

CAT. N140

ISO Interface Solenoid Valve *VSR/S 8*

Size 1, 2 & 3

Complies with ISO Standard 5599/2
CSA approved
Lateral plug-in type manifold option
Low power Solenoids (1.8W)

ISO 5599/2 Plug-In P

ISO STANDARD VALVE INTERFACE - SIZES 1, 2 & 3

Higher range of flow rates within each valve size

Size	Model	Seal	Effective area mm ² (Cv) ^{Note 1)}	Response time m sec. ^{Note 2)}			Port size	Dimensions mm (in.) ^{Note 3)}	Weight g (lb) ^{Note 4)}
				Single	Double	3 position			
1	VSR8-6	Rubber	36 (2.0)	30	30	50	¼ ⅜ ½	62x111x188.5 (2.4x4.4x7.4)	552 (1.21)
2	VSR8-8	Rubber	72 (4.0)	50	50	70	⅜ ½ ¾	79x125.5x211 (3.1x4.9x8.3)	824 (1.81)
3	VSR8-10	Rubber	97 (5.4)	80	50	95	½ ¾ 1	96x137x246 (3.8x5.4x9.7)	1000 (2.21)
1	VSS8-6	Metal	32 (1.8)	25	20	45	¼ ⅜ ½	62x111x188.5 (2.4x4.4x7.4)	552 (1.21)
2	VSS8-8	Metal	65 (3.6)	40	20	55	⅜ ½ ¾	79x125.5x211 (3.1x4.9x8.3)	824 (1.81)
3	VSS8-10	Metal	90 (5.0)	50	25	60	½ ¾ 1	96x137x246 (3.8x5.4x9.7)	1000 (2.21)

Note 1) Value for valve mounted on an individual subplate. ½" ports for size 1, ¾" ports for size 2, and 1" ports for size 3.

Note 2) At 0.5MPa (71psi).

Note 3) Double solenoid type.

Note 4) Single solenoid type without base.

Choice of seals for maximum flexibility

Available in either high flow rubber seal (model VSR) or matched ground spool and sleeve (model VSS).

Low power consumption: 1.8w DC

Available in 2 or 3 position, single or double solenoid pilot configuration.

Long operating life

- Rubber Seal: 30 million cycles or more
- Metal Seal: 50 million cycles or more

* Subject to SMC's own test data using clean and dry air

Meet the following specifications:

SAE SPEC: SAE J2051

GM SPEC: CC-003

Popular SMC models have been certified by the Canadian Standards Association and bear the CSA trademark. This designation is a registered mark which signifies that the product has been certified to the applicable CSA and UL standard for use in Canada and the United States. NRTL, i.e. Nationally Recognized Testing Laboratory, is a designation granted by the U.S. Occupational Safety and Health Administration (OSHA) to laboratories which have been recognized to perform certification to U.S. Standards. Please consult the factory for specific details.

Product Features Valve

Easily increase or decrease a manifold station without rewiring the manifold.

A variety of manifold & wiring options

- Individual SUP spacer (For size 1 & 2)
- Individual EXH spacer (For size 1 & 2)
- Interface speed controls (For size 1 & 2)
- Interface regulator (For size 1, 2 & 3)
- Terminal box with conduit port
- Serial transmission unit (Device Net)
- Splash proof manifold conforms to IP65 and NEMA4.

Note 2) Subject to JISB8375-1981. At 0.5MPa (71psi)

Note 3) Single solenoid type without base

Specifications

		Rubber Seal	Metal Seal
Valve operation		Pilot operated, 5 port	
Fluid		Air, Inert gas	
Operating pressure range MPa (psi)		0.1~1.0 (14.5~145)	0.1~1.6 (14.5~230) ^{Note1)}
Proof pressure MPa (psi)		1.5 (217)	2.4 (348)
Ambient and fluid temperature C° (°F) ^{Note2)}		-5~50 (23~122)	-20~60 (-4~140)
Maximum operating ^{Note3)} frequency cycle/Sec.	2-position	8-6:5, 8-8:5, 8-10:5	8-6:20, 8-8:15, 8-10:10
	3-position	8-6:3, 8-8:3, 8-10:2	8-6:10, 8-8:10, 8-10:20
Lubrication		Not required	
Manual override		non-locking push type	
Protection structure		NEMA 4/IP65	
Coil rated voltage		24VDC, 12VDC	
Allowable voltage range %		-15~10% of rated voltage	
Coil insulation		Class B or equivalent	
Apparent power ^{VA Note3)} For 12 VDC	Inrush	50Hz	5.6
		60Hz	5.0
	Holding	50Hz	3.4
		60Hz	2.3
Apparent power ^{VA Note3)} For 24 VDC	Inrush	N/A	
	Holding	.075 AMPS	
Power consumption W		1.8	
Surge voltage suppressor and indicator light		Available as option	

Note 1) Pilot pressure range should be 0.1~1.0MPa (14.5~145psi).

Note 2) Use dry air to prevent dew condensation when operating at low temperature.

Note 3) Subject to JISB8375-1975.

Precautions

Quality of Fluid

1. A filter of about 5 μm is adequate.
2. Remove contaminants from the system because excess contaminants cause pneumatic product malfunctions as well as environmental pollution.
For added convenience, the use of an auto drain is recommended.
3. When there is a large amount of carbon powder from the compressor, it causes valve malfunction. Please change the compressor oil or install a mist separator.
4. The valve has been lubricated for life at manufacture, and does not require lubrication in service.
If a lubricant is used in the system, use turbine oil (ISO VG32).

Solenoid Precautions

1. Ensure that voltage leakage across the coil is as follows.
DC coil: No more than 3% of the rated voltage
AC coil: No more than 20% of the rated voltage
2. Continuous duty
When long term energizing is required, the continuous energizing time should not exceed 30 days.
3. Energization time
The double solenoid valve must be energized for at least 0.1 second to ensure proper operation.

Wiring & Light / Surge Voltage Suppressor

AC AND 100 VDC

24VDC OR LESS

Piping

1. Flushing: Thoroughly flush the piping on both inlet and outlet sides of the valve to remove dust.
2. Mounting position: Mount the double solenoid and 3-position type valves so that the spool valve will be horizontal.
3. Installation in places subject to vibration: Mount the valve so that spool valve will be at right angles to direction of vibration.
(Avoid use in places where vibration exceeds 5G.)
4. When 3-position closed center valve is mounted: Check the piping between the valve and cylinder as well as joints for leakage using soapy water. Even slight leakage should be avoided.
5. R(EXH) port piping: Take care that exhaust air is not throttled.
(Otherwise, delay in response or cylinder malfunction may result.)

Operation Conditions

Avoid the following locations or environments to prevent valve trouble. If it is unavoidable install a cover, etc. for protection.

1. Locations where the ambient temperature exceeds +5~50°C range. The metal seal type can be used down to -10°C, but take care that solidification of contaminants or water freezing does not take place.
2. Locations where valves will be exposed directly to water drops, cutting oil, etc.
3. Locations exposed to direct sunlight.
4. Environments causing dewing on valve body or condensation when there are drastic temperature changes.
5. Locations exposed to corrosive gas, chemicals and their solution or vapor seawater, etc.

How to calculate Flow (At an air temperature 20°C)

Subsonic flow: $P_1 + 0.1013 < 1.89(P_2 + 0.1013)$

$$Q = 226S \sqrt{\Delta P(P_2 + 0.1013)}$$

Sonic flow: $P_1 + 0.1013 > 1.89(P_2 + 0.1013)$

$$Q = 113S(P_1 + 0.1013)$$

Q: Flow rate under standard conditions [l/min(ANR)]

S: Effective area (mm²)

ΔP : Pressure differential (P1-P2) (MPa)

P1: Upstream pressure (MPa)

P2: Downstream pressure (MPa)

* When the air temperatures is different, multiply the flow calculated with the above formula by the following factor.

Air Temperature (C°)	-20	-10	0	10	30	40	50	60
Factor	1.08	1.06	1.04	1.02	0.98	0.97	0.95	0.94

Features / Options

Expandable Manifold

Stacking type manifold can be expanded up to the recommended number of stations. (Max. of 10 stations)

Various porting combinations available to suit your application.

Every manifold block comes standard with side and bottom ports.

Wide variety of Interface Options

Individual supply/exhaust spacers, interface regulators and interface speed controls are available to customize your manifold

The manifold Series VV81 have a wide variety of functions and portings, compatible with virtually any application.

Standard Features

Common EXH Type

All the manifolded valves are supplied and exhausted by the same manifold ports. This is our most popular configuration.

Bottom Porting Type (A, B port)

When The application requires bottom porting, either a portion of, or the entire manifold can be piped with bottom porting.

Interface Options

Individual EXH Spacer

An individual EXH spacer (VV81-R-■) mounted on the manifold block allows each valve to exhaust individually.

Individual SUP Spacer

An individual SUP spacer (VV81-P-■) mounted on the manifold block allows each valve to exhaust individually.

Interface Regulator

The interface unit is designated to separately control the pressure of one valve and still maintain a common manifold pressure. This unit is available as either a P port regulator or as an A or B port regulator.

Interface Speed Controls

Cylinder speed can be controlled by throttling exhaust air.

Manifold Option

Terminal Box

- Terminals are provided in the box, permitting connection of conduit piping.
- Simplifies wiring requirements

SI Unit

With serial interface unit

- Solenoid valve wiring reduced considerably.
- Applicable to Dvice Net and Profi Bus.

Splash Proof

Splash proof manifold conforms to IP65 and NEMA4.

- Applicable to all sizes
