Electric Actuator

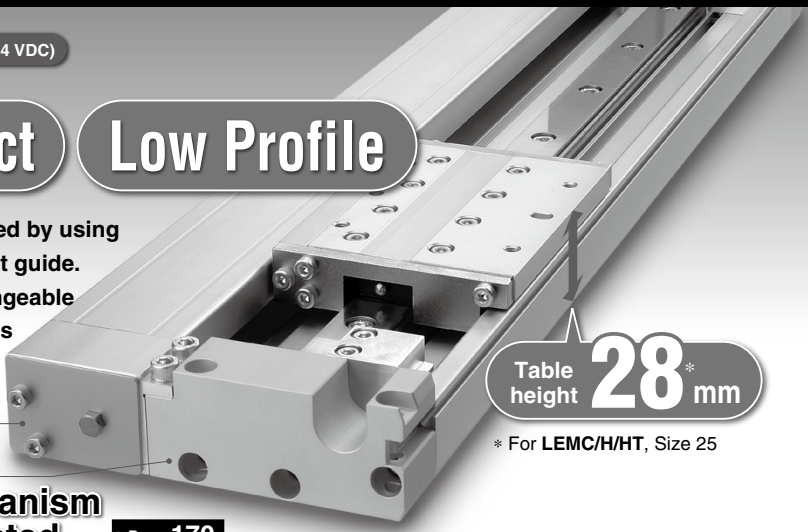
LEM Series

Low Profile/Slider Type

Step Motor (Servo/24 VDC)

Compact Low Profile

Table height reduced by using belt drive and offset guide. Mounting interchangeable with the E-MY series



* For **LEMC/H/HT**, Size 25

Guide mechanism can be selected.

Basic type

LEMB Series

- Light load transfer
- Combining with external guide
- Long stroke

Size	Work load [kg]
25	6
32	11

	Size	
	25	32
Stroke [mm]	2000	2000
Table height [mm]	40	40
Speed [mm/s]	1000	1000

Cam follower guide type

LEMC Series

- Workpiece direct mounting
- Long stroke

Size	Work load [kg]
25	10
32	20

	Size	
	25	32
Stroke [mm]	2000	2000
Table height [mm]	28	37
Speed [mm/s]	1000	1000

Linear guide single axis type

LEMH Series

- Workpiece direct mounting
- Provides more moment resistance than the cam follower guide type.
- High speed transfer

Size	Work load [kg]
25	10
32	20

	Size	
	25	32
Stroke [mm]	1000	1500
Table height [mm]	28	37
Speed [mm/s]	2000	2000

Linear guide double axis type

LEMHT Series

- Workpiece direct mounting
- Provides more moment resistance than the linear guide single axis type.
- High speed transfer

Size	Work load [kg]
25	10
32	20

	Size	
	25	32
Stroke [mm]	1000	1500
Table height [mm]	28	37
Speed [mm/s]	2000	2000

Selectable controllability (Controller)

- End to end operation similar to an air cylinder (12 intermediate stop positions)
- Easy position setting using numerical inputs

Step Motor (Servo/24 VDC)

▶Programless type
(With stroke study)
***LECP2* Series**
- **End to end operation similar to an air cylinder**
- 2 stroke end points + 12 intermediate points positioning
- Control panel setting
- Wire-saving design

▶Programless type
***LECP1* Series**
- 14 points positioning
- Control panel setting

▶Step data input type
***LECP6* Series**
- 64 points positioning

▶CC-Link direct input type
LECPMJ* Series

▶EtherCAT®/EtherNet/IP™/ PROFINET/DeviceNet™/ IO-Link direct input type
***JXCE1/91/P1/D1/L1* Series**

* Not applicable to CE.

Specialized for LEM Series

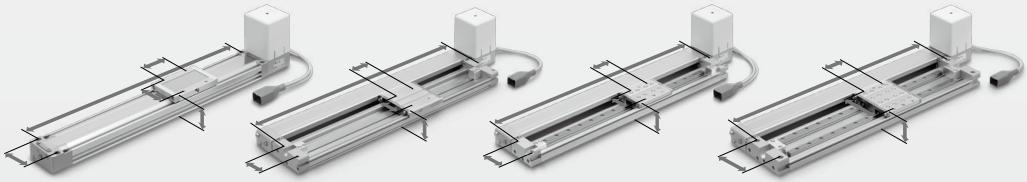
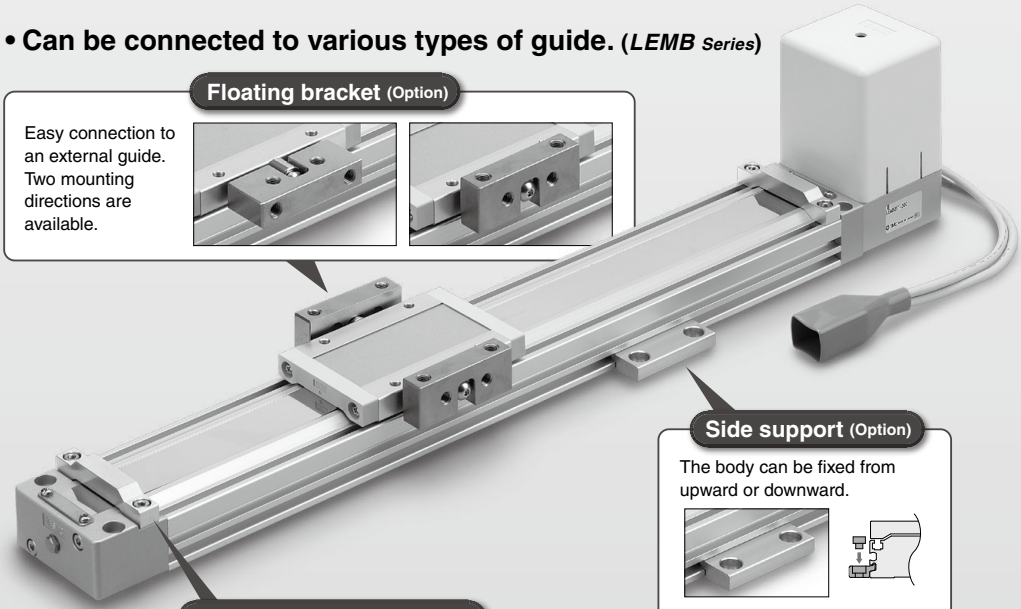
←

E-MY series	E-MY□16
	E-MY□25



Basic type/ LEMB | Cam follower guide type/ LEMC | Linear guide single axis type/ LEMH | Linear guide double axis type/ LEMHT

• Can be connected to various types of guide. (*LEMB Series*)

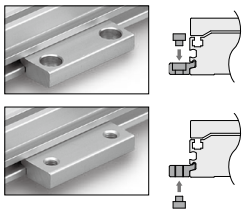


Floating bracket (Option)

Easy connection to an external guide. Two mounting directions are available.

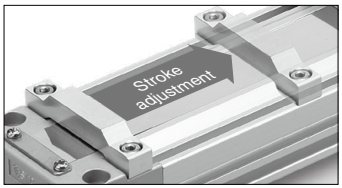
Side support (Option)

The body can be fixed from upward or downward.



Stroke adjustment unit (Option)

To adjust the stroke end like an air cylinder, use the LECP2 controller and the stroke adjustment unit.

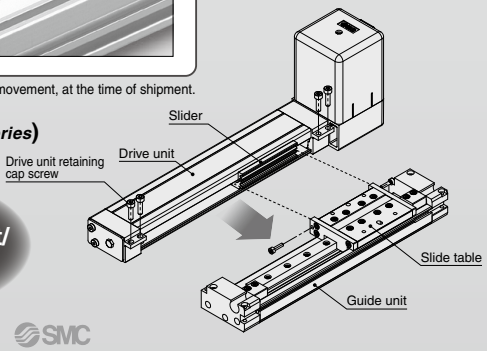


∗ The movable length of the LEM is the stroke + 6 mm of table movement, at the time of shipment.

• Easy maintenance (*LEMC/H/HT Series*)

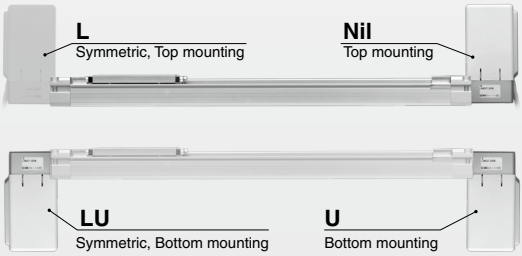
The drive unit and the guide unit are separable.

Easy attachment/ detachment



SMC
Courtesy of Steven Engineering, Inc - (800) 258-9200 - sales@steveneng.com - www.stevenengineering.com

- **Motor placement: Mounting position of the motor is user selectable and can either be on the top, bottom, left, or right of the actuator.**

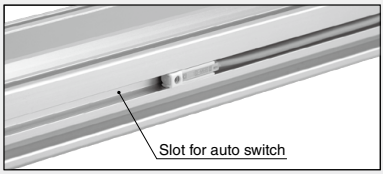


Motor mounting position

Nil	Top mounting
U	Bottom mounting
L*	Symmetric, Top mounting
LU*	Symmetric, Bottom mounting

* Can be selected only for the LEMC, LEMH, LEMHT.

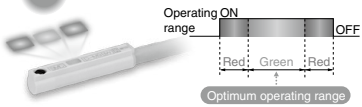
- **Solid state auto switch can be mounted for checking the limit and intermediate signal.**



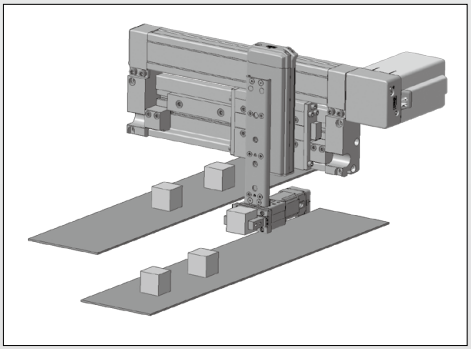
2-color indicator solid state auto switch

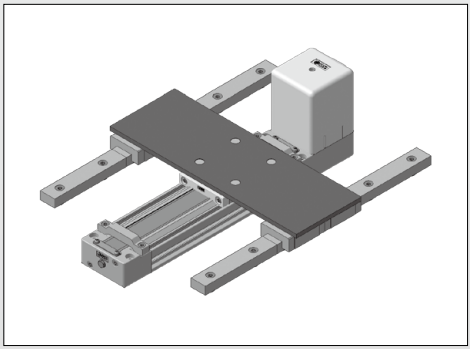
Appropriate setting of the mounting position can be performed without mistakes.

A green light lights up at the optimum operating range.



Application Examples





Variations

Belt Drive

Note) Cannot be used for vertical transfer.

Model Selection

LEMB Series ▶ Pages 178, 179-1 LEMC Series ▶ Pages 186, 187-1 LEMH/HT Series ▶ Pages 196, 197-1

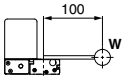
Selection Procedure

Step 1 Tentative Selection of Guide Mechanism. Check the speed–work load, work load–acceleration/deceleration. → **Step 2** Check the dynamic allowable moment. → **Step 3** Check the cycle time.

Selection Example

Operating conditions

- Work load: 10 [kg]
- Speed: 1000 [mm/s]
- Acceleration/Deceleration: 2500 [mm/s^2]
- Stroke: 600 [mm]
- Mounting orientation: Horizontal upward
- Workpiece mounting condition



Step 1 Tentative Selection of Guide Mechanism

Series	Type	Guideline for tentative model selection							Note
		Use of external guide	Direct loaded (Horizontal)	Table accuracy Note)	Direct mount (Wall mounting)	Moment resistance	Max. stroke [mm]	Max. speed [mm/s]	
LEMB	Basic type	◎	○	△	△	△	2000	1000	● Light load transfer ● Combining with external guide ● Long stroke
LEMC	Cam follower guide type	×	◎	◎	○	○	2000	1000	● Workpiece direct mounting ● Long stroke
LEMH	Linear guide single axis type	×	◎	◎	◎	◎	Size 25: 1000 Size 32: 1500	2000	● Workpiece direct mounting ● Provides more moment resistance than the cam follower guide type. ● High speed transfer
LEMHT	Linear guide double axis type	×	◎	◎	◎	◎	Size 25: 1000 Size 32: 1500	2000	● Workpiece direct mounting ● Provides more moment resistance than the linear guide single axis type. ● High speed transfer

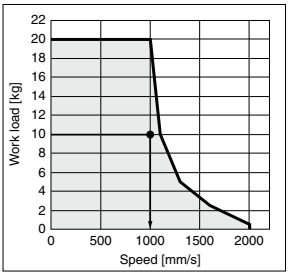
◎: Most suitable ○: Suitable △: Usable ×: Not recommended
Note) The table accuracy means the amount of table deflection when a moment is applied.

In conditions where a moment is generated, tentatively select the LEMH series.

<Speed–Work Load Graph>

Select the target model based on the workpiece mass and speed with reference to the <Speed–Work Load Graph>.

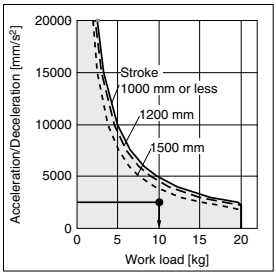
LEMH32



<Work Load–Acceleration/Deceleration Graph>

Check that the set acceleration/deceleration of the work load is within the allowable range, with reference to the <Work Load–Acceleration/Deceleration Graph>.

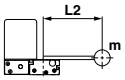
LEMH32

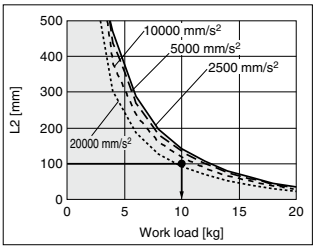


SMC
Courtesy of Steven Engineering, Inc - (800) 258-9200 - sales@steveneng.com - www.stevenengineering.com

Selection Procedure

Step 2 **Check the dynamic allowable moment.**





Based on the above calculation result, the LEMH32T-500 is selected.

Step 3 **Check the cycle time.**

Refer to method 1 for a rough estimate, and method 2 for a more precise value.
Method 1: Check the cycle time graph. (Page 172)
Method 2: Calculation

Calculate the **cycle time** using the following calculation method.

Cycle time:
T can be found from the following equation.

$$T = T1 + T2 + T3 + T4 \text{ [s]}$$

- T1: Acceleration time and T3: Deceleration time can be obtained by the following equation.

$$T1 = V/a1 \text{ [s]} \qquad T3 = V/a2 \text{ [s]}$$

- T2: Constant speed time can be found from the following equation.

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} \text{ [s]}$$

- T4: Settling time varies depending on the conditions such as motor types, load and in position of the step data. Therefore, calculate the settling time with reference to the following value.

$$T4 = 0.3 \text{ [s]}$$

Calculation example)
T1 to T4 can be calculated as follows.

$$T1 = V/a1 = 1000/2500 = 0.4 \text{ [s]},$$

$$T3 = V/a2 = 1000/2500 = 0.4 \text{ [s]}$$

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V}$$

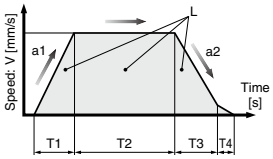
$$= \frac{600 - 0.5 \cdot 1000 \cdot (0.4 + 0.4)}{1000}$$

$$= 0.2 \text{ [s]}$$

$$T4 = 0.3 \text{ [s]}$$

Therefore, the **cycle time** can be obtained as follows.

$$T = T1 + T2 + T3 + T4$$
$$= 0.4 + 0.2 + 0.4 + 0.3$$
$$\mathbf{= 1.3 \text{ [s]}}$$



L: Stroke [mm]···(Operating condition)
V: Speed [mm/s]···(Operating condition)
a1: Acceleration [mm/s²]···(Operating condition)
a2: Deceleration [mm/s²]···(Operating condition)

T1: Acceleration time [s]
Time until reaching the set speed
T2: Constant speed time [s]
Time while the actuator is operating at a constant speed
T3: Deceleration time [s]
Time from the beginning of the constant speed operation to stop
T4: Settling time [s]
Time until positioning is completed

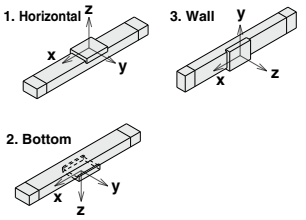
Calculation of Guide Load Factor

1. Decide operating conditions.
   Model: LEM
   Size: 25/32
   Mounting orientation: Horizontal/Bottom/Wall
   Acceleration [mm/s²]: **a**
   Work load [kg]: **m**
   Work load center position [mm]: **Xc/Yc/Zc**
2. Select the target graph with reference to the model, size and mounting orientation.
3. Based on the acceleration and work load, obtain the overhang [mm]: **Lx/Ly/Lz** from the graph.
4. Calculate the load factor for each direction.
   α**x = Xc/Lx**, α**y = Yc/Ly**, α**z = Zc/Lz**
5. Confirm the total of α**x**, α**y** and α**z** is 1 or less.
   α**x + αy + αz ≤ 1**
   When 1 is exceeded, please consider a reduction of acceleration and work load, or a change of the work load center position and series.

Mounting orientation



Example

1. Operating conditions
   Model: LEMH
   Size: 32
   Mounting orientation: Horizontal
   Acceleration [mm/s²]: 5000
   Work load [kg]: 5
   Work load center position [mm]: **Xc = 50**, **Yc = 100**, **Zc = 200**
2. Select three graphs from the top of the right side first row on page 175.
3. **Lx = 420 mm**, **Ly = 300 mm**, **Lz = 1000 mm**
4. The load factor for each direction can be obtained as follows.
   α**x = 50/420 = 0.12**
   α**y = 100/300 = 0.34**
   α**z = 200/1000 = 0.2**
5. α**x + αy + αz = 0.66 ≤ 1**

∗ Please consult with SMC as all non-standard and non-made-to-order strokes are produced as special orders.

⚠Caution

[CE-compliant products]

① EMC compliance was tested by combining the electric actuator LEM series and the controller LEC series.
The EMC depends on the configuration of the customer's control panel and the relationship with other electrical equipment and wiring. Therefore, conformity to the EMC directive cannot be certified for SMC components incorporated into the customer's equipment under actual operating conditions. As a result, it is necessary for the customer to verify conformity to the EMC directive for the machinery and equipment as a whole.

② CC-Link direct input type (LECPMJ) is not CE-compliant.

[UL-compliant products]

When conformity to UL is required, the electric actuator and controller should be used with a UL1310 Class 2 power supply.

Refer to pages 210 to 212 for auto switches.

The actuator and controller are sold as a package.
(They can be ordered separately.)

Confirm that the combination of the controller and the actuator is correct.

<Check the following before use.>

① Check the actuator label for model number. This matches the controller.

② Check Parallel I/O configuration matches (NPN or PNP).

∗ Please consult with SMC as all non-standard and non-made-to-order strokes are produced as special orders.

⚠Caution
[CE-compliant products]
EMC compliance was tested by combining the electric actuator LE series and the JXCE1/91/P1/D1/L1 series.
The EMC depends on the configuration of the customer's control panel and the relationship with other electrical equipment and wiring. Therefore, conformity to the EMC directive cannot be certified for SMC components incorporated into the customer's equipment under actual operating conditions. As a result, it is necessary for the customer to verify conformity to the EMC directive for the machinery and equipment as a whole.

Refer to pages 210 to 212 for auto switches.

	Lost motion [mm] Note 10)		0.1 or less	
	Lead [mm]		48	
	Actuation type		Belt	
	Guide type		Sliding bearing	
	Operating temperature range [°C]		5 to 40	
	Operating humidity range [%RH]		90 or less (No condensation)	
	Allowable external force [N] Note 8)		10	20
Electric specifications	Motor size		□56.4	
	Motor type		Step motor (Servo/24 VDC)	
	Encoder		Incremental A/B phase (800 pulse/rotation)	
	Rated voltage [V]		24 VDC±10%	
	Power consumption [W] Note 3)		50	52
	Standby power consumption when operating [W] Note 4)		44	44
	Max. instantaneous power consumption [W] Note 5)		123	127
Lock unit specifications	Type Note 6)		Non-magnetizing lock	
	Holding force [N]		36	
	Power consumption [W] Note 7)		5	
	Rated voltage [V]		24 VDC±10%	

Note 1) Please consult with SMC as all non-standard and non-made-to-order strokes are produced as special orders.
Note 2) Speed changes according to the work load.
Check "Speed–Work Load Graph (Guide)" on page 172. The work load changes according to the work load mounting condition. Check "Dynamic Allowable Moment" on page 174.
Furthermore, if the cable length exceeds 5 m, then it will decrease by up to 10% for each 5 m.
( ): When combined with external guide and the friction coefficient is 0.1 or less.
Note 3) The power consumption (including the controller) is for when the actuator is operating.
Note 4) The standby power consumption when operating (including the controller) is for when the actuator is stopped in the set position during operation.
Note 5) The maximum instantaneous power consumption (including the controller) is for when the actuator is operating. This value can be used for the selection of the power supply.
Note 6) With lock only
Note 7) For an actuator with lock, add the power consumption for the lock.
Note 8) The resistance value of the attached equipment should be within the allowable external resistance value.
Note 9) Maximum acceleration and deceleration are limited by the work load and stroke.
Refer to "Work Load–Acceleration/Deceleration Graph (Guide)" on page 173.
Note 10) A reference value for correcting an error in reciprocal operation.

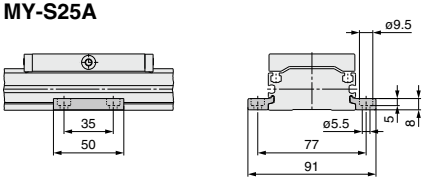
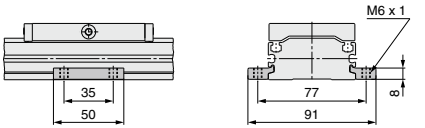
Side Support

Side support A
MY-S25A



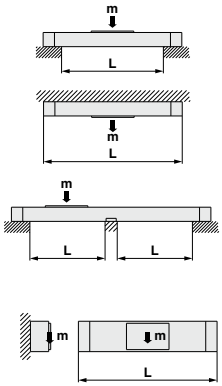
Side support B
MY-S25B

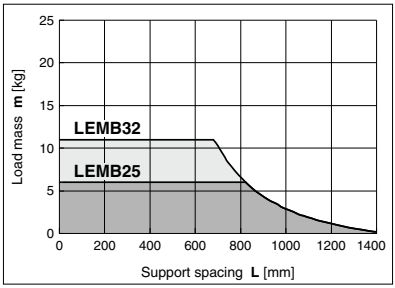


∗ A set of side supports consists of a left support and a right support.

Guide for Side Support Application

When using actuator with longer stroke, implement intermediate support to prevent frame deflection or deflection caused by vibration or external impacts. The spacing (**L**) of the intermediate supports must be no more than the values shown in the following graph.





⚠ Caution

1. If the actuator mounting surfaces are not measured accurately, using the intermediate support may cause poor operation. Make sure to level the mounting surface when mounting the actuator. For long stroke operation involving overhang of workpiece, implement intermediate support as recommended even if the support spacing is within the allowable limits shown in the graph. For the intermediate support, order a side support separately.
2. Support brackets are not for mounting. Use them solely for providing support.

⚠Caution

[CE-compliant products]

① EMC compliance was tested by combining the electric actuator LEM series and the controller LEC series.
The EMC depends on the configuration of the customer's control panel and the relationship with other electrical equipment and wiring. Therefore, conformity to the EMC directive cannot be certified for SMC components incorporated into the customer's equipment under actual operating conditions. As a result, it is necessary for the customer to verify conformity to the EMC directive for the machinery and equipment as a whole.

② CC-Link direct input type (LECPMJ) is not CE-compliant.

[UL-compliant products]

When conformity to UL is required, the electric actuator and controller should be used with a UL1310 Class 2 power supply.

Refer to pages 210 to 212 for auto switches.

The actuator and controller are sold as a package.
(They can be ordered separately.)

Confirm that the combination of the controller and the actuator is correct.

<Check the following before use.>

① Check the actuator label for model number. This matches the controller.

② Check Parallel I/O configuration matches (NPN or PNP).

	Standby power consumption when operating [W] Note 4)		44	44
	Max. instantaneous power consumption [W] Note 5)		123	127
Lock unit specifications	**Type** Note 6)		Non-magnetizing lock	
	Holding force [N]		36	
	Power consumption [W] Note 7)		5	
	Rated voltage [V]		24 VDC±10%	

Note 1) Please consult with SMC as all non-standard and non-made-to-order strokes are produced as special orders.
Note 2) Speed changes according to the work load.
Check "Speed–Work Load Graph (Guide)" on page 172.
The work load changes according to the work load mounting condition.
Check "Dynamic Allowable Moment" on page 175.
Furthermore, if the cable length exceeds 5 m, then it will decrease by up to 10% for each 5 m.
Note 3) The power consumption (including the controller) is for when the actuator is operating.
Note 4) The standby power consumption when operating (including the controller) is for when the actuator is stopped in the set position during operation.
Note 5) The maximum instantaneous power consumption (including the controller) is for when the actuator is operating. This value can be used for the selection of the power supply.
Note 6) With lock only
Note 7) For an actuator with lock, add the power consumption for the lock.
Note 8) The resistance value of the attached equipment should be within the allowable external resistance value.
Note 9) Maximum acceleration and deceleration are limited by the work load and stroke.
Refer to "Work Load–Acceleration/Deceleration Graph (Guide)" on page 173.
Note 10) A reference value for correcting an error in reciprocal operation.

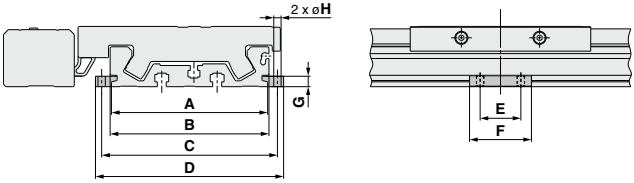
Side Support

Side support
MYC-S□A

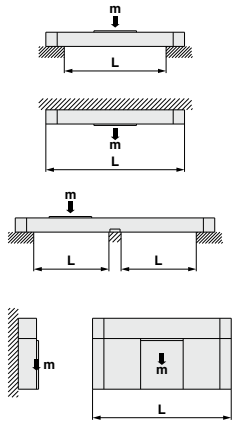


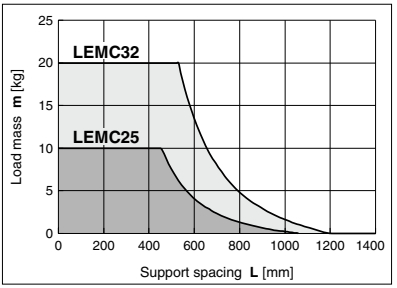
Model	Applicable actuator	A	B	C	D	E	F	G	øH
MYC-S16A	**LEMC25**	60.6	64.6	70.6	77.2	15	26	4.9	3.4
MYC-S25A	**LEMC32**	95.9	97.5	107.9	115.5	25	38	6.4	4.5

∗ A set of side supports consists of a left support and a right support.

Guide for Side Support Application

When using actuator with longer stroke, implement intermediate support to prevent frame deflection or deflection caused by vibration or external impacts. The spacing (**L**) of the intermediate supports must be no more than the values shown in the following graph.





⚠ Caution

1. If the actuator mounting surfaces are not measured accurately, using the intermediate support may cause poor operation. Make sure to level the mounting surface when mounting the actuator. For long stroke operation involving overhang of workpiece, implement intermediate support as recommended even if the support spacing is within the allowable limits shown in the graph. For the intermediate support, use the square nuts at the bottom of the body or order a side support separately.
2. Support brackets are not for mounting. Use them solely for providing support.

Square nuts on the bottom

∗ Please consult with SMC as all non-standard and non-made-to-order strokes are produced as special orders.

⚠Caution

[CE-compliant products]

① EMC compliance was tested by combining the electric actuator LEM series and the controller LEC series.
The EMC depends on the configuration of the customer's control panel and the relationship with other electrical equipment and wiring. Therefore, conformity to the EMC directive cannot be certified for SMC components incorporated into the customer's equipment under actual operating conditions. As a result, it is necessary for the customer to verify conformity to the EMC directive for the machinery and equipment as a whole.

② CC-Link direct input type (LECPMJ) is not CE-compliant.

[UL-compliant products]

When conformity to UL is required, the electric actuator and controller should be used with a UL1310 Class 2 power supply.

Refer to pages 210 to 212 for auto switches.

The actuator and controller are sold as a package.
(They can be ordered separately.)

Confirm that the combination of the controller and the actuator is correct.

<Check the following before use.>

① Check the actuator label for model number. This matches the controller.

② Check Parallel I/O configuration matches (NPN or PNP).

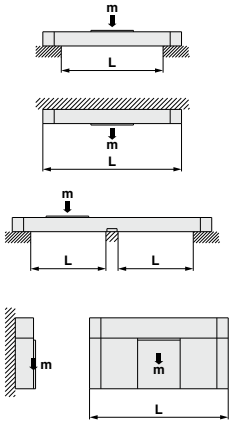
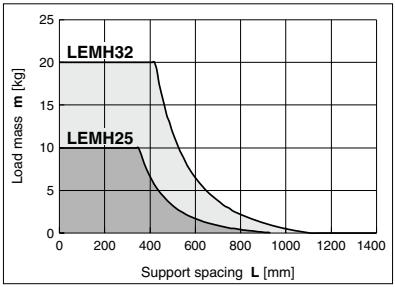
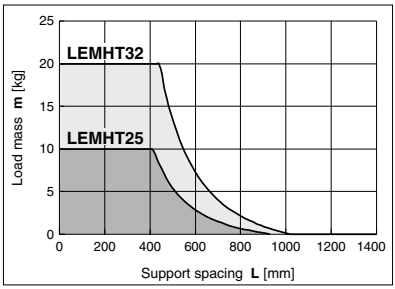
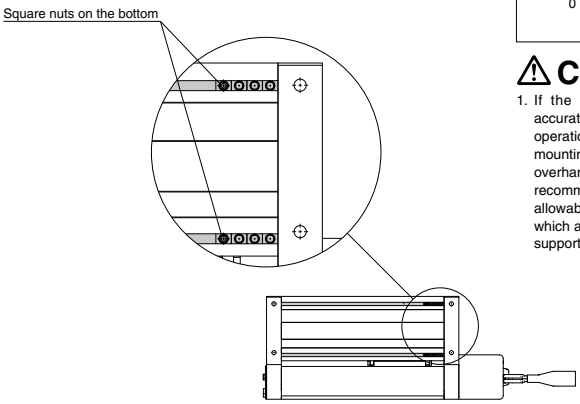
Guide for Intermediate Support

When using actuator with longer stroke, implement intermediate support to prevent frame deflection or deflection caused by vibration or external impacts. The spacing (**L**) of the intermediate supports must be no more than the values shown in the following graph.









⚠ Caution

1. If the actuator mounting surfaces are not measured accurately, using the intermediate support may cause poor operation. Make sure to level the mounting surface when mounting the actuator. For long stroke operation involving overhang of workpiece, implement intermediate support as recommended even if the support spacing is within the allowable limits shown in the graph. Use the square nuts which are on the bottom of the actuator for the intermediate support.

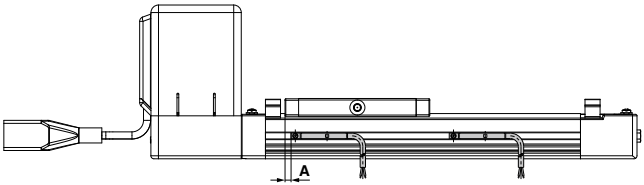
LEM Series
Auto Switch Mounting

Auto Switch Proper Mounting Position at Stroke End Detection

For LEMB



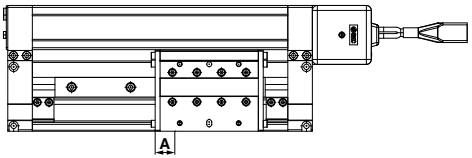
D-M9, D-M9□V
D-M9□W, D-M9□WV [mm]

Model	Nominal size	A	Operating range
LEMB	**25**	40	5.5
LEMC		8	3.5
LEMH		10	6
LEMHT		34	7
LEMB	**32**	40	5.5
LEMC		8.4	4
LEMH			5.5
LEMHT			5.5

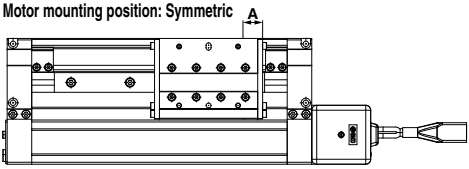
Note) The operating range is a guideline including hysteresis, not meant to be guaranteed. There may be large variations (as much as ±30%) depending on the ambient environment.

For LEMC/H/HT The proper mounting position at stroke end detection (A dimension) changes depending on the motor mounting position (standard or symmetric).

Motor mounting position: Standard



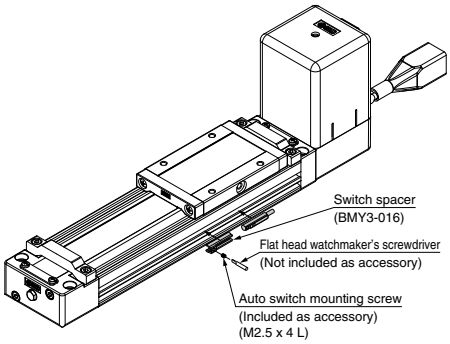
Motor mounting position: Symmetric



Auto Switch Mounting

LEMB Series

When mounting an auto switch, first hold the switch spacer with your fingers and push it into the slot. Confirm that it is aligned evenly within the slot and adjust the position if necessary. Then, insert the auto switch into the slot and slide it into the spacer.
After establishing the mounting position, use a flat head watchmaker's screwdriver to tighten the included auto switch mounting screw.



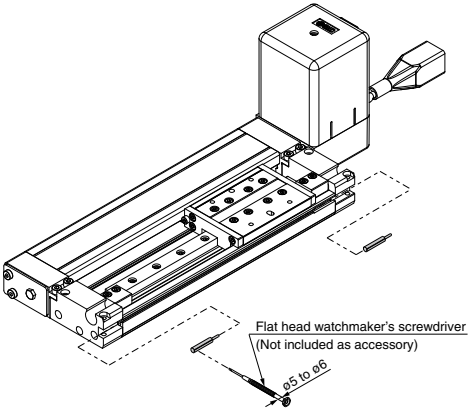
Note) When tightening the auto switch mounting screw, use a watchmaker's screwdriver with a handle of approximately 5 to 6 mm in diameter. Also, tighten with a torque of about 0.05 to 0.1 N·m. As a guide, turn about 90° past the point at which tightening can first be felt.

Switch Spacer Part No.

Applicable bore size [mm]	25	32
Switch spacer part no.	BMY3-016	

LEMC/H/HT Series

When mounting an auto switch, insert the auto switch into the actuator's auto switch mounting slot as shown below. Once in the mounting position, use a flat head watchmaker's screwdriver to tighten the included auto switch mounting screw.



Note) When tightening the auto switch mounting screw (included with auto switch), use a watchmaker's screwdriver with a handle of approximately 5 to 6 mm in diameter.

Tightening Torque for Auto Switch Mounting Screw [N·m]

Auto switch model	Tightening torque
D-M9□(V) **D-M9□W(V)**	0.10 to 0.15

SMC

Solid State Auto Switch
Direct Mounting Type
D-M9N(V)/D-M9P(V)/D-M9B(V)

RoHS

Refer to SMC website for the details of the products conforming to the international standards.

Grommet

- **2-wire load current is reduced (2.5 to 40 mA).**
- **Using flexible cable as standard spec.**

⚠Caution

Precautions

Fix the auto switch with the existing screw installed on the auto switch body. The auto switch may be damaged if a screw other than the one supplied is used.

Auto Switch Specifications

LEM Series
Electric Actuator
Specific Product Precautions 1

Be sure to read this before handling the products. Refer to back page 50 for Safety Instructions and pages 3 to 8 for Electric Actuator Precautions.

Design

⚠Caution

1. Do not apply a load in excess of the specification limits.
Select a suitable actuator by work load and allowable moment. If the product is used outside of the specification limits, the eccentric load applied to the guide will be excessive and have adverse effects such as creating play on the guide, degrading accuracy and shortening the life of the product.

2. Do not increase the speed in excess of the specification limits.
Select a suitable actuator by the relationship between the "speed–work load", and the "work load–acceleration/deceleration". If the product is used outside of the specification limits, it will have adverse effects such as creating noise, degrading accuracy and shortening the life of the product.

3. Do not use the product in applications where excessive external force or impact force is applied to it.
This can cause a failure.

4. When external force is applied to the table, it is necessary to add external force to the work load as the total carried load for the sizing.
When a cable duct or flexible moving tube is attached in parallel to the actuator, it is necessary to add the friction to the work load as the total carried load for the sizing, too.

5. The resistance value of the attached equipment should be within the allowable external resistance value.

6. When the product repeatedly cycles with partial strokes (see the table below), operate it at a full stroke at least once every 10 dozens of cycles.
Otherwise, lubrication can run out.

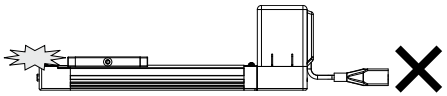
Model	Partial stroke
LEMB25	45 mm or less
LEMB32	45 mm or less
LEMC25	30 mm or less
LEMC32	40 mm or less
LEMH25	20 mm or less
LEMH32	25 mm or less
LEMHT25	20 mm or less
LEMHT32	25 mm or less

Handling

⚠Caution

1. INP output signal (LECP6)
1) Positioning operation
When the product comes within the set range by step data [In positon], the INP output signal will turn on.
Initial value: Set to [1] or higher.

2. Never hit at the stroke end except during return to origin. (Except when the LECP2 controller is used.)
Internal stopper can be broken.



3. The moving force should be the initial value.
If the moving force is set below the initial value, it may cause an alarm.

4. The actual speed of this actuator is affected by the work load.
Check the model selection section of the catalog.

5. Do not apply a load, impact or resistance in addition to the transferred load during return to origin.
Additional force will cause the displacement of the origin position since it is based on detected motor torque.

Handling

⚠Caution

6. Do not dent, scratch or cause other damage to the body and table mounting surfaces.
This may cause unevenness in the mounting surface, play in the guide or an increase in the sliding resistance.

7. Do not apply strong impact or an excessive moment while mounting a workpiece.
If an external force over the allowable moment is applied, it may cause play in the guide or an increase in the sliding resistance.

8. Provide a flat surface for installing the actuator. The degree of surface flatness should be determined by the machine precision requirement, or its corresponding precision.
The degree of surface flatness for installing the actuator should be within 0.05 mm/200 mm. The degree of surface flatness for mounting a workpiece should be within 0.05 mm (LEMB), 0.02 mm (LEMC/H/HT).

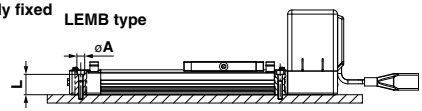
9. When mounting the actuator, keep a 40 mm or longer diameter for bends in the cable.

10. Do not hit the table with the workpiece in the positioning operation and positioning range.

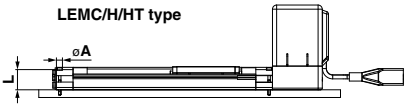
11. When mounting the product, use screws with adequate length and tighten them with adequate torque.
Tightening the screws with a higher torque than the maximum may cause a malfunction, whilst the tightening with a lower torque can cause the displacement of the mounting position or in extreme conditions the actuator could become detached from its mounting position.

Body fixed

LEMB type



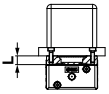
LEMC/H/HT type



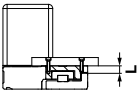
Model	Screw size	Maximum tightening torque [N·m]	ø**A** [mm]	**L** [mm]
LEMB□	M5	3	5.5	24.5
LEMC25 **LEMH25**	M3	0.6	3.4	23.7
LEMC32 **LEMH32**	M5	3	5.5	30.1
LEMHT25	M5	3	5.5	21.6
LEMHT32	M8	12.5	9	26.9

Workpiece fixed

LEMB type



LEMC/H/HT type



Model	Screw size	Maximum tightening torque [N·m]	**L** (Maximum screw-in depth) [mm]
LEMB□	M5 x 0.8	3	8
LEMC25 **LEMH25**	M4 x 0.5	1.5	7
LEMC32 **LEMH32**	M5 x 0.8	3	9
LEMHT25	M5 x 0.8	3	9
LEMHT32	M8 x 1.25	12.5	12

To prevent the workpiece retaining screws from touching the body, use screws that are 0.5 mm or shorter than the maximum screw-in depth. If long screws are used, they can touch the body and cause a malfunction.

Courtesy of Steven Engineering, Inc - (800) 258-9200 - sales@steveneng.com - www.stevenengineering.com

LEM Series
Electric Actuator
Specific Product Precautions 2

Be sure to read this before handling the products. Refer to back page 50 for Safety Instructions and pages 3 to 8 for Electric Actuator Precautions.

Handling

⚠Caution

12. Do not operate by fixing the table and moving the actuator body.

13. The belt drive actuator cannot be used vertically for applications.

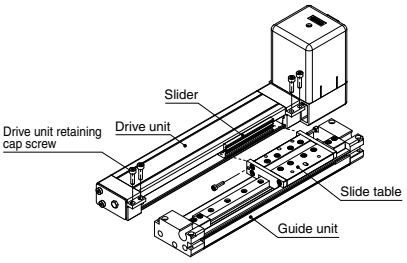
14. Check the specifications for the minimum speed of each actuator.
Otherwise, unexpected malfunctions, such as knocking, may occur.

15. In the case of the belt drive actuator, vibration may occur during operation at speeds within the actuator specifications, this could be caused by the operating conditions. Change the speed setting to a speed that does not cause vibration.

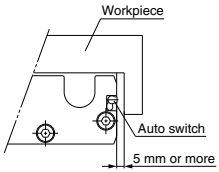
16. High frequency noise will be generated during deceleration depending on the operating conditions. This is a noise generated during processing the regenerative power. It is not a failure.

17. When using actuator with longer stroke, implement an intermediate support.
When using actuator with longer stroke, implement intermediate support to prevent frame deflection or deflection caused by vibration or external impacts.

18. Attaching and detaching the drive unit
To remove the drive unit, remove the 6 drive unit retaining cap screws and remove the slider from the guide unit. To install the drive unit, insert its slider into the slide table on the guide unit and tighten 2 screws of connection part, and then equally tighten the 4 retaining cap screws. Tighten the retaining cap screws securely because if they become loose, problems may occur such as damage, malfunction.



19. Workpiece mounting
When mounting a magnetic workpiece, keep a clearance of 5 mm or greater between the auto switch and the workpiece. Otherwise, the magnetic force within the actuator may be lost, resulting in malfunction of the auto switch.



Handling

⚠Caution

20. Grease is applied to the dust seal band for sliding. When wiping off the grease to remove foreign matter etc., be sure to apply it again.

21. Do not apply external force to the dust seal band.
Particularly during the transportation

Maintenance

⚠Warning

Maintenance frequency
Perform maintenance according to the table below.

Frequency	Appearance check	Internal check	Belt check
Inspection before daily operation	○	—	—
Inspection every 6 months/1000 km/ 5 million cycles *	○	○	○

* Select whichever comes first.

- **Items for visual appearance check**
  1. Loose set screws, Abnormal dirt
  2. Check of flaw and cable joint
  3. Vibration, Noise

- **Items for internal check**
  1. Lubricant condition on moving parts.
  2. Loose or mechanical play in fixed parts or fixing screws.

- **Items for belt check**
  Stop operation immediately and replace the belt when belt appear to be below. Further, ensure your operating environment and conditions satisfy the requirements specified for the product.

  a. Tooth shape canvas is worn out.
  Canvas fiber becomes fuzzy. Rubber is removed and the fiber becomes whitish. Lines of fibers become unclear.

  b. Peeling off or wearing of the side of the belt
  Belt corner becomes round and frayed thread sticks out.

  c. Belt partially cut
  Belt is partially cut. Foreign matter caught in teeth other than cut part causes flaw.

  d. Vertical line of belt teeth
  Flaw which is made when the belt runs on the flange.

  e. Rubber back of the belt is softened and sticky.

  f. Crack on the back of the belt
