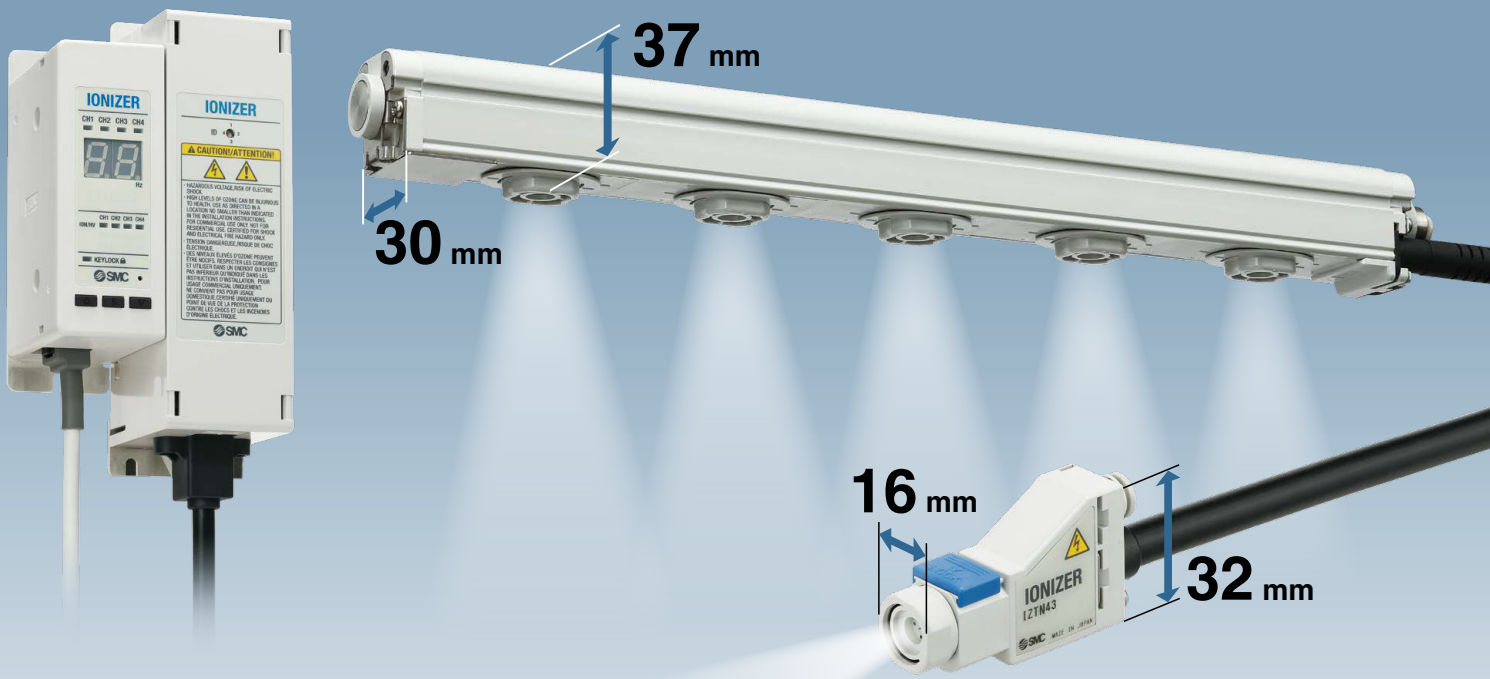
Separate Controller Ionizer
Bar Type / Nozzle Type

CE RoHS

Space Saving

Bar type
IZT40/41/42 Series
Height 37 mm x Width 30 mm

New Nozzle type
IZT43 Series
Height 32 mm x Width 16 mm



- **Potential amplitude: 25 V or less**[*1]
- **Rapid static neutralization: Fastest time 0.1 s**[*2]
- **Static neutralization is possible even when air is not being supplied.**

Type	Application	Bar	Nozzle
Dual AC	For reducing the potential amplitude	**IZT42**	—
AC	For maintaining a constant offset voltage	**IZT41**	**IZT43**
Standard	Simple operation by just turning the power on	**IZT40**	—

∗1 IZT42 installation height: 300 mm
∗2 IZT40, 41
Conditions: Discharge time from 1000 V to 100 V
Object to be neutralized: Charged plate (150 mm x 150 mm, Capacitance 20 pF)
Installation distance: 100 mm (High speed static neutralization cartridge, Tungsten electrode needle with air purge)
Bar length: 1120 mm

IZT40/41/42/43 Series

SMC

CAT.ES100-120C

Dual AC Type *IZT42 Series* (Potential amplitude reduction specification)

Bar

Potential amplitude: 25 V or less[*1]

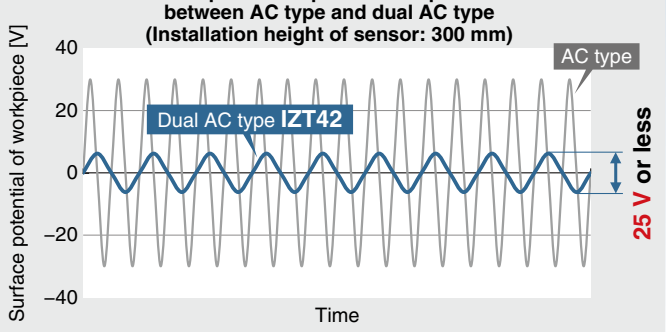
Rapid static neutralization: 0.1 s[*2]

*1 IZT42 installation height: 300 mm
*2 IZT40, 41
Conditions: Discharge time from 1000 V to 100 V
Object to be neutralized: Charged plate (150 mm x 150 mm, Capacitance 20 pF)
Installation distance: 100 mm (High speed static neutralization cartridge, Tungsten electrode needle with air purge)
Bar length: 1120 mm

The potential amplitude can be reduced with SMC's original dual AC type sensor.

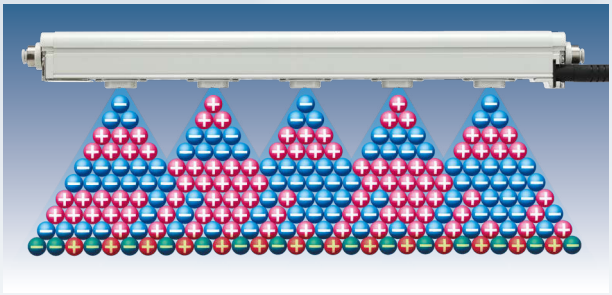
Static neutralization in consideration of damage to a device which is sensitive to electrostatic discharge (ESD) can be achieved. The potential amplitude applied to the applicable workpiece is reduced even if the workpiece is mounted within close proximity of the ionizer.

Comparison of potential amplitude between AC type and dual AC type (Installation height of sensor: 300 mm)



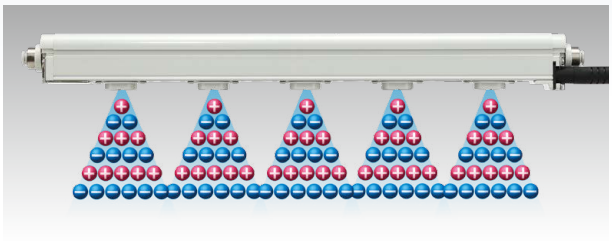
Dual AC type IZT42

+ ions and – ions are discharged at the same time to allow the + and – ions to reach the workpiece evenly, thereby reducing the potential amplitude.



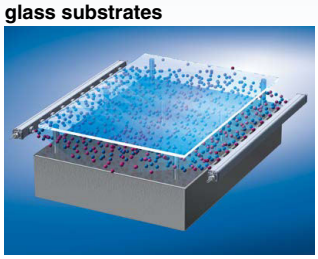
AC type IZT40, 41, 43

+ ion and – ion layers reach the workpiece alternately, which increases the potential amplitude.



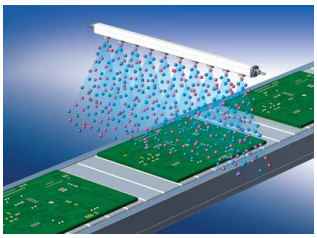
Application Examples

For the static neutralization of glass substrates



Prevents the breakage of glass substrates by the static electricity generated when the substrate is lifted from the surface plate

For the static neutralization of electric substrates



· Prevents element disruption due to discharge
· Prevents the adhesion of dust

AC Type *IZT41, 43 Series*

Bar Nozzle

• With auto balance function

IZT41 **IZT43**

* The controller can be used with either type.
Use a high voltage power supply module compatible with the selected type.

SMC

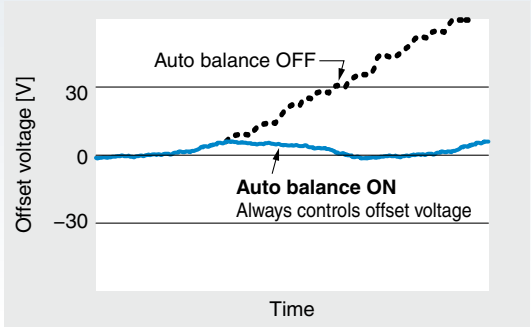
- **Emitter contamination detection continually displayed and output**
- **Individual ON/OFF command from an external input signal**

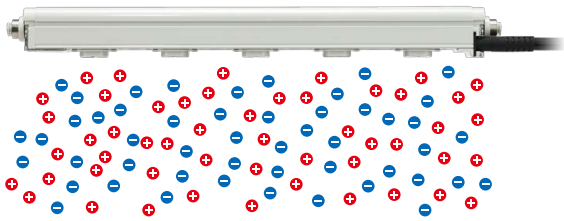
With auto balance function

The sensor is installed within the ionizer body and may be mounted anywhere.

The offset voltage (ion balance) in the static neutralization area is controlled so that the voltage is maintained at a constant value by monitoring the ions emitted from the ionizer using the ground line.

Effect of auto balance (Image)





Monitoring +/– return current

Standard Type *IZT40 Series* Bar

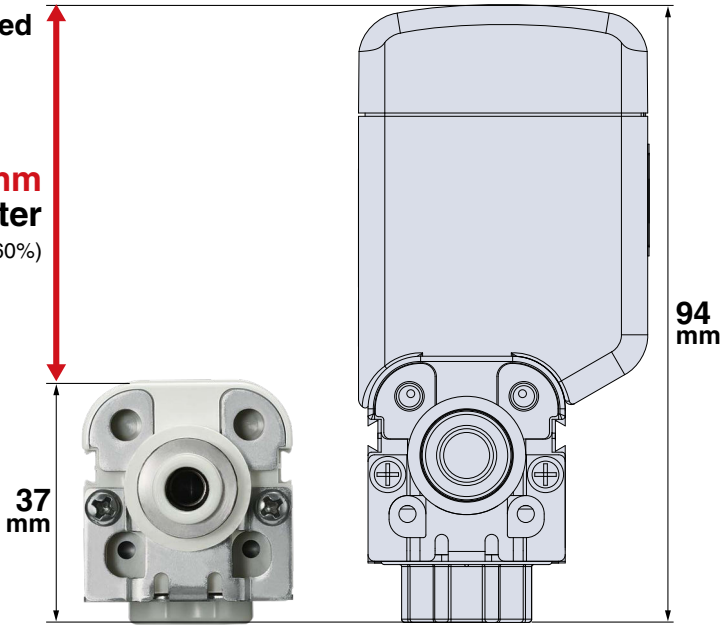
- **Simple operation: Can be controlled by powering the ionizer ON**

An AC adapter is available.
(The AC adapter can only be used for 1 ionizer.)

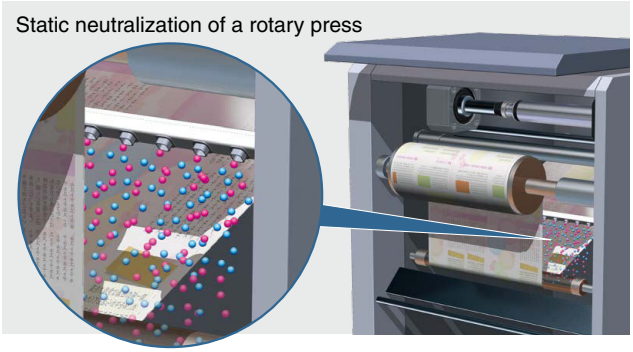
The compact body allows for space saving.

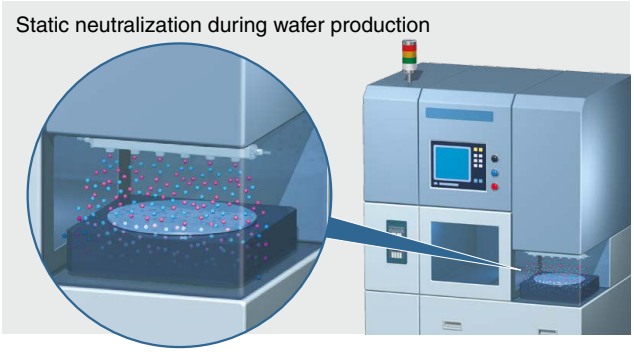
Bar

- **Reduced height**



- **Can be mounted in narrow spaces**





Space saving

Nozzle

Thickness 16 mm x Width 53 mm x Height 32 mm

- **For the removal of dust and static neutralization by air blow**

For the static neutralization of plastic bottles and particle elimination

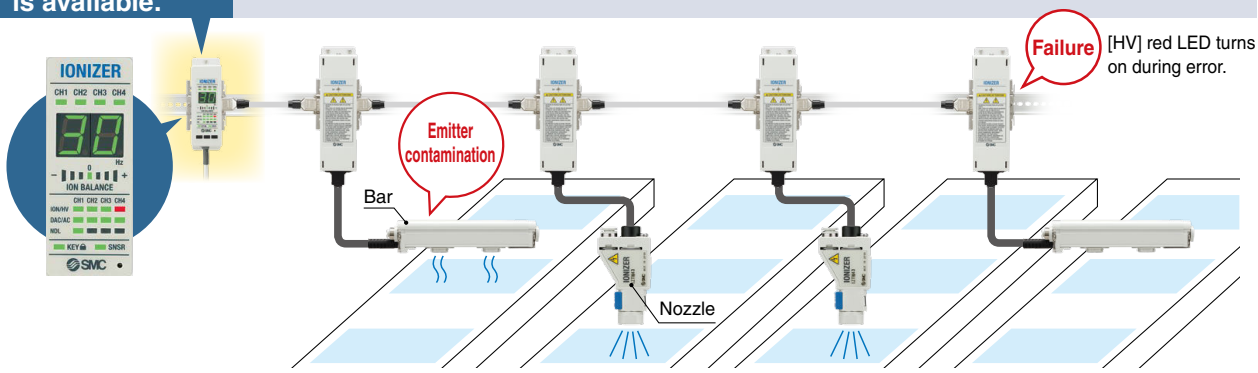
One controller can control a maximum of 4 ionizers.

Bar Nozzle

- Mixed bar and nozzle connection is possible.

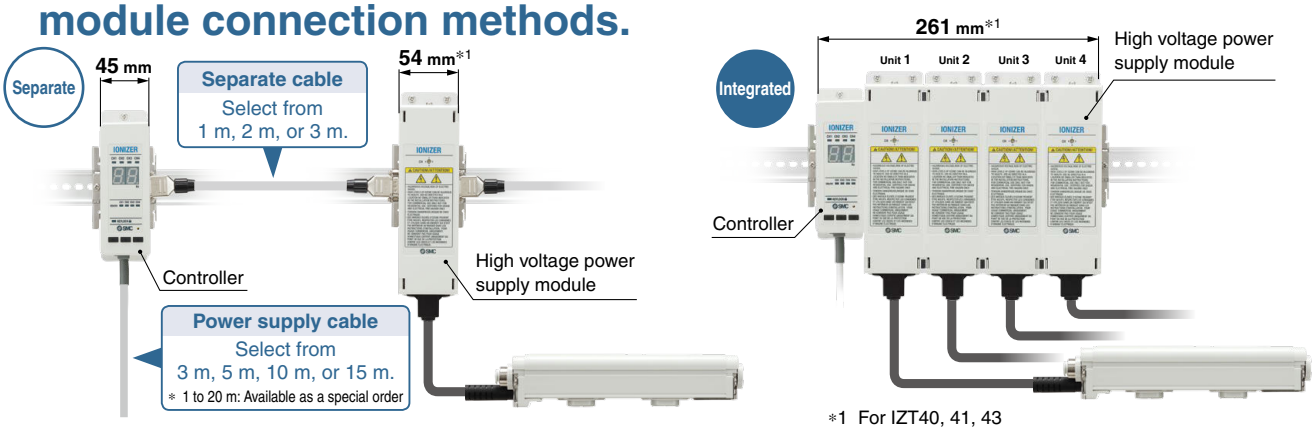
Concentrated control is available.

- Bar and nozzle errors can be detected.
- Contamination of the emitter can be monitored.



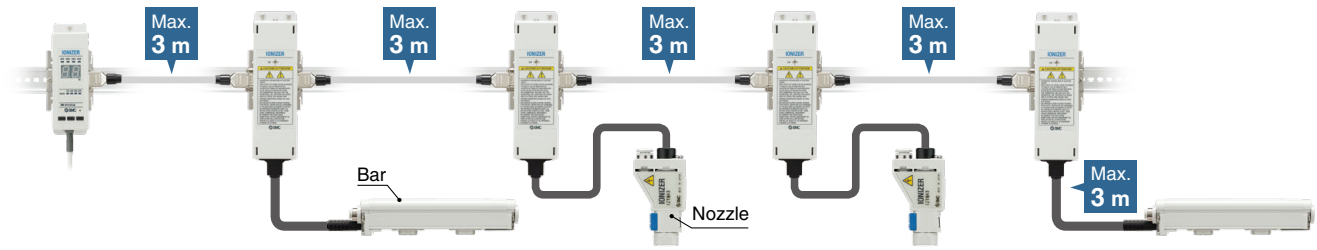
A flexible layout can be achieved due to the various module connection methods.

Bar Nozzle



*1 For IZT40, 41, 43

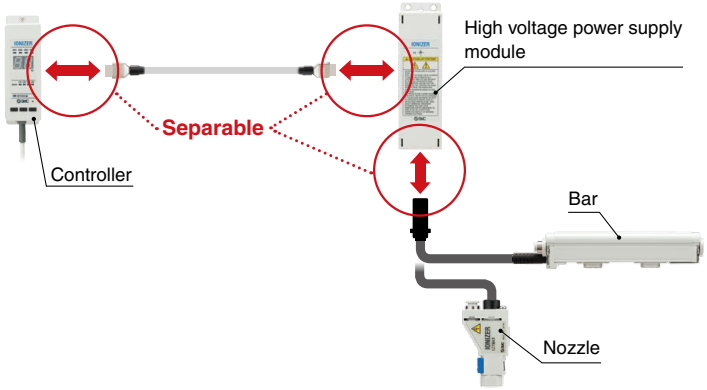
- Max. installation distance between controller and bar/nozzle: 15 m



The simple installation of each module is possible by connector connection.

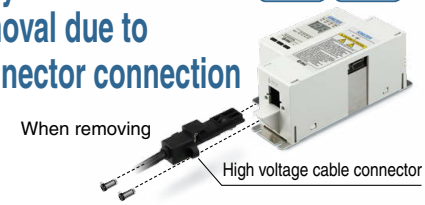
Bar Nozzle

- The connector connection of cables is possible for each module after installation.



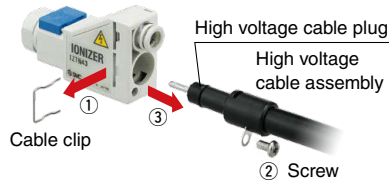
Easy insertion and removal due to connector connection

Bar Nozzle



For the insertion and removal of high voltage cables

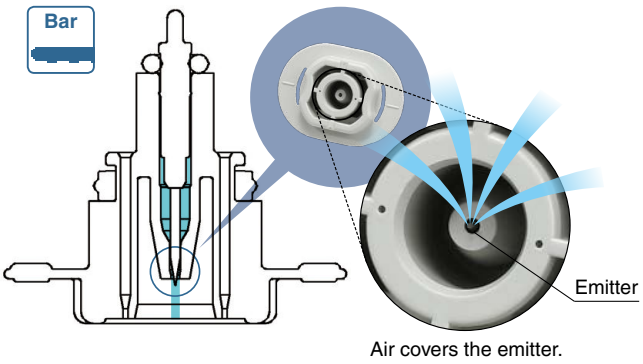
Nozzle



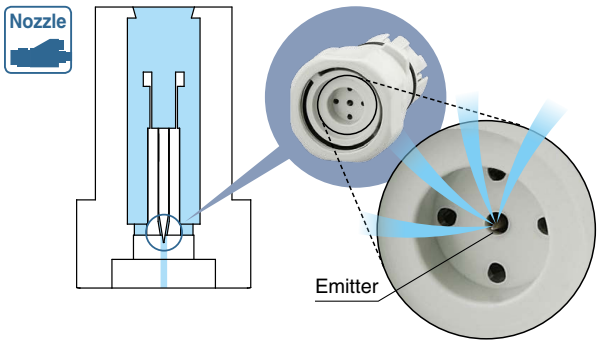
Various low maintenance cartridges can be selected according to the application.

Bar Nozzle

- **Minimizes the contamination of emitters by discharging compressed air at the surface of the emitters**



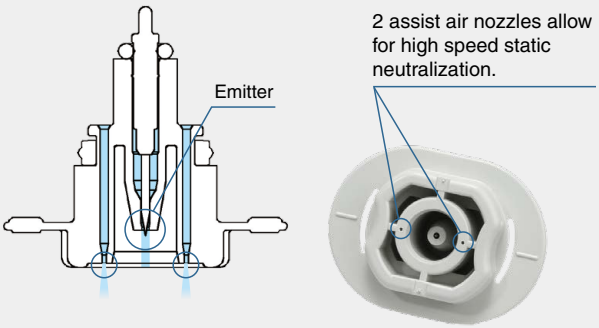
Air covers the emitter.

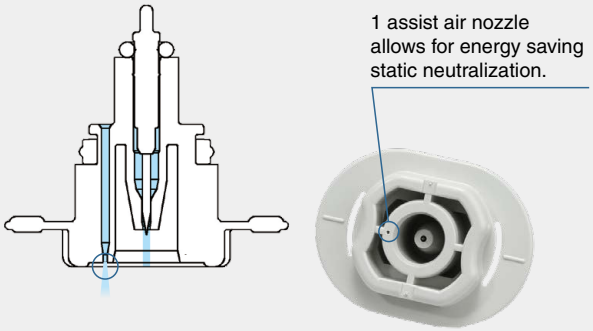


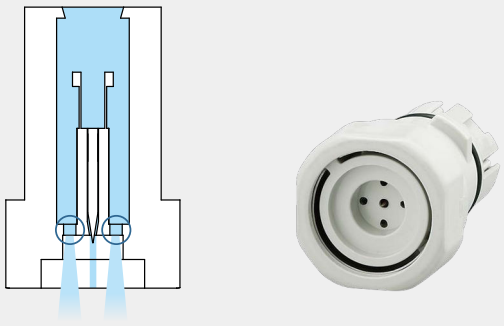
Air covers the emitter.

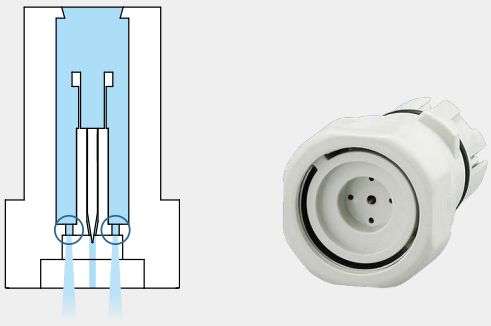
- **Emitter cartridge type**

	High speed static neutralization cartridge	Energy saving static neutralization cartridge
For Bar	**Long range static neutralization and dust removal** 1 cartridge equipped with 2 assist air nozzles allows for high speed static neutralization by transferring ionized air produced in the emitter to the workpiece.	**Short range static neutralization** Reducing the number of assist nozzles by half for static neutralization, which does not require a high volume of assist air due to the close distance to the object to be neutralized, allows for energy savings by reducing air consumption.
For Nozzle		









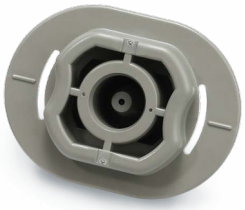
<For Nozzle> The external shape of the high speed static neutralization cartridge and that of the energy saving static neutralization cartridge is the same. However, as shown in the image above, the diameter of the holes differs.

Emitter material type

Tungsten/Single crystal silicon (for silicon wafers)

Bar

Tungsten
(Emitter cartridge color: White)



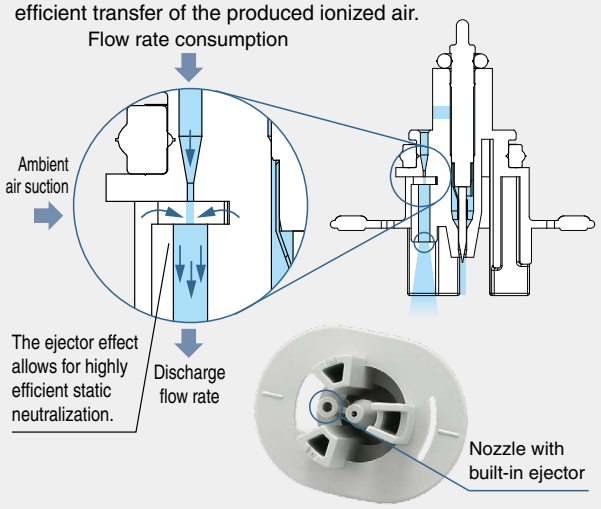
Silicon
(Emitter cartridge color: Gray)

Nozzle

Tungsten
(Emitter cartridge color: White)

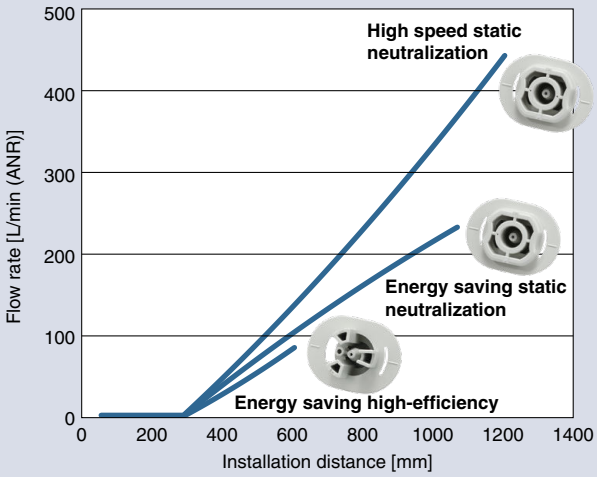
Energy saving high-efficiency cartridge

Assist air amplified by the sucking in of ambient air (the ejector effect) allows for highly efficient static neutralization through the efficient transfer of the produced ionized air.



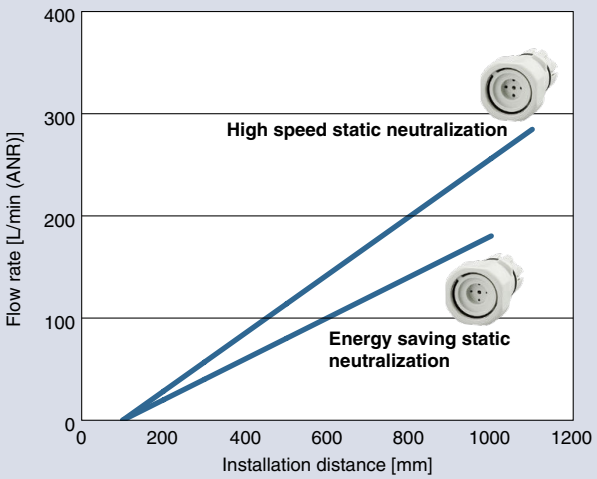
Flow rate for installation distance of each cartridge

Conditions: IZT41-112□ (Number of cartridges: 18 pcs.), Discharge time 1 s



Flow rate for installation distance of each cartridge

Discharge time 1 s



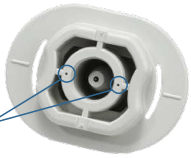
Air can be supplied by air piping on one side.

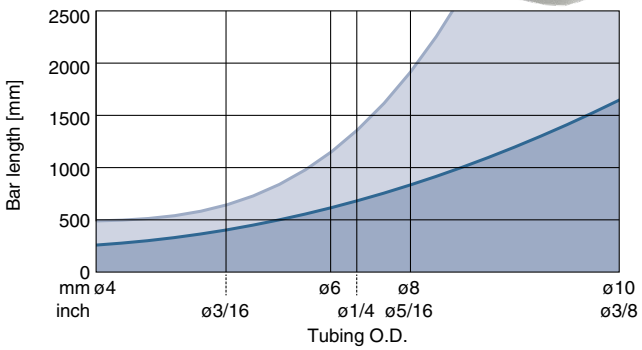
Bar

- **The optimal design of the piping port size allows for sufficient blow performance even with piping only on one side.**

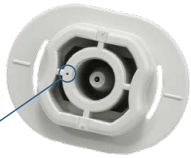
Piping on both sides
Piping only on one side

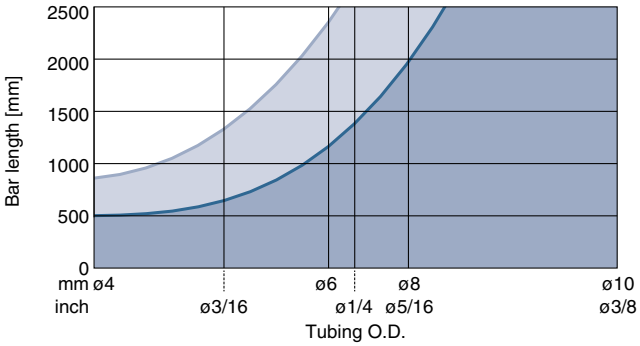
High speed static neutralization cartridge



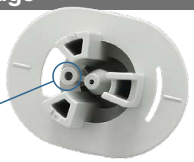


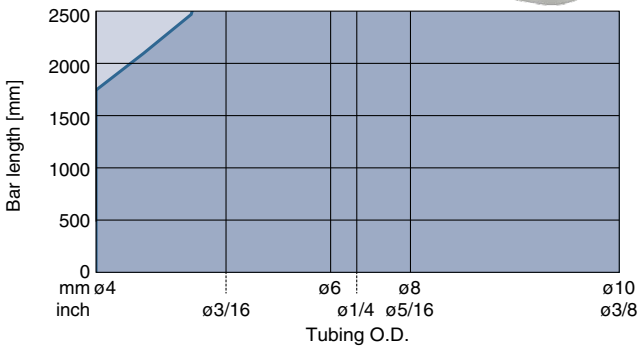
Energy saving static neutralization cartridge





Energy saving high-efficiency cartridge





Air supply port position is selectable: Right side/ Left side/Both sides

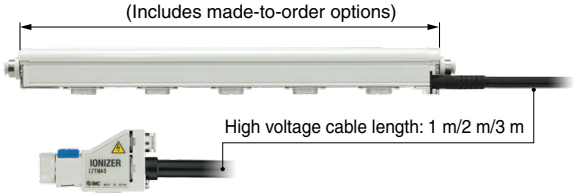
Bar

Bar and high voltage cable lengths are selectable.

Bar Nozzle

pp. 21, 25, 43

Bar length: Select a length in 60 mm increments from 160 to 2500 mm.
(Includes made-to-order options)



2 types of brackets are available.

Bar

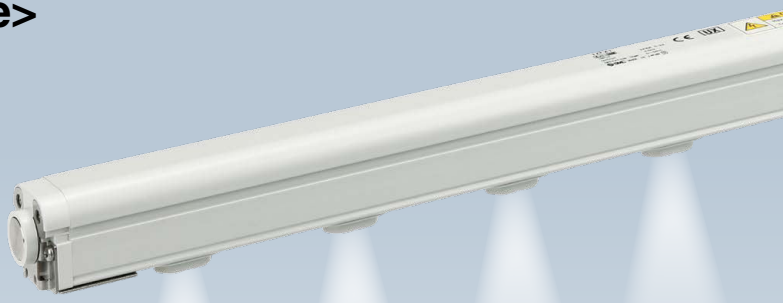
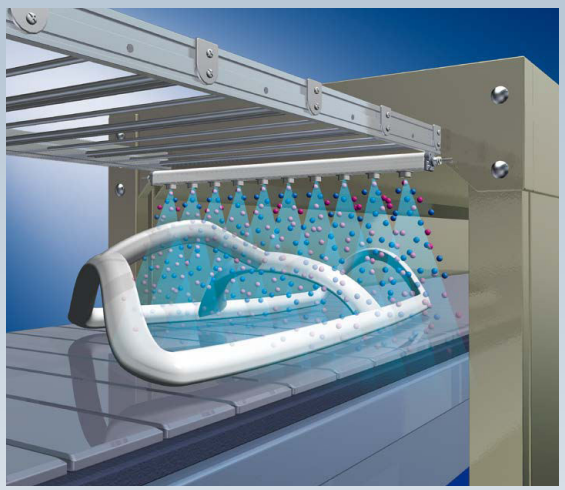
<Application Examples: Bar Type>

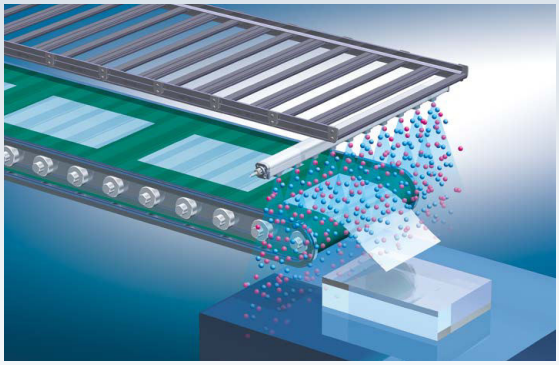


For the static neutralization of resin frames



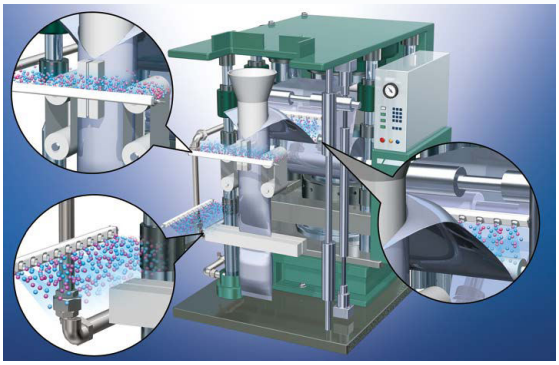
For the static neutralization of film-molded goods

- Prevents goods from adhering to the conveyer
- Prevents the dispersion of finished goods



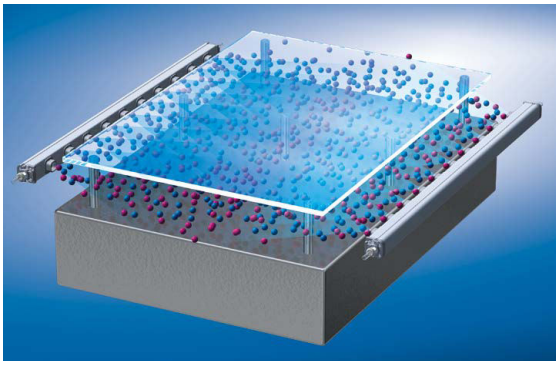
For the static neutralization of packing films

- Prevents the filled substances from adhering to packing films
- Reduces packing mistakes

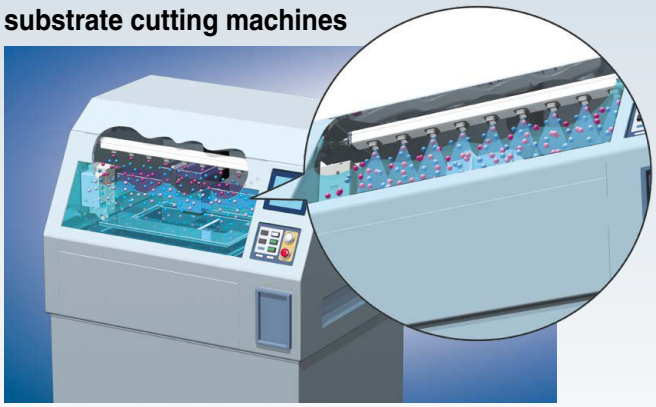


For the static neutralization of glass substrates

- Prevents the breakage of glass substrates by the static electricity generated when the substrate is lifted from the surface plate

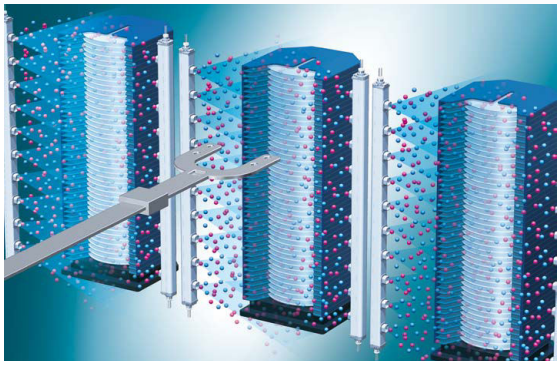


For the static neutralization of substrate cutting machines



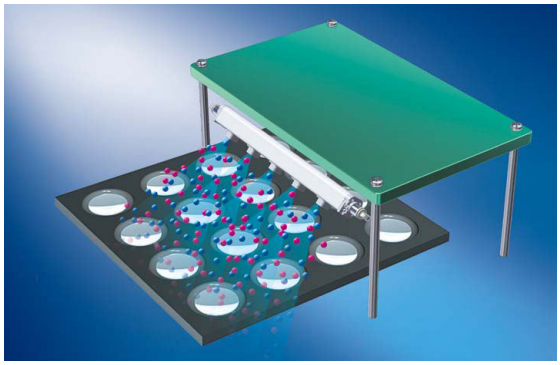
For the static neutralization during wafer transfer

- Prevents breakage due to discharge between wafers and hands



For the static neutralization of lenses

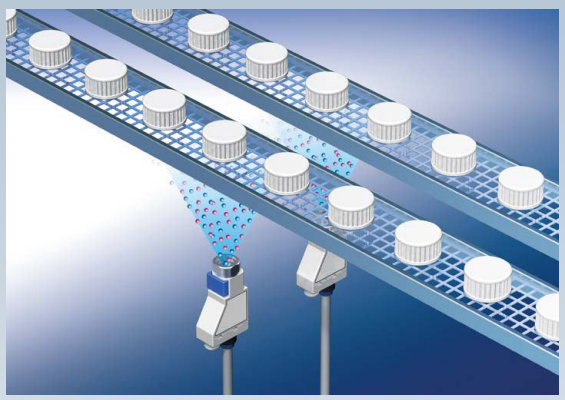
- Removes dust from lenses
- Prevents the adhesion of dust



<Application Examples: Nozzle Type>

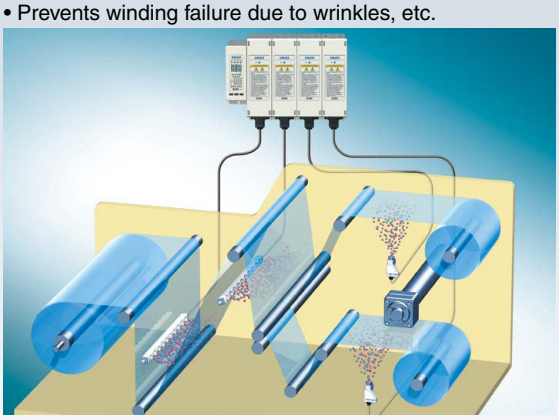
For the static neutralization of caps

• Removes dust from caps and prevents the adhesion of dust



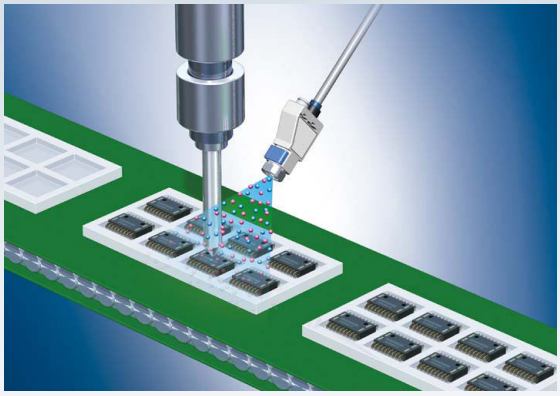
For the static neutralization of films

• Prevents the adhesion of dust
• Prevents winding failure due to wrinkles, etc.



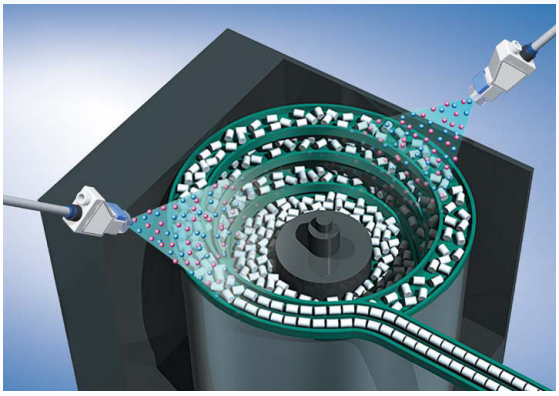
For spot type static neutralization

• Prevents the electrostatic breakdown of electric parts
• Prevents detachment failure



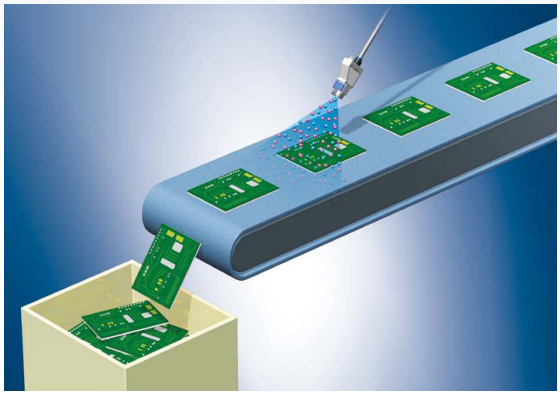
For the static neutralization of parts feeders

• Prevents the clogging of parts feeders



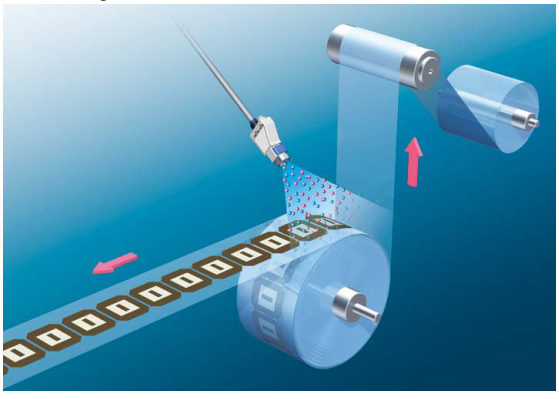
For the static neutralization of electric substrates

• Prevents the electrostatic breakdown of electric parts



For the removal of dust when detaching from film

• Removes dust generated by static electricity when detaching from film



For the prevention of punching press sticking

Static Neutralization Characteristics

* Static neutralization characteristics are based on data using a charged plate (dimensions: 150 mm x 150 mm, capacitance: 20 pF) as defined in the U.S. ANSI standards (ANSI/ESD STM3.1-2015). Use this data only as a guideline for model selection because the values vary depending on the material and/or size of the subject.

① Installation Distance and Discharge Time (Discharge Time from 1000 V to 100 V)

Specifications

Ionizer model		IZT40	IZT41 (NPN)	IZT41 (PNP)	IZT42 (NPN)	IZT42 (PNP)
Ion generation method		Corona discharge type				
Method of applying voltage		AC, DC*1	AC, DC*1		Dual AC	
Applied voltage		±7000 V			±6000 V	
Offset voltage*2		Within ±30 V				
Air purge	Fluid	Air (Clean dry air)				
	Operating pressure	0.5 MPa or less				
	Proof pressure	0.7 MPa				
	Connecting tube size (One side can be plugged)	Metric size: ø4, ø6, ø8, ø10 Inch size: ø3/16", ø1/4", ø5/16", ø3/8"				
Current consumption		0.7 A or less (+0.6 A or less per ionizer when connected)	0.8 A or less (+0.7 A or less per ionizer when connected)		1.4 A or less (+1.3 A or less per ionizer when connected)	
Power supply voltage		24 VDC ±10% (100 to 240 VAC: AC adapter option: Applicable when only one bar is used)				
Input signal	Ion generation stop signal	—	Connected to DC (–) Voltage range: 5 VDC or less Current consumption: 5 mA or less	Connected to DC (+) Voltage range: 19 VDC to power supply voltage Current consumption: 5 mA or less	Connected to DC (–) Voltage range: 5 VDC or less Current consumption: 5 mA or less	Connected to DC (+) Voltage range: 19 VDC to power supply voltage Current consumption: 5 mA or less
Output signal	Maintenance detection signal	—	Max. load current: 100 mA Residual voltage: 1 V or less (Load current at 100 mA) Max. applied voltage: 26.4 VDC	Max. load current: 100 mA Residual voltage: 1 V or less (Load current at 100 mA)	Max. load current: 100 mA Residual voltage: 1 V or less (Load current at 100 mA) Max. applied voltage: 26.4 VDC	Max. load current: 100 mA Residual voltage: 1 V or less (Load current at 100 mA)
	Error signal					
Function		High voltage abnormality detection (Ion generation stops when abnormality is detected)	Auto balance, Maintenance detection, High voltage abnormality detection (Ion generation stops when abnormality is detected), and Ion generation stop input			
Effective static neutralization distance		50 to 2000 mm				
Ambient and fluid temperatures	Controller, High voltage power supply module	0 to 40°C				
	Bar	0 to 50°C				
Ambient humidity		35 to 80% Rh (No condensation)				
Material	Controller	Cover: ABS, Aluminum, Switch: Silicone rubber				
	High voltage power supply module	Cover: ABS, Aluminum				
	Bar	Cover: ABS, Emitter cartridge: PBT, Emitter: Tungsten or Single crystal silicon, High voltage cable: Silicone rubber, PVC				
Standards/Directive		CE (EMC Directive)				

*1 Apply cathode or anode to DC.
*2 When the air purge is performed between a charged object and an ionizer at a distance of 300 mm

Technical Data

Static Neutralization Characteristics

＊ Static neutralization characteristics are based on data using a charged plate (dimensions: 150 mm x 150 mm, capacitance: 20 pF) as defined in the U.S. ANSI standards (ANSI/ESD STM3.1-2015). Use this data only as a guideline for model selection because the values vary depending on the material and/or size of the subject.

① Installation Distance and Discharge Time (Discharge Time from 1000 V to 100 V)

IZT43 AC Mode

For cartridges without air purge

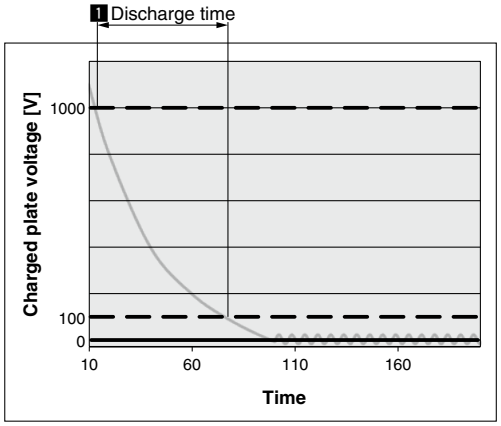
Glossary

1 Discharge Time

Time required for the voltage (attributed to static electric charge) attenuating from an initial value to the arbitrarily selected final value [JIS C 61340-4-7]
The graph shows the time required for the charged plate voltage being discharged from 1000 V to 100 V.



2 Offset Voltage

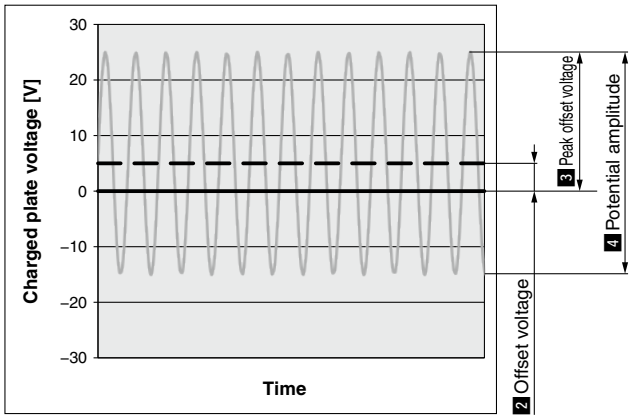
Voltage which can be measured from the insulated conductive charged plate mounted to the charged plate monitor in the ionized atmosphere [JIS C 61340-4-7]
This catalog shows the average offset voltage between 1 and 2 minutes after starting the measurement.

3 Peak Offset Voltage

The peak voltage of the pulse voltage type ionizer when considering the offset value of each polarity as an absolute value when the offset voltage fluctuates to the positive and negative side periodically, based on the periodical fluctuation of the ion output from positive to negative [JIS C 61340-4-7]

4 Potential Amplitude

The p-p voltage value is measured by the charged plate using the AC method in which positive and negative ion output fluctuates periodically. [SMC technical term]
The voltage is measured between 1 and 2 minutes after starting the measurement, and the difference between the maximum and minimum values is indicated.



IZT40/41/42/43 Series
Specific Product Precautions 1

Be sure to read this before handling the products.
Refer to the back cover for safety instructions.

Selection

⚠Warning

1. This product is intended to be used with general factory automation (FA) equipment.

- If considering using the product for other applications (especially those indicated in Warning (4) on the back cover), please consult with SMC beforehand.

2. Use this product within the specified voltage and temperature range.

- Using outside of the specified voltage can cause a malfunction, damage, electrical shock, or fire.

3. Use clean compressed air as fluid. (Compressed air quality of Class 2.4.3., 2.5.3., 2.6.3 or higher according to ISO 8573-1:2010 (JIS B 8392-1:2012) is recommended for operation.)

- This product is not explosion proof. Never use a flammable gas or an explosive gas as a fluid and never use this product in the presence of such gases.
- Please contact us when fluids other than compressed air are used.

4. This product is not explosion-protected.

- Never use this product in locations where the explosion of dust is likely to occur or flammable or explosive gases are used. This can cause a fire.

⚠Caution

1. Clean specification is not available with this product.

- A minute amount of particles are generated due to wearing of the emitters while the product is operating.
- When bringing into a clean room, confirm the required cleanliness before use.

Mounting

⚠Warning

1. Reserve enough space for maintenance, piping, and wiring.

- Please take into consideration that the connector connecting part, plug connecting part, and One-touch fittings for supplying air need enough space for the cable and air tubing to be easily attached/detached.
- To avoid unreasonable stress applied to the connector mounting part, plug connecting part, and One-touch fitting mounting part, bending of the cable or air tubing should be more than the minimum bending radius.
- If the cable is bent in an acute angle or load is applied to the cable repeatedly, it may cause a malfunction, wire damage or fire.

[Minimum bending radius] Power supply cable: 40 mm
Separate cable (Option): 40 mm
High voltage cable: 30 mm

∗ Shown above is wiring with the fixed minimum allowable bending radius and at a temperature of 20°C. A bend radius should be larger at a temperature lower than 20°C. Regarding the minimum bending radius of the air tubing, refer to the operation manual or catalog for air tubing.

2. Installation of the high voltage cable

- Use the specified cable holder (IZT40-E1 or IZT40-E2) for installing high voltage cables.
- Follow the instructions below when installing high voltage cables. If these are not followed, the insulation performance of the high voltage cable will decrease, causing failure of the ionizer, which may lead to electrical shock or fire.
  a. Do not cut the cable.
  b. Keep to the minimum bending radius of the cable.
  c. Do not tighten the cable too much with cable ties. Do not deform the cable by placing any object on the cable.
  d. Avoid the problems of cable runaway such as in a cable duct.
  e. Do not twist or damage the cable. If the cable is damaged, it should be replaced.

Specific Product Precautions 2

Be sure to read this before handling the products.
Refer to the back cover for safety instructions.

Mounting

⚠Warning

3. Fix the high voltage cable connector using 2 screws included as an accessory.
- Fix the connector using 2 cross recessed round head screws (M4 x 10 L) with the specified tightening torque. (Refer to the table below.)

4. Be sure to fix the high voltage cable plug with a screw.

5. Mount on a flat surface and do not apply impact load or excessive external force.
- If there are irregularities, cracks or height differences, excessive stress will be applied to the housing or brackets, resulting in damage or other trouble.
- Do not drop or apply a strong shock. Otherwise, damage or an accident can occur.

6. Install the product so that the bar does not have an excessive deflection.
- For a bar length of 820 mm or more, be sure to support the bar at both ends and in the middle by using brackets (IZT40-BM1 or IZT40-BM2). If the bar is held only at the both ends, self-weight of the bar causes deflection, resulting in damage or deformation of the bar.

7. Avoid using in a place where noise (electromagnetic wave surge) is generated.
- If the product is used in an environment where noise is generated, it may lead to a malfunction and deterioration or damage of the internal elements.
- If the presence of noise is suspected, take preventative measures against noise and avoid crossing wires such as power line and high voltage line.

8. Tighten screws with the specified tightening torque.
- If the mounting screws are tightened in excess of the specified torque range, it may damage the screws or mounted areas.
- If the tightening torque is insufficient, the screws may become loose. (Refer to the table below.)

9. Do not touch the emitter directly with fingers or metallic tools.
- Do not touch the emitter with your finger. If the needle sticks to your finger, an electrical shock can cause an instantaneous rapid body motion to escape from the shock, causing injury.
- If the emitter or cartridge is damaged with a tool, the specification will not be met and damage and/or an accident may occur.

⚠Danger High Voltage

The emitter carries a high voltage. If foreign matter is inserted or there is human contact with the emitter, an electrical shock, or an instantaneous body reaction to escape from the shock, can cause injury.

IZT40/41/42/43 Series
Specific Product Precautions 3

Be sure to read this before handling the products.
Refer to the back cover for safety instructions.

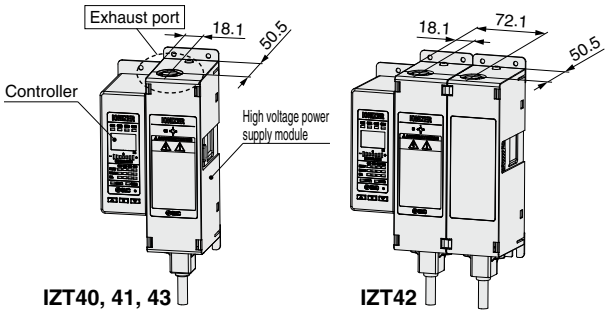
Mounting

⚠ Warning

10. Do not affix any tape or seals to the controller, high voltage power supply module, bar, and nozzle.
- If the tape or label contains a conductive adhesive or reflective paint, a dielectric phenomenon may occur due to ions arising from such substances, resulting in electrostatic charging or electric leakage, causing a malfunction, damage, electric shock or fire.

11. Installation should be conducted after turning off the power supply and air supply to the controller, high voltage power supply module, bar, and nozzle.
- If installation or adjustment is performed power or air supplied, electric shock, failure or injury can result.

12. The high voltage power supply module uses a fan. A space of 20 mm or more is required from the exhaust port for ventilation. Install the product in a ventilated location so peripheral devices are not affected.

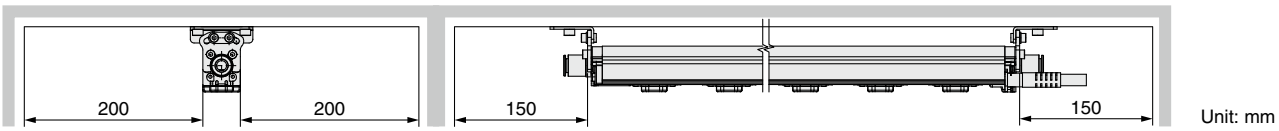


13. Do not apply any excessive force to cables, such as repeated bending, tensioning, or placing a heavy object on the cables.
- It may cause an electric shock, fire, or the breaking of a wire.

14. Do not carry the product by holding its cables.
- It may cause an injury or damage to the product.

⚠ Caution

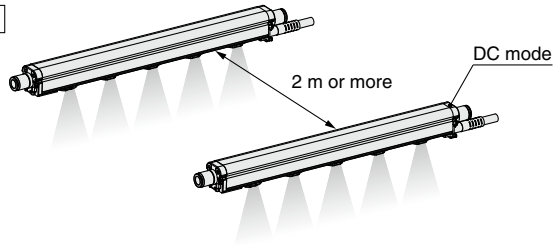
1. When the IZT40, IZT41, IZT42, or IZT43 series is installed, maintain a space from structures or components.
- If there are electrically conductive objects such as walls or structures close to the bar, generated ions may not reach the target object effectively or product failure or electric shock can result due to dielectric or short-circuit.



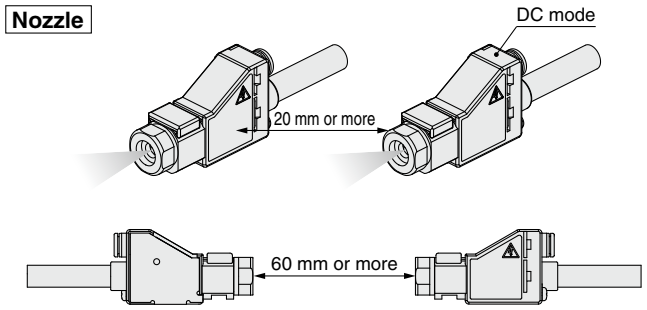
2. Make sure to confirm the effect of static neutralization after installation.
- The performance of the product varies depending on the surrounding installation and operating conditions. After installation, verify the effects of static neutralization.

3. When installing the IZT41, IZT42, or IZT43 in proximity with an ionizer which operates in DC mode (one polarity, positive or negative), they should be positioned at least 2 meters away from each other.
- When using the AC mode of the IZT41, IZT42, or IZT43 near the ionizer in DC mode, keep clearance of at least the length shown in the figure below between them. The offset voltage (ion balance) may not be adjusted by the built-in sensor due to the ions discharged from the DC mode ionizer.

Bar



Nozzle



4. Use the specified bracket.

IZT40/41/42/43 Series
Specific Product Precautions 4

Be sure to read this before handling the products.
Refer to the back cover for safety instructions.

Wiring / Piping

⚠ Warning

1. **Before wiring, ensure that the power supply capacity is larger than the specification and that the voltage is within the specification. Product damage or malfunction can result.**
2. **To maintain product performance, the power supply shall be UL listed Class 2 certified by National Electric Code (NEC) or evaluated as a limited power source provided by UL60950.**
3. **To maintain the product performance, ground the product with an earth ground cable with a resistance of 100 Ω or less. If the product is not grounded, it is not possible to secure the performance and may lead to product failure or malfunction.**
4. **Wiring (including insertion and removal of the connector plug (high voltage cable connector, high voltage cable plug)) should never be carried out with the power supply ON. Otherwise, an electrical shock or accident may occur.**
5. **Use the specified cable for connecting the ionizer controller, high voltage power supply module, bar, and nozzle. Do not disassemble or retrofit. Modifying the product may cause accidents such as electric shock, failure or fire. The product will not be guaranteed if it is disassembled and/or modified.**
6. **Ensure the safety of wiring and surrounding conditions before supplying power.**
7. **Do not connect or disconnect the connector plug (including power source) while the power is supplied. Failure to follow this procedure may cause product malfunction.**
8. **If the ionizer wiring and high power lines are routed together, this product may malfunction due to noise. Therefore, use a separate wiring route for this product.**
9. **Confirm that the wiring is correct before operation. Incorrect wiring will lead to product damage or malfunction.**
10. **Flush the piping before use. Before piping this product, exercise caution to prevent particles, water drops, or oil contents from entering the piping.**

Operating Environment / Storage Environment

⚠ Warning

1. **Observe the fluid temperature and ambient temperature range.**
   - Fluid temperature and ambient temperature ranges are; 0 to 40°C for controller, 0 to 40°C for high voltage power supply module, 0 to 50°C for bar, 0 to 40°C for nozzle, and 0 to 40°C for AC adapter.
   - Do not use the product in locations where the temperature may change suddenly even if the ambient temperature range is within the specified limits, resulting in condensation.

Operating Environment / Storage Environment

⚠ Warning

2. **Do not use this product in an enclosed space.**
   - This product utilizes a corona discharge phenomenon. Avoid using in an enclosed space as ozone and nitrogen oxides exist in such places, even though in marginal quantities.
3. **Environments to avoid**
   - Never use or store under the following conditions. These may cause a failure, fire, etc.
     a. Environments where the ambient temperature is outside of the product specification
     b. Environments where the ambient humidity is outside of the product specification
     c. Environments where abrupt temperature changes may cause condensation
     d. Environments where corrosive gas, flammable gas or other volatile flammable substances are stored
     e. Environments where the product may be exposed to conductive powder such as iron powder or dust, oil mist, salt, organic solvent, machining chips, particles or cutting oil (including water and any liquids), etc.
     f. Environments where ventilated air from an air conditioner is directly applied to the product
     g. Enclosed or poorly ventilated environments
     h. Environments that are exposed to direct sunlight or heat radiation
     i. Environments where strong electromagnetic noise is generated, such as strong electrical and magnetic fields or supply voltage spikes
     j. Environments where static electricity is generated
     k. Environments where a strong high frequency occurs
     l. Environments that are subject to potential lightning strikes
     m. Environments where the product may receive direct impact or vibration
     n. Environments where the product may be subjected to forces or weight that could cause physical deformation
4. **Do not use an air containing mist or dust.**
   - The air containing mist or dust will cause the performance to decrease and shorten the maintenance cycle.
   - Install an air dryer (IDF series), air filter (AF/AFF series), and/or mist separator (AFM/AM series) to obtain clean compressed air (compressed air quality of Class 2.4.3., 2.5.3., 2.6.3 or higher according to ISO 8573-1:2010 (JIS B 8392-1:2012) is recommended for operation).
5. **Controller, high voltage power supply module, bar, nozzle, and AC adapter are not resistant to lightening surge.**
6. **Effects on implantable medical devices**
   - The electromagnetic waves emitted from this product may interfere with implantable medical devices such as cardiac pacemakers and cardioverter defibrillators, resulting in the malfunction of the medical device or other adverse effects.
   - Please use extreme caution when operating equipment which may have an adverse effect on your implantable medical device. Be sure to thoroughly read the precautions stated in the catalog, operation manual, etc., of your implantable medical device, or contact the manufacturer directly for further details on what types of equipment need to be avoided.

IZT40/41/42/43 Series
Specific Product Precautions 5

Be sure to read this before handling the products.
Refer to the back cover for safety instructions.

Maintenance

⚠ Warning

1. Periodically inspect the ionizer and clean the emitters.

- Check regularly if the product is operating with undetected failures or not.
- The maintenance must be performed by an operator who has sufficient knowledge and experience.
- If the product is used for an extended period with dust present on the emitters, the product performance will be reduced.
- An emitter dirt detection function is available with the IZT41, IZT42, and IZT43. When emitter contamination is detected, clean the emitter.
- In cases where the emitter dirt detection function is not used on the IZT41, IZT42, or IZT43, or when the IZT40 is used, perform a neutralizing performance test and set a maintenance cycle for periodic cleaning.
- The emitter contamination level is different depending on the installation environment and supply pressure.
- If the performance is not recovered after cleaning, it is possible that emitters are worn. Replace the emitter cartridge.

⚠ Danger High Voltage

This product contains a high voltage generation circuit. When performing maintenance inspection, be sure to confirm that the power supply to the ionizer is turned off. Never disassemble or modify the ionizer, as this may not only impair the product's functionality but could cause an electric shock or electric leakage.

2. When cleaning the emitter or replacing the emitter cartridge, be sure to turn off the power supply or air supply to the controller, high voltage power supply module, bar, and nozzle.

- Never touch the emitters with the power supplied to the controller, high voltage power supply module, bar, and nozzle. Electric shock may cause injury.
- If an attempt to replace the emitter cartridges is performed before removing air supply, the emitter cartridges may eject unexpectedly due to presence of the compressed air. Remove supply air before replacing the cartridges.
- If emitter cartridges are not securely mounted to the bar, they may eject or release when air is supplied to the product.
- Securely mount or remove the emitter cartridges referencing the instructions shown to the right.
- Securely mount or remove the emitter cartridges with hands and do not use tools.

  Bar type
  Emitter cartridge tightening torque: 0.2 to 0.3 N·m
  Nozzle type
  Emitter cartridge tightening torque: 0.1 to 0.2 N·m

Bar

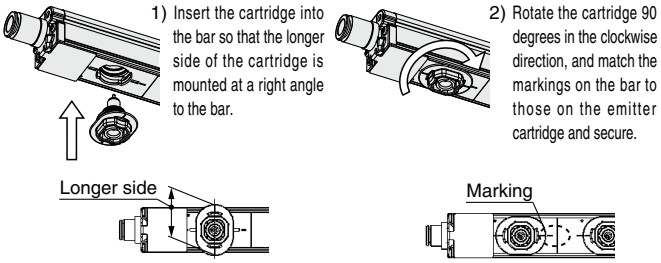
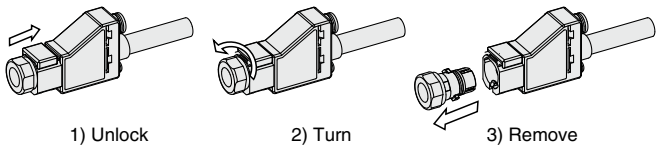
Mounting of emitter cartridge

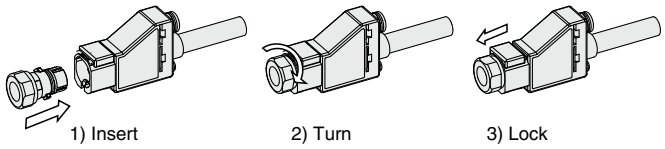


Nozzle

Removal of emitter cartridge



Mounting of emitter cartridge



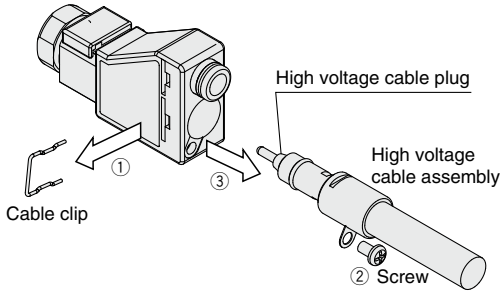
3. Do not disassemble or modify the product.

- Disassembling or modifying the product may cause accidents such as electric shock, failure or fire.
- The product will not be guaranteed if it is disassembled and/or modified.

4. Do not operate the product with wet hands.

- Never operate the product with wet hands. It may cause electric shock or other accidents.

5. When replacing the high voltage cable for the nozzle, be sure to turn off the power supply or air supply to the controller, high voltage power supply module, and nozzle.



Specific Product Precautions 6

Be sure to read this before handling the products.
Refer to the back cover for safety instructions.

Handling

⚠ Caution

1. Do not apply excessive external force or impact (100 m/s² or more).
- Even though the controller, high voltage power supply module, bar, and nozzle do not appear to be damaged, the internal parts may be damaged and cause a malfunction.

2. If the bar length exceeds 820 mm, hold both ends and the middle of the bar to avoid a moment load being applied.
- Handling the product by holding either end of the bar may cause deformation or damage of the product.

3. The power cable must be connected and disconnected by hand.
- The use of tools can result in damage to the product.
- Hold the connector by hand and pull it out straight.
- If the connector has a lock mechanism, release the lock and then pull out the connector.

4. If smoking, fire, or foul smell occurs in the product, immediately shut off the power supply.

5. Do not touch part A of the high voltage connector and part B of the high voltage cable plug by hand. Be careful that moisture or foreign matter does not adhere to the connector and plug.
- Do not touch part A of the high voltage connector and part B of the high voltage cable plug while handling.
- Keep the high voltage connector and high voltage cable plug free from contamination. Adhesion of moisture, oil, or foreign matter on part A and part B may cause high-voltage electric leakage.
- If moisture, oil, or foreign matter adheres to part A or part B, clean it with ethanol.

⚠ Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of **"Caution," "Warning"** or **"Danger."** They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)*1), and other safety regulations.

⚠ Caution: **Caution** indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

⚠ Warning: **Warning** indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

⚠ Danger : **Danger** indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

*1) ISO 4414: Pneumatic fluid power – General rules relating to systems.
ISO 4413: Hydraulic fluid power – General rules relating to systems.
IEC 60204-1: Safety of machinery – Electrical equipment of machines.
(Part 1: General requirements)
ISO 10218-1: Manipulating industrial robots – Safety.
etc.

⚠ Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

3. Do not service or attempt to remove product and machinery/ equipment until safety is confirmed.

1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.

1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
3. An application which could have negative effects on people, property, or animals requiring special safety analysis.
4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

⚠ Caution

1. The product is provided for use in manufacturing industries.

The product herein described is basically provided for peaceful use in manufacturing industries.
If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary.
If anything is unclear, contact your nearest sales branch.

Limited warranty and Disclaimer/ Compliance Requirements

The product used is subject to the following "Limited warranty and Disclaimer" and "Compliance Requirements".
Read and accept them before using the product.

Limited warranty and Disclaimer

1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.*2)
   Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided.
   This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.

*2) **Vacuum pads are excluded from this 1 year warranty.**
A vacuum pad is a consumable part, so it is warranted for a year after it is delivered.
Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

Compliance Requirements

1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

⚠ Caution

SMC products are not intended for use as instruments for legal metrology.

Measurement instruments that SMC manufactures or sells have not been qualified by type approval tests relevant to the metrology (measurement) laws of each country. Therefore, SMC products cannot be used for business or certification ordained by the metrology (measurement) laws of each country.

Revision History

Edition B
* The energy saving high-efficiency cartridge has been added.
* The contents of the technical data have been revised.
* The weight of the high voltage power supply module has been changed.
* Information on the effects on implantable medical devices has been added to the specific product precautions.
* Number of pages has been increased from 40 to 44. YQ

Edition C
* The nozzle type, IZT43 series has been added.
* Number of pages has been increased from 44 to 64. YU

⚠ Safety Instructions	Be sure to read the "Handling Precautions for SMC Products" (M-E03-3) and "Operation Manual" before use.
