12
Seal material	Fluororubber

* Dimensions other than the above is the same as the standard type.

370

4 Anti-corrosive Specifications for Guide Unit Symbol -X42

MX_Y Standard model no. — X42
 ↓
 Anti-corrosive specifications for guide unit

Martensitic stainless steel is used for the rail and guide block. Use this treatment if more effective anti-corrosive measures are necessary. Anti-corrosive treatment is applied to the rail and guide block.

Specifications

Type	Anti-corrosive guide unit
Bore size (mm)	6, 8, 12
Surface treatment	Special anti-corrosive treatment (2)

* 1 Dimensions other than the above is the same as the standard type.
 * 2 The special anti-corrosive treatment turns rail and guide block black.

5 EPDM Seal Symbol -X45

MX_Y Standard model no. — X45
 ↓
 EPDM seal

Change the materials for the piston seal, cylinder scraper, O-rings and scrapers (rubber lined parts) to EPDM.

Specifications

Type	EPDM seal
Bore size (mm)	6, 8, 12
Seal material	EPDM
Grease	PTFE grease

* Dimensions other than the above is the same as the standard type.

⚠ Warning

Precautions

Be aware that smoking cigarettes, etc. after your hands have come into contact with the grease used in this cylinder can create a gas that is hazardous to humans.

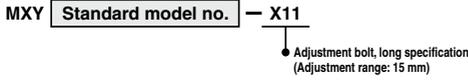

MX_Y Series

Made to Order: Individual Specifications 2

Please contact SMC for detailed dimensions, specifications and lead times.

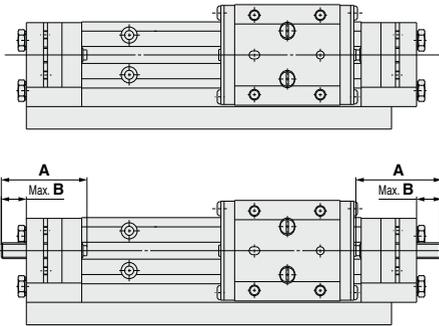

6 Adjustment Bolt, Long Specification (Adjustment range: 15 mm) **-X11**

* -X11 is not available for those with a shock absorber.
The average adjusting stroke range was extended from 5 mm to 15 mm with a long adjustment bolt.

Dimensions

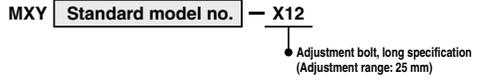

Rubber Stopper (mm)

Model	A	B
MX_Y6	32.5	10
MX_Y8	32.5	10
MX_Y12	33	10

Metal Stopper (mm)

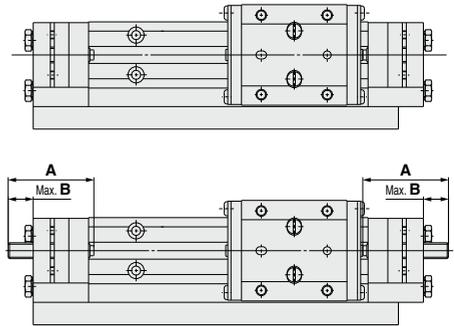

Model	A	B
MX_Y6	32.5	10
MX_Y8	32.5	10
MX_Y12	33	10

7 Adjustment Bolt, Long Specification (Adjustment range: 25 mm) **-X12**

* -X12 is not available for those with a shock absorber.
The average adjusting stroke range was extended from 5 mm to 25 mm with a long adjustment bolt.

Dimensions

Rubber Stopper (mm)

Model	A	B
MX_Y6	42.5	20
MX_Y8	42.5	20
MX_Y12	43	20

Metal Stopper (mm)

Model	A	B
MX_Y6	42.5	20
MX_Y8	42.5	20
MX_Y12	43	20

Specific Product Precautions 1

Be sure to read this before handling the products.

Refer to back page 50 for Safety Instructions and pages 3 to 12 for Actuator and Auto Switch Precautions.

Selection

⚠ Caution

1. Use a load within a range that does not exceed the operating limit.

Select models based on the maximum load weight and the allowable moment. Refer to model selection on pages 359 to 361 for detailed methods. If operated beyond the operating limit, the eccentric load applied to the guide section will be excessive. This can have an adverse effect on service life due to vibration in the guide unit and loss of accuracy, etc.

2. When performing intermediate stops with an external stopper, employ measures to prevent lurching.

If lurching occurs damage can result. When making a stop with an external stopper to be followed by continued forward movement, first supply pressure to momentarily reverse the table, then retract the intermediate stopper, and finally apply pressure to the opposite port to operate the table again.

3. In vertical operation, it is not possible to stop the piston at an intermediate position using a closed center solenoid valve, etc.

In vertical operation, it is not possible to stop the piston at an intermediate position using a closed center solenoid valve because it can cause dislocation of the magnet coupling. The only available option in such cases is use of an external stopper for an intermediate stop.

4. When stopping the piston using a closed center solenoid valve in horizontal operation, do not allow the kinetic energy exceed the allowable kinetic energy.

When stopping the piston using a closed center solenoid valve in horizontal operation, do not allow the kinetic energy of the load to exceed the values shown below. If the allowable value is exceeded, it can cause dislocation of the magnet coupling.

Model	Allowable kinetic energy for intermediate stop (J)
MX _Y 6	0.007
MX _Y 8	0.014
MX _Y 12	0.047

5. Do not operate in such a way that excessive external forces or impact forces are applied to the product.
This can cause damage.

6. Be careful in an application which requires precision in the middle of a stroke.

If straightness is required in the middle of a stroke, fix the entire rail mounting surface on the base.

Mounting

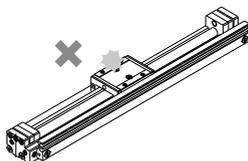

⚠ Caution

1. Do not scratch or gouge the mounting surfaces of the body, table and end plate.

This can cause loss of parallelism in the mounting surfaces, vibration in the guide unit and increased operating resistance, etc.

2. Do not scratch or gouge the transfer surfaces of the rail and guide.

This can cause vibration and increased operating resistance, etc.

3. Do not apply strong impacts or excessive moment when mounting workpieces.

Application of external forces greater than the allowable moment can cause vibration in the guide unit and increased operating resistance, etc.

4. Ensure that the parallelism of the mounting surface is 0.02 mm or less.

Poor parallelism of the workpiece mounted on the body, the base, and other parts can cause vibration of the guide unit and increased operating resistance, etc.

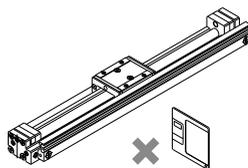

Mounting

⚠ Caution

5. For connection to a load that has an external support or guide mechanism, select an appropriate connection method and perform careful alignment.

6. Keep away objects which can be influenced by magnets.

A magnet is built inside the body or, in case of a type with auto switch, on the side of the guide lock. Please keep away magnetic disks, cards or tapes. Otherwise, the data can be deleted.

7. Do not attach magnets to the rail and guide block.

Since the body and table (guide block) are made of a magnetic substance, it could become magnetized if touched by a magnet, etc. This could cause auto switch malfunction.

MX_Y Series

Specific Product Precautions 2

Be sure to read this before handling the products.

Refer to back page 50 for Safety Instructions and pages 3 to 12 for Actuator and Auto Switch Precautions.

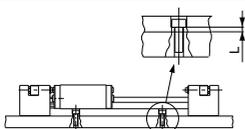

Mounting

⚠ Caution

8. When mounting the body, use screws of an appropriate length and do not exceed the maximum tightening torque.

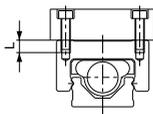

Tightening with a torque above the limit could cause malfunction. Whereas tightening insufficiently could result in misalignment or dropping.

Using through holes

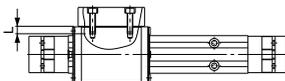

Model	Bolt	Max. tightening torque N·m	Rail thickness L (mm)
MX _Y 6	M2.5 x 0.45	0.65	1.5
MX _Y 8	M3 x 0.5	1.14	2
MX _Y 12	M4 x 0.7	2.7	2

Top mounting type

Model	Bolt	Max. tightening torque N·m	Max. screw-in depth L (mm)
MX _Y 6	M3 x 0.5	1.14	3
MX _Y 8	M4 x 0.7	2.7	4
MX _Y 12	M5 x 0.8	5.4	5

Side mounting type

Model	Bolt	Max. tightening torque N·m	Max. screw-in depth L (mm)
MX _Y 6	M3 x 0.5	1.14	3
MX _Y 8	M4 x 0.7	2.7	4
MX _Y 12	M5 x 0.8	5.4	5

9. Be careful not to bruise the outer surface of the cylinder tube.

If can damage the scraper and wear ring and result in malfunction.

10. Make sure that the magnet coupling is in position when operating.

In case it is displaced, please return it to the right position by pushing the external mover by hand (or pushing the piston mover with air pressure).

11. In vertical operation, be careful about dislocation of the magnet coupling.

Note that the mover may drop off due to dislocation of the magnet coupling if pressure or load beyond the specification is applied.

12. The positioning holes on the top surface of the guide block and those on the bottom of the rail are not aligned.

These holes are used when re-mounting the same product after having removed it for maintenance.

Operating Environment

⚠ Caution

1. Do not use in environments where there is direct exposure to liquids such as cutting oil.

Operation in environments where the body is exposed to cutting oil, coolant or oil mist can cause vibration, increased operating resistance and air leakage, etc.

2. Do not use in environments where there is direct exposure to foreign matter such as dust, dirt, chips and spatter.

This can cause vibration, increased operating resistance and air leakage, etc.

Do not use the product in the following conditions.

3. Provide shade in locations exposed to direct sunlight.

4. Block off sources of heat located near by.

When there are heat sources in the surrounding area, radiated heat may cause the product's temperature to rise and exceed the operating temperature range. Block off the heat with a cover, etc.

Operating Environment

⚠ Caution

5. Do not use in locations where vibration or impact occurs.

Do not use the product in such an environment as it can result in damage or malfunction.

6. Be careful about the corrosion resistance of the linear guide.

Be careful the rail and guide block use martensitic stainless steel, which is inferior to austenitic stainless steel in terms of corrosion resistance. Rust may result especially in an environment that allows water drops from condensation to stay on the surface.

Handling of Adjuster Options

Stroke adjuster

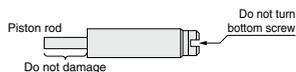

⚠ Caution

1. Do not replace the special adjusting bolt with other bolts.

This may cause looseness and damage due to impact forces, etc.

2. Use the tightening torque in the table below for the lock nut.

Insufficient torque will cause a decrease in the positioning accuracy.

Service Life and Replacement Period of Shock Absorber

⚠ Caution

1. Allowable operating cycle under the specifications set in this catalog is shown below.

1.2 million cycles RB08□

Note) Specified service life (suitable replacement period) is the value at room temperature (20 to 25°C). The period may vary depending on the temperature and other conditions. In some cases the absorber may need to be replaced before the allowable operating cycle above.

Specific Product Precautions 3

Be sure to read this before handling the products.

Refer to back page 50 for Safety Instructions and pages 3 to 12 for Actuator and Auto Switch Precautions.

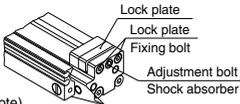

Stroke Adjustment

⚠ Caution

1. Adjustment method

Loosen the 2 lock plate fixing bolts (or shock absorbers) and rotate the adjustment bolt (or shock absorber) to adjust the stroke. Then tighten the lock plate fixing bolts evenly to secure the adjustment bolt (or shock absorber). Be careful not to tighten the lock plate adjusting bolts too firmly.

Model	Tightening torque of lock plate fixing bolt
MX _Y 6	0.1 N·m
MX _Y 8	0.2 N·m
MX _Y 12	0.4 N·m

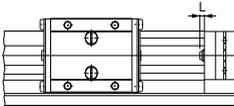

Note)

The lock plate may bend slightly due to tightening of the lock plate fixing bolts but it will not affect the adjustment bolt or shock absorber that has been secured.

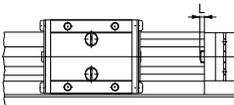

2. Adjustment range

Adjust the stroke within the range where the stopper or shock absorber works effectively. As a guideline, keep the stroke within the range where the L dimension in the figure below is larger than the value in the table. If the stroke exceeds this range, the guide lock will bump into the end plate, affecting the life time.

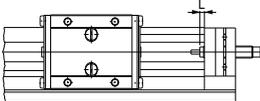

Model	L
MX _Y 6	2 mm
MX _Y 8	2 mm
MX _Y 12	2.5 mm

Rubber stopper screw

Metal stopper screw

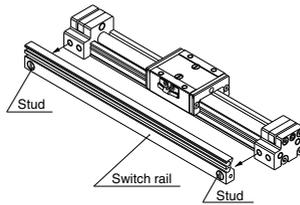

Shock absorber

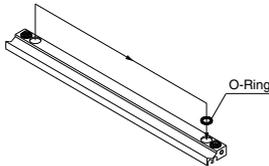

How to Change Concentrated Piping

The piping is concentrated on the left side at the time of shipment. To switch to the right side piping, follow the steps below.

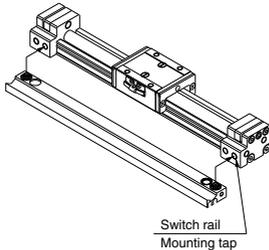

1. Loosen the 2 studs to remove the switch rail.

2. Change the position of the O-ring shown in the figure.

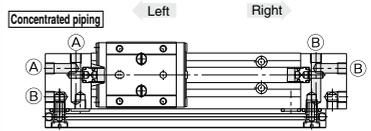

3. Fasten the stud onto the tap at the right side of the end plate and secure the switch rail.

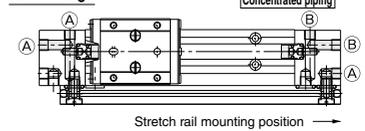

* Stud fastening: After a temporary tightening, tighten an additional 1/4 turn.

At the time of shipment

← Stretch rail mounting position

After change

Port	Actuation Direction
(A)	Right
(B)	Left

Disassembly and Maintenance

⚠ Warning

Be careful the magnets have a large absorption force.

Please pay enough attention when the external mover and piston mover are removed from the cylinder tube for maintenance, etc. Because the magnet mounted on each mover has a large adsorption force. Please refer to the disassembly instructions when disassembling the product.

⚠ Caution

1. Be careful if the external mover is removed in the normal condition, it will directly absorb the piston mover.

When removing the external mover or piston mover, first force the magnet coupling to go off the position to disable the holding power and then remove them separately. If they are removed in the normal condition, the magnets will directly absorb each other and will not go apart.

2. Never disassemble the magnet constructions (piston mover and external mover).

If it can cause a drop of the holding power or malfunction.
